TROLLEYBUS OPTIMISATION SYSTEME ALIMENTATION

ABB – A global leader in power and automation technologies

- 145,000 employees in about 100 countries
- \$39 billion in revenue (2012)
- Formed in 1988 merger of Swiss and Swedish engineering companies
- A global leader in power and automation technologies

ABB

Thomas & Betts

A Member of the ABB Group

BALDOR

power-one®

- ABB is a world leading independent supplier of innovative and reliable technologies to vehicle manufacturers, transit operators and system integrators.
- ABB designs and supply electrical equipment and solutions from the “**grid to the wheels**”

Industry challenges and customer needs

For the city

- An increase in urbanization and high mobility demands
- Traffic Congestion
- Public health:
 - CO2 and noise emissions
 - Evaporation of carcinogenic substances (OMS) coming from diesel motors Group 1 (since 2012)
- Dependence to foreign oil supply

For the bus operator

- Reduction of budgets
- Capital & operating costs
- Fuel price increase
- Higher reliability and life duration of the buses and infrastructure
- Optimized fleet size to reduce
 - acquisition costs (capital)
 - maintenance costs (operation)
 - costs of logistics to manage the fleet
 - cost of infrastructure at Depot (footprint & equipment)
- Maximizing number of passengers per bus

High density lines Autonomy vs. opp. charging

- Bus at depot
- Bus stopping
- Bus moving

- Bus not available for 5 hours
- 1 charger used at 50KW for 5 hours in depot (for fleet of 50 buses, 50 chargers and 2.5MW of input power for 5 hours)

Comparison of technologies

Figure ES-2: Fuel cost for diesel, CNG and electric buses with no and low demand charges

Critical factors:

- High capacity & energy efficient buses
- Energy management solutions to reduce/eliminate peak demand charges

Source: *Peak demand charges and electric transit buses - White paper* – US Department of transportation Federal Transportation agency – prepared by Ted Bloch-Rubin, Jean-Baptiste Gallo & Jasna Tomić CALSTART – 8/14/2014

Large capacity, Flash charging electric bus “A world premier in sustainable mobility”

Partners:

TPG: Operator

OPI: Industrial promoter

SIG: Utility

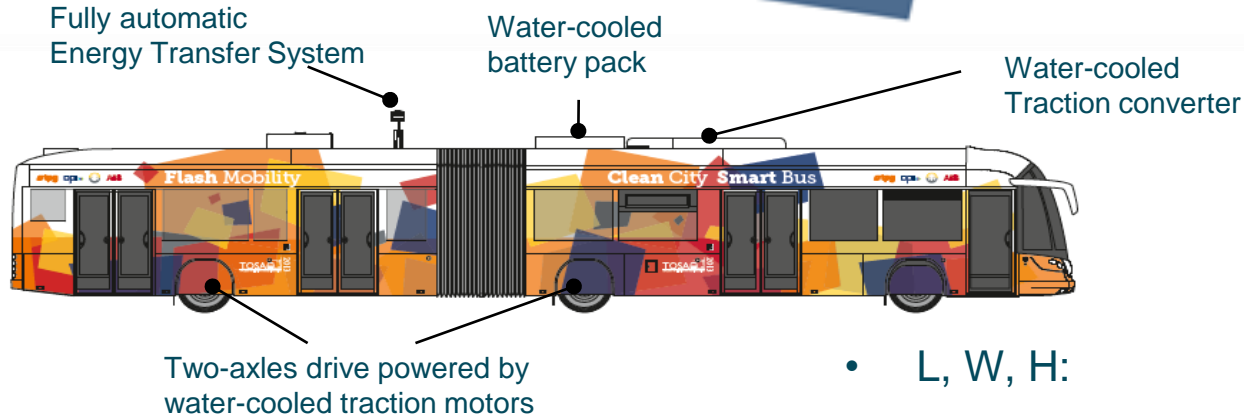

ABB: Technology provider

Support and Collaboration:

High capacity, high efficiency & ultra-fast charging bus

Goal:
Minimizing the energy storage on-board for energy and cost efficiency

- L, W, H: 18.74m, 2.55m, 3.40m
- Weight: 19.5t
- Capacity: 134 pass.
88+44(seats)+2(wheel-chair)
- Battery pack: 10 years - Technology accepting cycling & fast charging – Autonomy based on distance to depot
- Battery charger: Integrated (regen.)
- Traction motors: $V_{max} = 85$ km/h
- Fully automated energy transfer

Principle of operation & full line configuration

Length: 8 km (one way)

Altitudes: 380m - 460m

Fleet: 11 articulated buses (60 feet)

(Two motorized axles,
Battery equivalent to
2 E-cars)

Total bus stops: 42

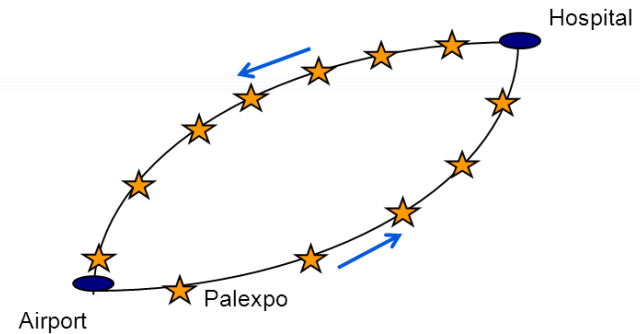

Flash stations (15 sec.): ★

- 7 (uphill)

- 5 (downhill)

Terminal stations (3-4 min.): ●

- 2

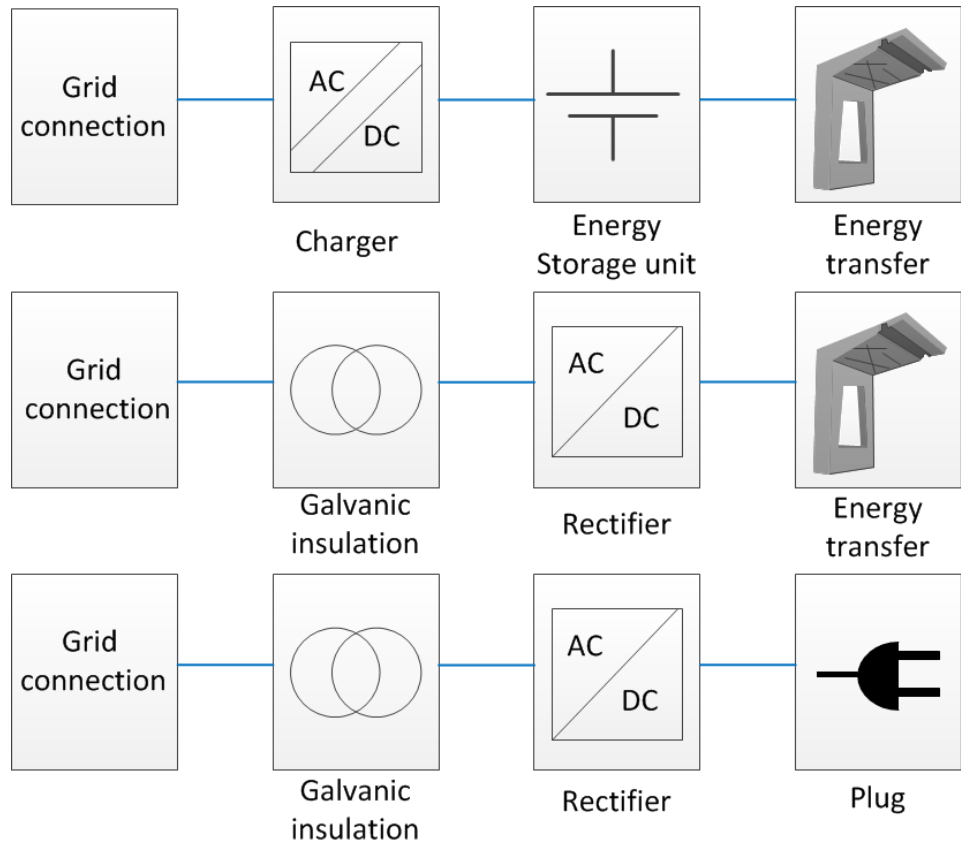

Feeding stations - Flash/Terminal/Depot

Grid side

Flash 2'30"
50 kVA, 400VAC

Terminal 3-4'
200kVA, 400VAC

Depot 30'
120' (4 buses)
50kVA , 400VAC

Bus side

Flash 15"
400kW, 500VDC

Terminal 3-4'
200kW, 500VDC

Depot 30'
50kW, 500VDC

Traction equipment – traction converter and motors

The water-cooled traction and auxiliary converters. Breaking energy recovery and management of the battery charging.

2 water-cooled traction motors for high efficiency and low maintenance requirement.

Energy storage

- Water-cooled LTO battery pack:
- Small (eq. to 2 eCars bat. 38kWh)
- Safe
- Long life (10 years)
- Performances (flash charging at 10C)
- Wide temp. op. range (-40... +55C)
- Weight: 1,040 Kg

One change in the life of the bus (20 years)

Energy transfer system

Fully Automatic Energy Transfer System (no driver action)

- Makes the connection within 1 sec.
- Compensate distance to the curb: 0 to 55cm
- 3m-long connecting receptacle
- High-Power and safe: Fully compliant with most demanding EMF req.
- Efficiency: less than 1% losses

Thank you !
