

October 17, 2019

The Honorable Mitch McConnell  
Majority Leader  
U.S. Senate  
Washington, D.C. 20510

Dear Leader McConnell:

The Senate Environment and Public Works (EPW) Committee's America's Transportation Infrastructure Act (ATIA), S. 2302, provides a rare opportunity to benefit all states and continue the nation's longest economic expansion in history. While the EPW Committee has unanimously approved a critical federal infrastructure initiative, it is up to the rest of the Senate to take the next steps.

We applaud EPW Committee Chairman Barrasso, Ranking Member Carper and all committee members for proactively moving forward with a reauthorization of the federal highway program more than a year before it expires. History has demonstrated that delaying action on such measures until their deadline leads to two outcomes: short-term extensions; and disruption of state highway improvement plans.

The ATIA is not only timely, but it would also deliver meaningful enhancement to the nation's highway and bridge infrastructure network. It would provide historic investment levels, deliver beneficial projects faster by cutting red tape, tap private sector capital and innovations, prioritize safety, and improve the quality of life for rural and urban communities. The ATIA is an important foundation to begin addressing the critical need to modernize America's infrastructure.

The ATIA earned unanimous endorsement of EPW Committee members and supportive comments from President Trump. This unique show of broad, bipartisan cooperation speaks not only to the merits of the legislation, but also to its prospects for passage. The EPW Committee approved a highway program reauthorization in June 2015 that, with your personal support, spurred action from other Senate committees and the House of Representatives. This culminated in the enactment of the Fixing America's Surface Transportation (FAST) Act six months later.

We urge you to ensure the progress made on the ATIA continues by committing to schedule a reauthorization of the federal surface transportation programs for floor consideration this year. Such a pledge would be an unequivocal signal to the other relevant Senate committees to begin developing their respective components of the final bill.

Sincerely,
