AMERICAN TRANSIT ASSOCIATION

*Annual Summary of Basic Data and Trends
in the Transit Industry of the United States*

1963 EDITION

FILE COPY

THIS IS THE TWENTY-FIRST annual edition of the Transit Fact Book compiled by the Statistical department of the American Transit Association. It is identified as the 1963 edition and covers the operations of the industry through the year 1962 with the latest plant and equipment data as of December 31, 1962. The figures given are in all cases totals for the whole transit industry of Continental United States up to and including 1959 and the entire U.S. (50 states) for 1960 and thereafter. The increased coverage has little or no effect on the historical trend tables contained herein, but revised data for the earlier years on the expanded coverage are available on request.

The transit industry herein represented comprises all organized local passenger transportation agencies except taxicab and suburban railroads, sightseeing buses and school buses. Included are (1) local motor bus lines, (2) electric street railways, (3) elevated and subways lines, (4) inter-urban electric railways, and (5) trolley coach lines.

The primary sources of the data herein developed are the financial and statistical reports received by the American Transit Association from transit companies representing more than 85 per cent of the transit industry.

Any differences between figures reported for 1961 and earlier years as shown in this issue of the Fact Book as compared with data published in earlier editions are the result of adjustments necessary to take into account additional information received subsequent to the issuance of the earlier editions of the Fact Book.

DISTRIBUTION BY POPULATION GROUPS

The several tables in which industry totals have been distributed by population groups are based upon the 1960 U.S. Census of Population beginning with the 1962 edition of the Fact Book. The 1950 U.S. Census of population data were used in the preceding issues of the Fact Book.
