

Open Payments and Pre-Paid Products in Transit

Wendy Humphrey
Vice President, Business Development

March 2010

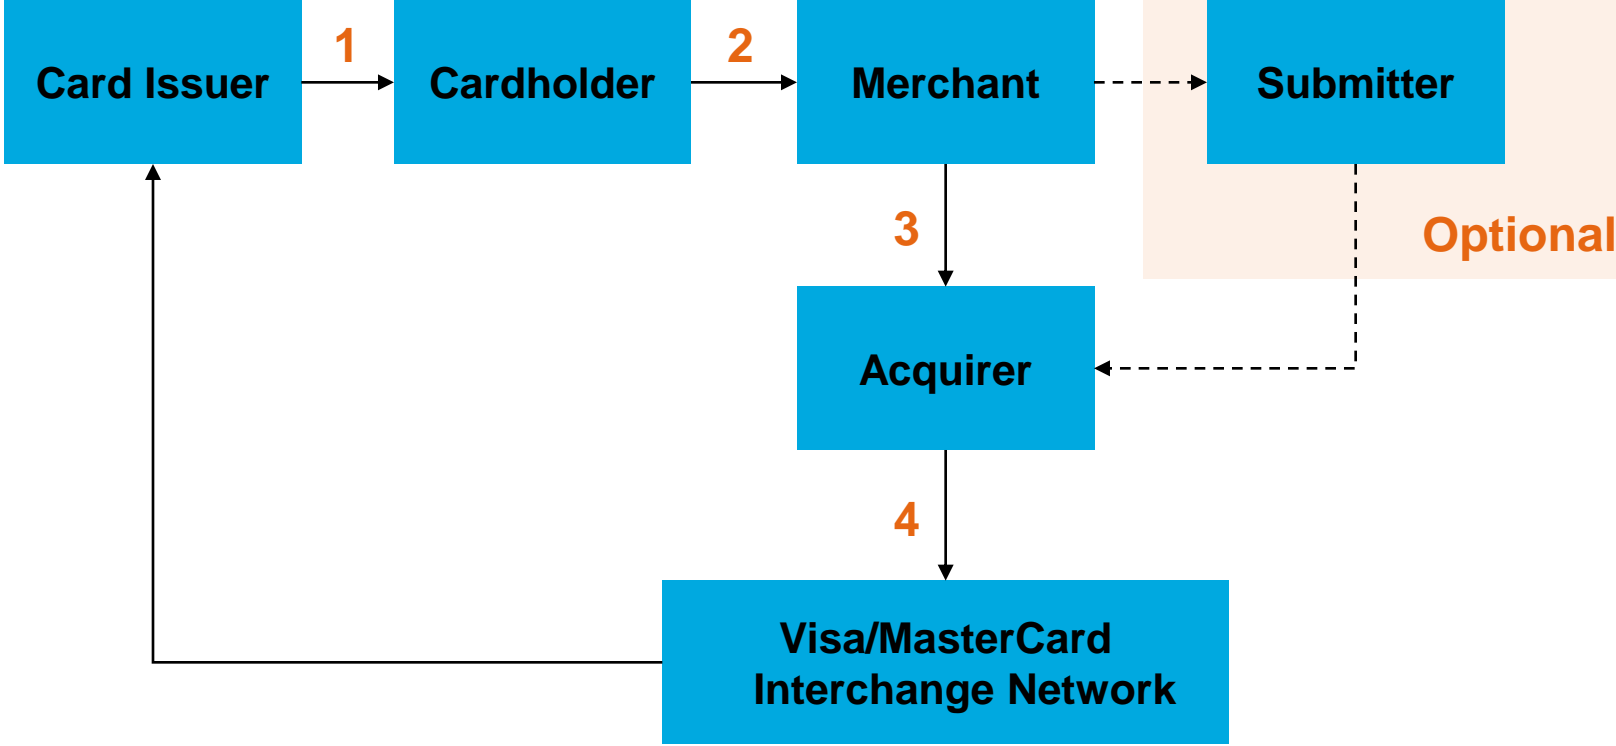

Types of Bank Cards

Credit card- A bankcard where there is an arrangement or agreement in which any domestic lender or credit card bank, whether directly or indirectly through any domestic lender acting as its agent, gives a debtor the privilege of using a credit card out of which debt arises.

Debit card- A bankcard used to make an electronic withdrawal from funds on deposit in a bank, as in purchasing goods or obtaining cash advances.

Pre-Paid- A payment card that provides access to a prepaid value, rather than a line of credit. The card is used until the value is gone and the card is discarded or **reloaded**.

Putting the Pieces Together

Credit Card Acceptance Costs

Interchange fees are charged by the merchant's acquirer to a card-accepting merchant.

The majority of the interchange fee, goes to the issuing bank, but parts of it go to the processing network, the card association and the merchant's acquirer.

Interchange fees are based on

- Merchant type and average ticket dollar amount
- Whether the cards are physically present
- If the card's magnetic stripe is read or if the transaction is hand-keyed
- Type of card (reward, corporate, etc.)
- Time and amount of settlement
- Other factors

General Purpose Reloadable Cards¹

General purpose reloadable (GPR) cards are prepaid cards that are purchased by a consumer to be used as the consumer chooses and that can have funds added to the card. The cards can be used anywhere the designated payment brand is accepted or used for specific purposes.

General Purpose
Reloadable Cards

- High growth opportunity for you
- Fills needs of large “Underbanked” market
- Drives foot traffic to reload funds

Large “Underbanked” Market Driving Growth in GPR Cards

Underbanked Percentage of U.S. Adult Population*

Over 100 million Underbanked consumers are looking for alternative financial services at a fair price delivered by people they trust = large revenue opportunity

Reloads on GPR cards are expected to reach approximately \$14 B by 2011.

Prepaid Program Roles

Traditional Prepaid Program

Program Manager

- Develops alliances with strategic partnerships
- Collects and distributes funds
- Creates and manages brand image
- Develops business plan and marketing strategy
- Sets pricing and fees

Processor

- Transaction processing (authorization/settlement)
- PCI compliance
- Customer service (IVR, Web, agent, etc.)
- Relationship with payment brands

Issuer

- Owns card program
- Complies with federal and state regulations
- Relationship with payment brands

Payment Brands

- Regulatory oversight
- Reviews and approves card program
- Clearing system (settle transactions/interchange)

Others

- Government (federal and local) entities, card vendors, telecoms, etc.

Open vs. Closed Prepaid

Open System provides greater flexibility, but adds program management responsibilities

“Closed Loop” Proprietary System	“Open Loop” Prepaid Accounts
No bank involved	Bank-issued - Visa, MasterCard branded; legal terms with card
Fare Transactions only supported in programmed terminals & in proprietary system	Fare transactions route through standard credit/debit systems
No legal terms and conditions required to be disseminated with card	Signature debit BINs; legal terms disseminated with card
No association compliance required	Cards comply w/FDIC banking, Treasury Dept. and association regulations
Funds loaded on cards remain with transit authority	Funds loaded on cards reside at issuing bank
Funds settlement required only for third-party resellers and reloaders of fare cards	Funds settlement for card loads performed between seller (agency), processor and issuing bank
Transit authority creates rules specific to their program; no third-party approvals	Program attributes and structure must be approved by bank and by association
Cards are anonymous, and transactional data belongs to transit authority	Cardholder transactional data is property of bank – falls under Graham Leach Bliley rules

Open Loop Contactless Card - Restricted

Permanent, association-aligned (branded/not branded) open loop contactless card used for transit transactions; limited acceptance & limited reloads

- **Purchase Method:** Agency selected retail outlets & vending machines; online through agency or program website
- **Reload Methods:** Reloaded online; at agency selected retail outlets & vending machines
- **Registration:** Registration required only to support lost/stolen replacements; no mandatory SSN or DOB information required
- **Card Usage & Transactions supported:** Transactions limited to Transit SIC and can be restricted down to specific Transit providers identified.
- **Funds Settlement:** Load transactions settled by program manager between agency and issuing bank; transit transactions settled through standard acquiring & network processes (like credit & debit)
- **Additional Features:** Limited feature set, as this card application is designated for Transit only
- **Considerations:** Doesn't provide "lifestyle product" that unrestricted does; easy customer experience that mimics existing agency product

Open Loop Contactless Card - Unrestricted

Permanent, association-branded open loop contactless card initially used for transit transactions and then upgraded to fully-functional Visa/MC Debit product

- **Purchase Method:** Agency selected retail outlets & vending machines; online through agency or program;
- **Reload Methods:** Requires registration before card can be reloaded multiple times. Once registered, reloadable at agency outlets & vending machines and online; any reload location supported by program network
- **Registration:** Personal information must be validated, adherence to Know Your Customer, Anti Money Laundering, etc. regulations.
- **Card Usage & Transactions supported:** Card can be used at any Visa/MC merchant
- **Funds Settlement:** Load transactions settled by program between agency and issuing bank; transit transactions settled through standard acquiring & network processes (like credit & debit)
- **Additional Features:** Payroll direct deposit, online bill payment, 'use anywhere' like a debit card
- **Considerations:** Some riders may not pass required identity validation; once upgraded ,terms limit agency visibility into overall card usage; association branding on card could be confusing if card not upgraded; communicating broad range of features & supporting information about enrollment requires marketing support

Open Payments

Open Payments Concept

- Open Payments requires acceptance of all contactless bank cards
- Ensure hardware and AFC system is compliant to bankcard standards
- Identify local bank partners for debit and credit solutions
- Procure a prepaid program to address needs of the unbanked

AFC providers and system integrators are necessary

- Banking institutions typically do not provide point-of-sale (POS) systems for merchants; analogous to AFC systems in the transit industry
- AFC providers have experience and skills managing fare tables, products

AFC System Transition

- AFC system expands functionality to accommodate support for Open Payments
 - Centralized calculation of distance-based fares
 - No ability to store transit entry points or transfers on Open Payments media
 - Code to industry standard payment messaging specs
 - Proprietary direct messaging with program for Loads, Reloads, and Balance Inquiries
 - Modification of bus fare-boxes for reload
 - Vending machine modification or replacement to handle card disbursement and reload of Open Payments media
 - The Associations require issuing a magstripe card along with the “companion” contactless media
 - Coordination of customer service between agency and pre-paid provider

Agency Distribution

Ticket vending

- Necessary for convenience and cost reduction
- Form factors
 - Contactless sticker
 - Contactless card

Agency website

Agency distribution network

Sell and reload cards at customer service centers

- Integrated into existing solutions with an API
- POS terminals

Third-Party Distribution

Third-Party Distribution

- *Companies that provide cards and connectivity to merchants for selling others' cards.*
- *Program distribution partners:*
 - Examples: Blackhawk, Incomm (7-Eleven), CoinStar

Pre-Paid Card Sales & Reloads outside of agency

- **Third Party Distributors (TPDs):** Aggregator sales at retail (InComm, etc.); additionally FDC has relationships today with more than a dozen bulk B2B resellers offering card products into corporate environments and to other resellers (ex. Great Lakes Scrips)
- **Connectivity:** Leveraging connectivity to access prepaid processing platforms
- **Standalone terminals:** placing dedicated terminals at retail locations enabling loads, reloads, and balance inquiries
- **Kiosk Reloads:** partnering with financial services kiosk providers (ex. Coinstar) to offer card reloads at participating kiosk locations
- **Money Transmitters:** Offers prepaid card reloads through Western Union and MoneyGram locations
- **Payroll Direct Deposit:** ACH information provided to cardholder for direct deposit option
- **Future state:** mobile reloading through e-wallet on mobile handset

Open Payment Advantages

- 1** No custom development required at faregates/farebox; will transact identically to any other credit or debit card through merchant acquirer
- 2** All Open Payments fares will settle through same merchant acquiring settlement process as other bankcard payments
- 3** Consolidated reporting provided by merchant acquirer will contain all bankcard transactions (credit/ debit/ prepaid)
- 4** Open Payments and Open Loop Prepaid provide agency with payment processing flexibility and portability

Summary

- Bankcard acceptance benefits patrons, agencies and industry.
- Solutions require team work
 - Merchant acquirer
 - Integrator/AFC Provider
 - Pre-Paid Program Manager issuer
 - Agency

Thank You
