

Unleashing Mobile Ticketing SDK's & API's

Jake Sion

COO, Transit

Montreal, QC

Ten years ago...

**Should we open
transit data?**

**“Forming a partnership
with Google was not in
our best interest from a
business perspective.” -
December 13, 2008**

“The agency would demand thousands of dollars in fees and send a cease-and-desist order to the digital doorsteps of local developers who used system timetables, maps and routes in their application.” - September 27, 2009

The New York Times

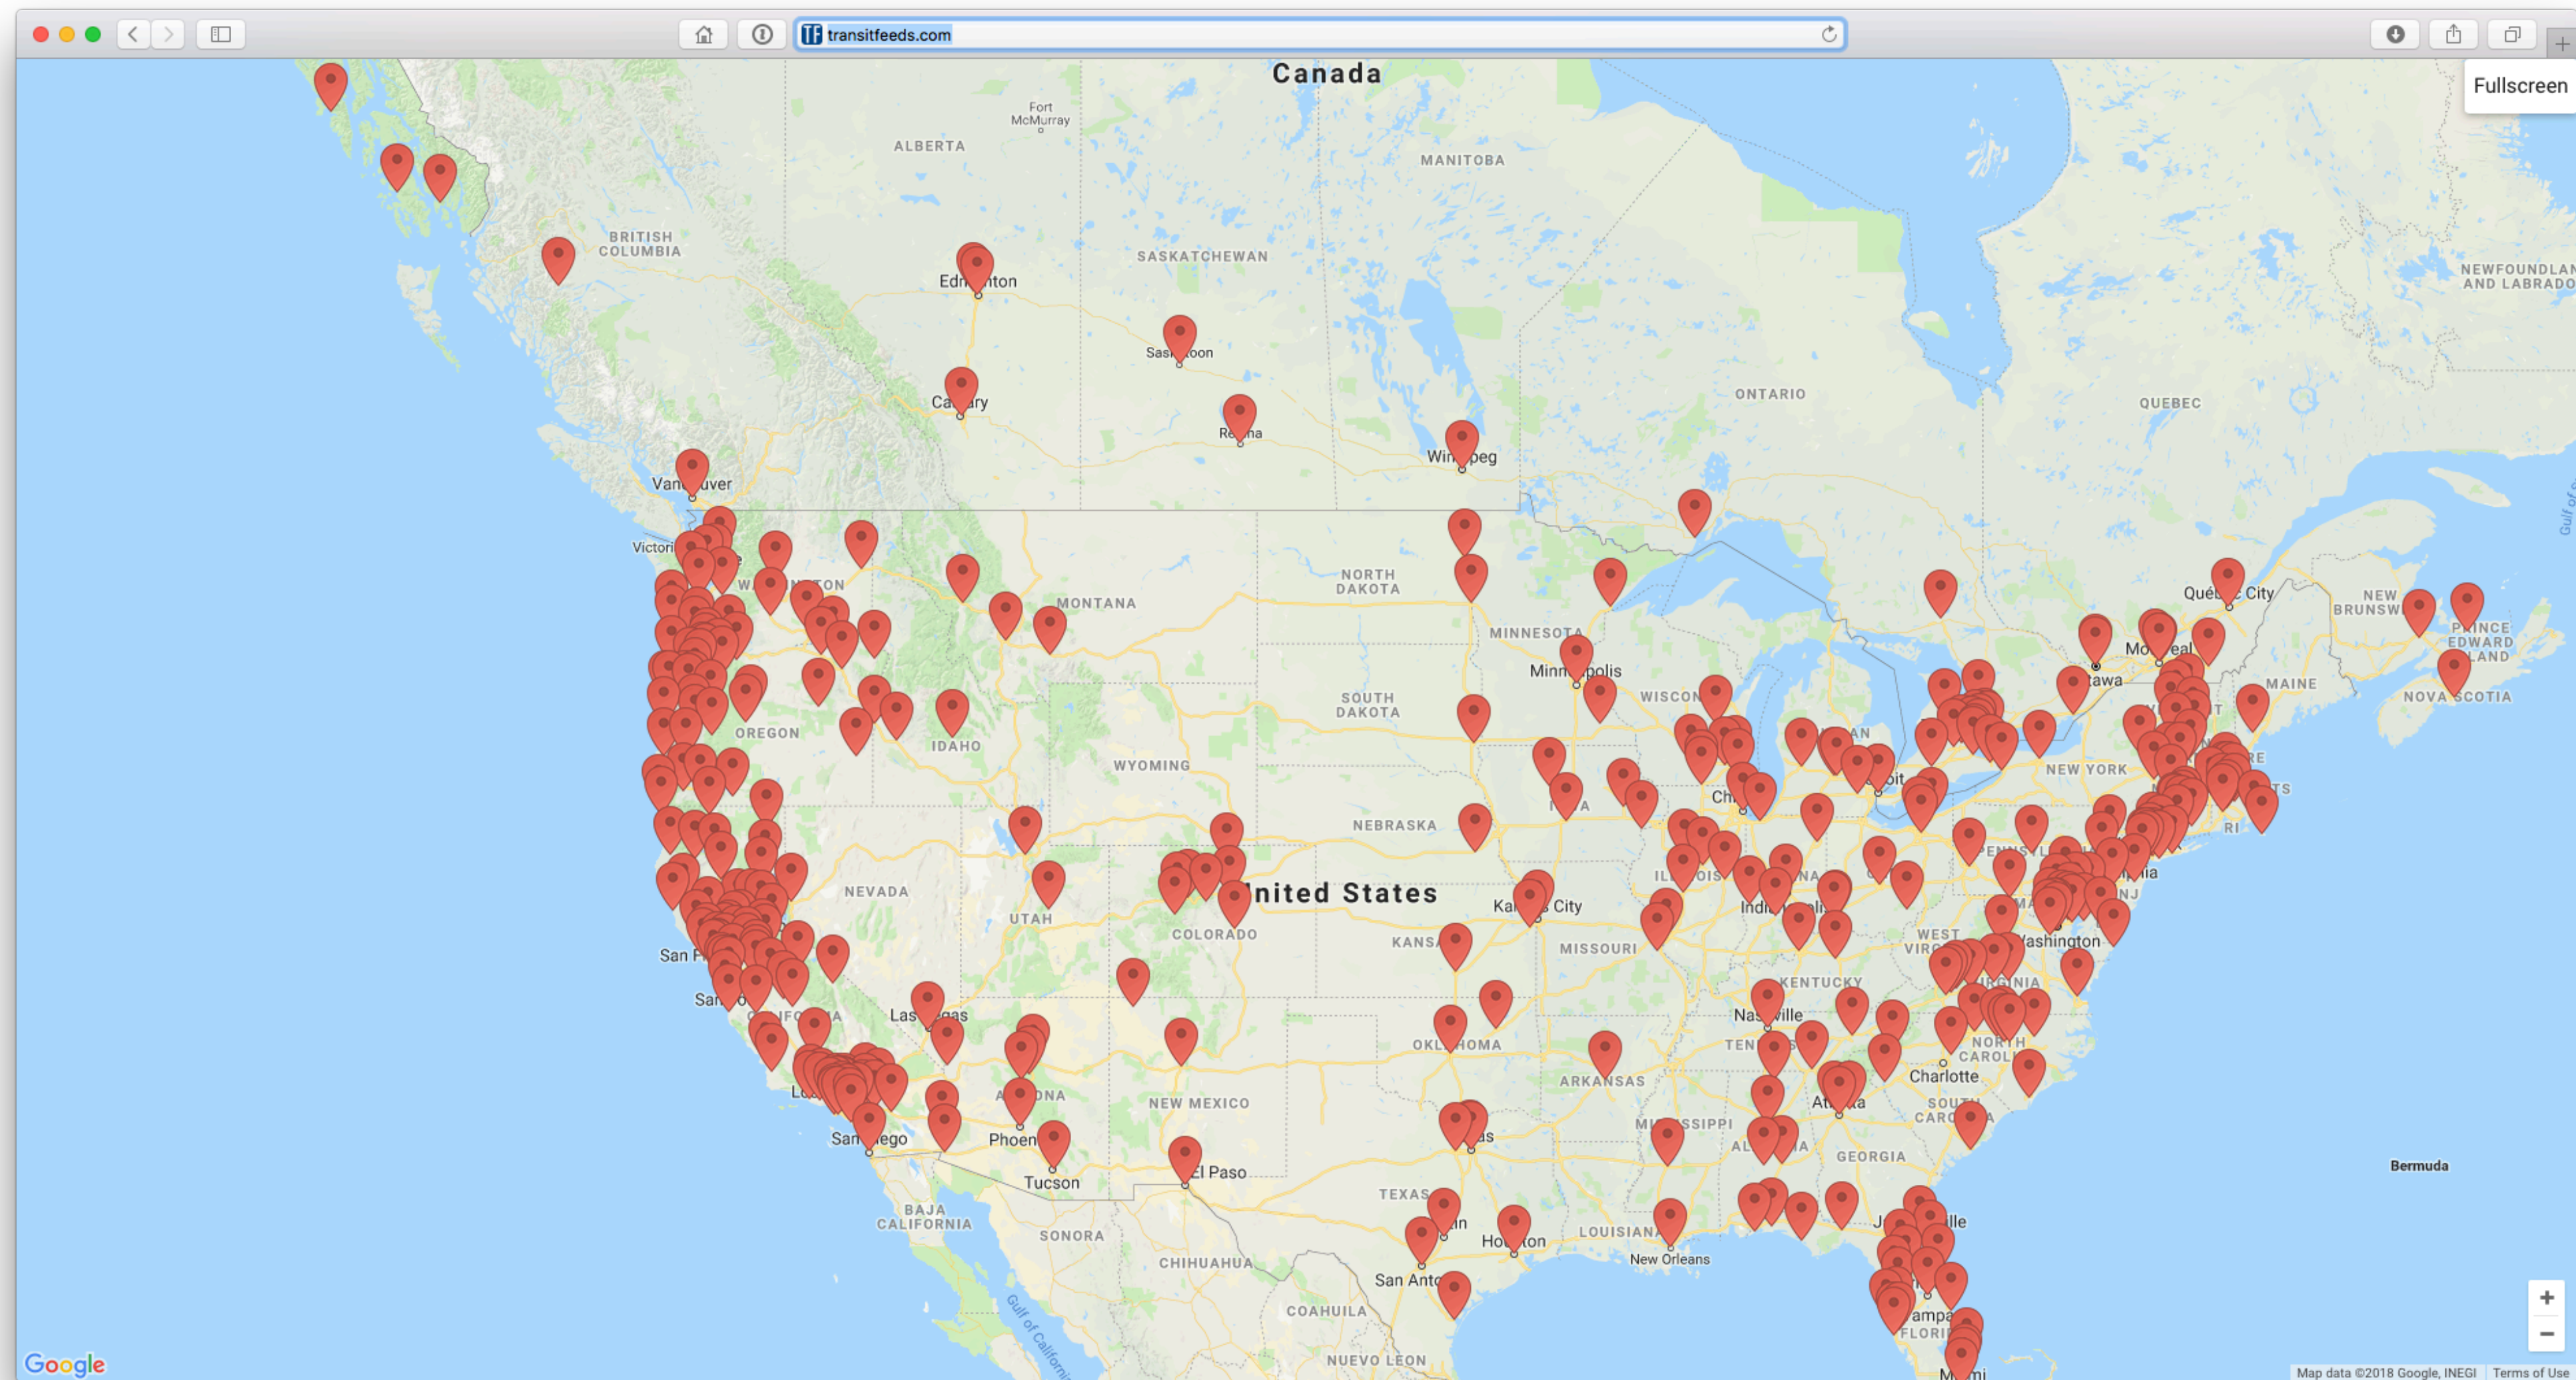

**“[We] do not, nor will, provide GTFS Data.” -
October 25, 2012**

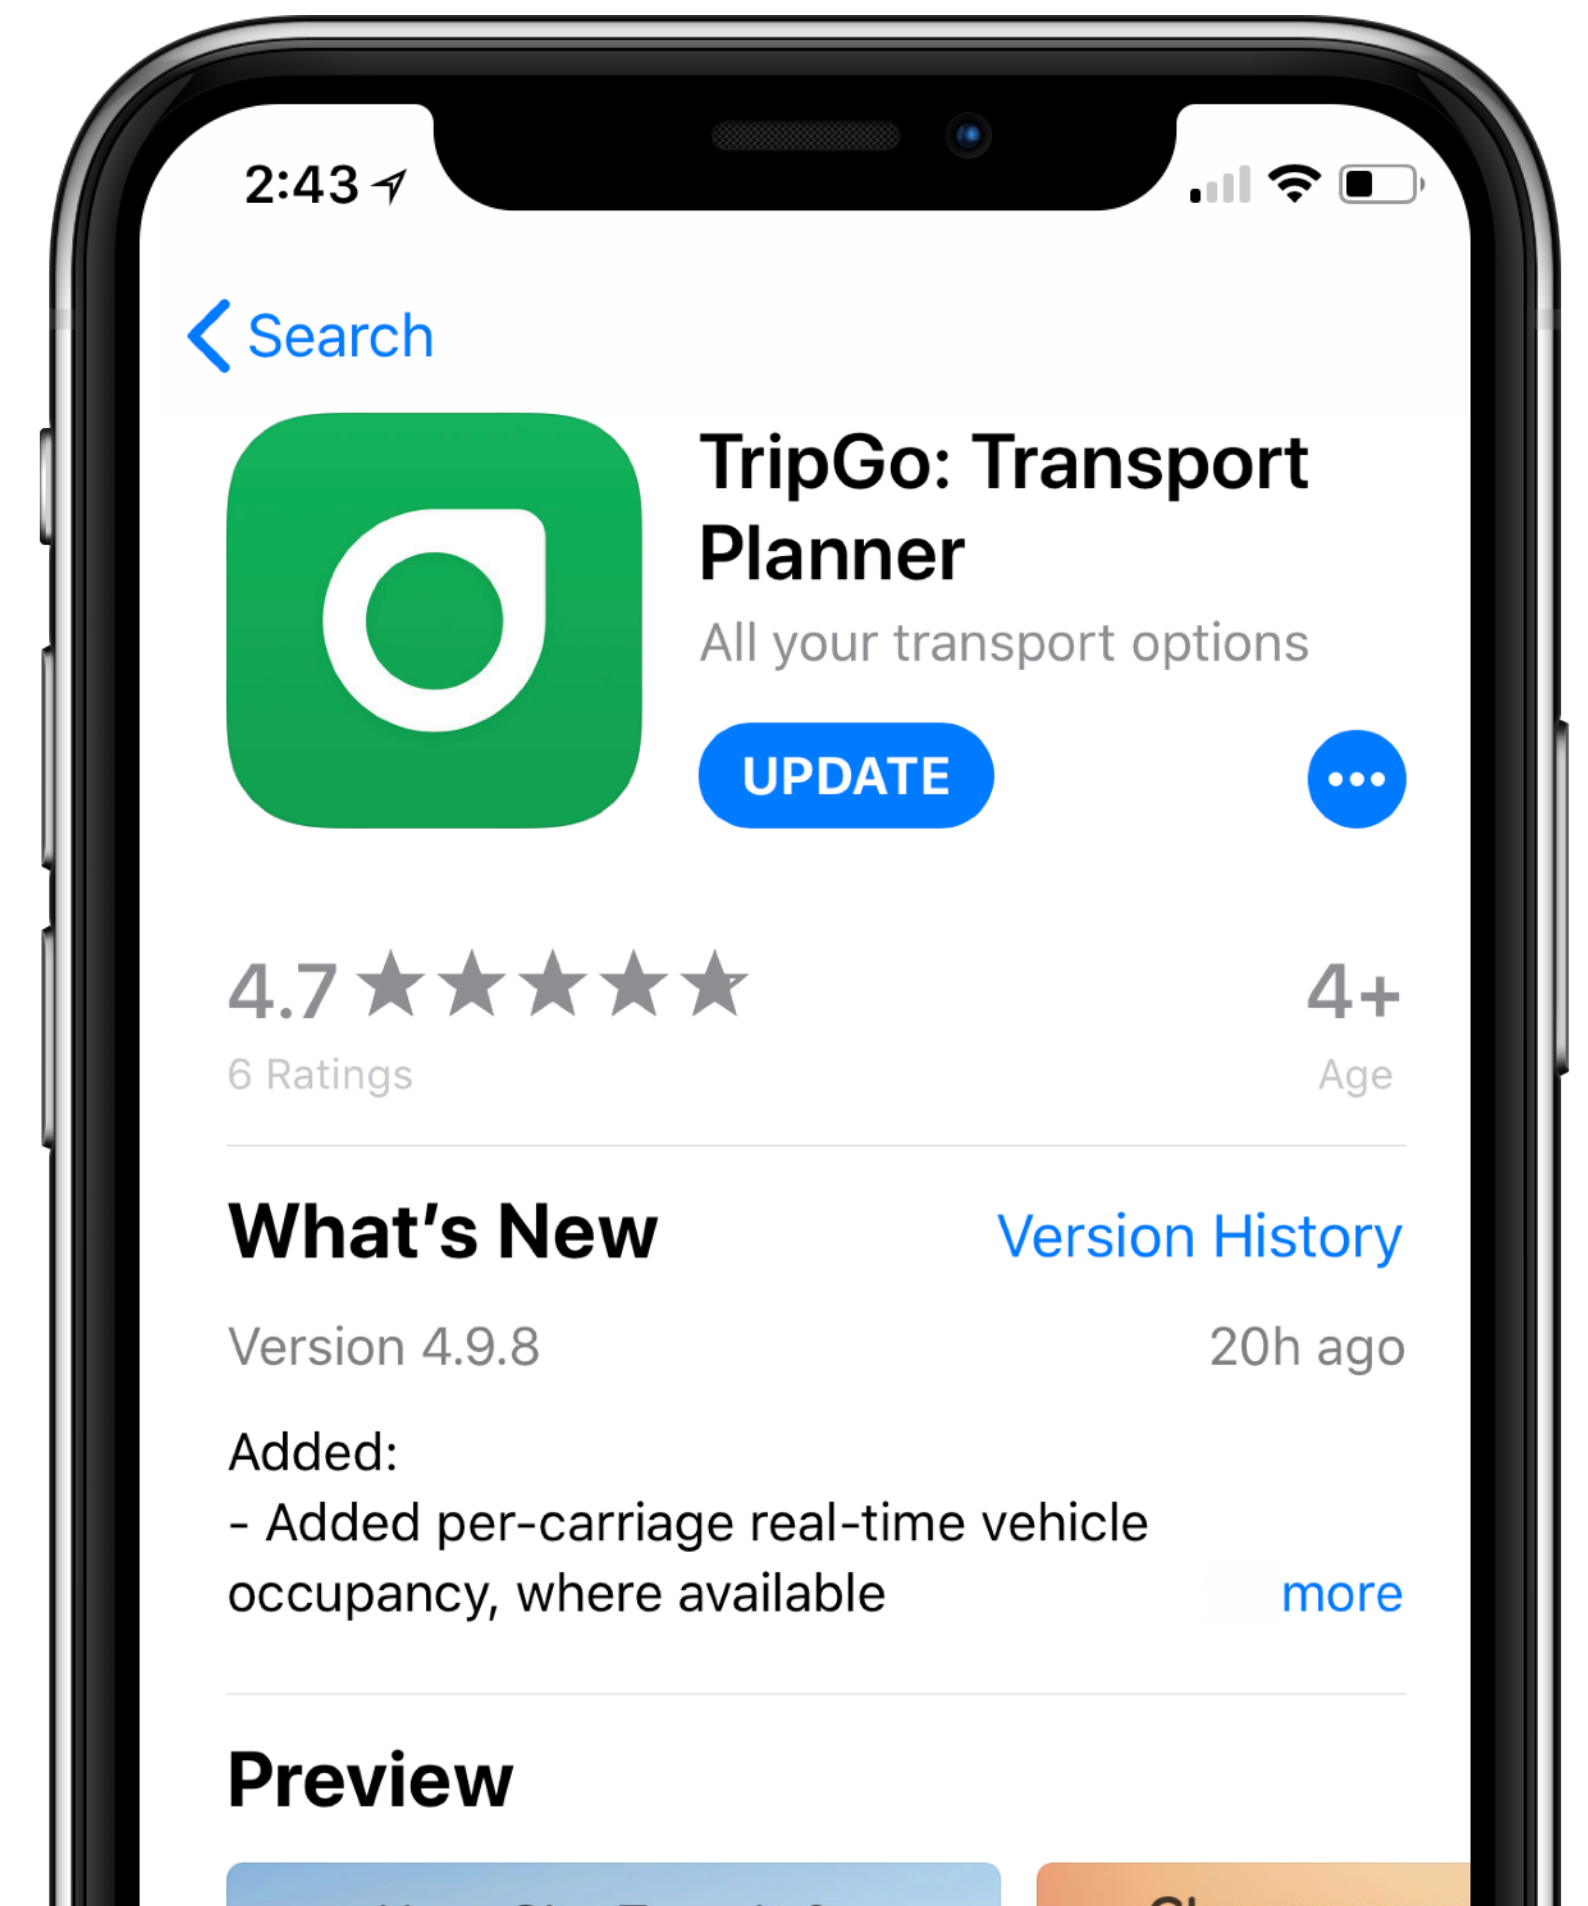

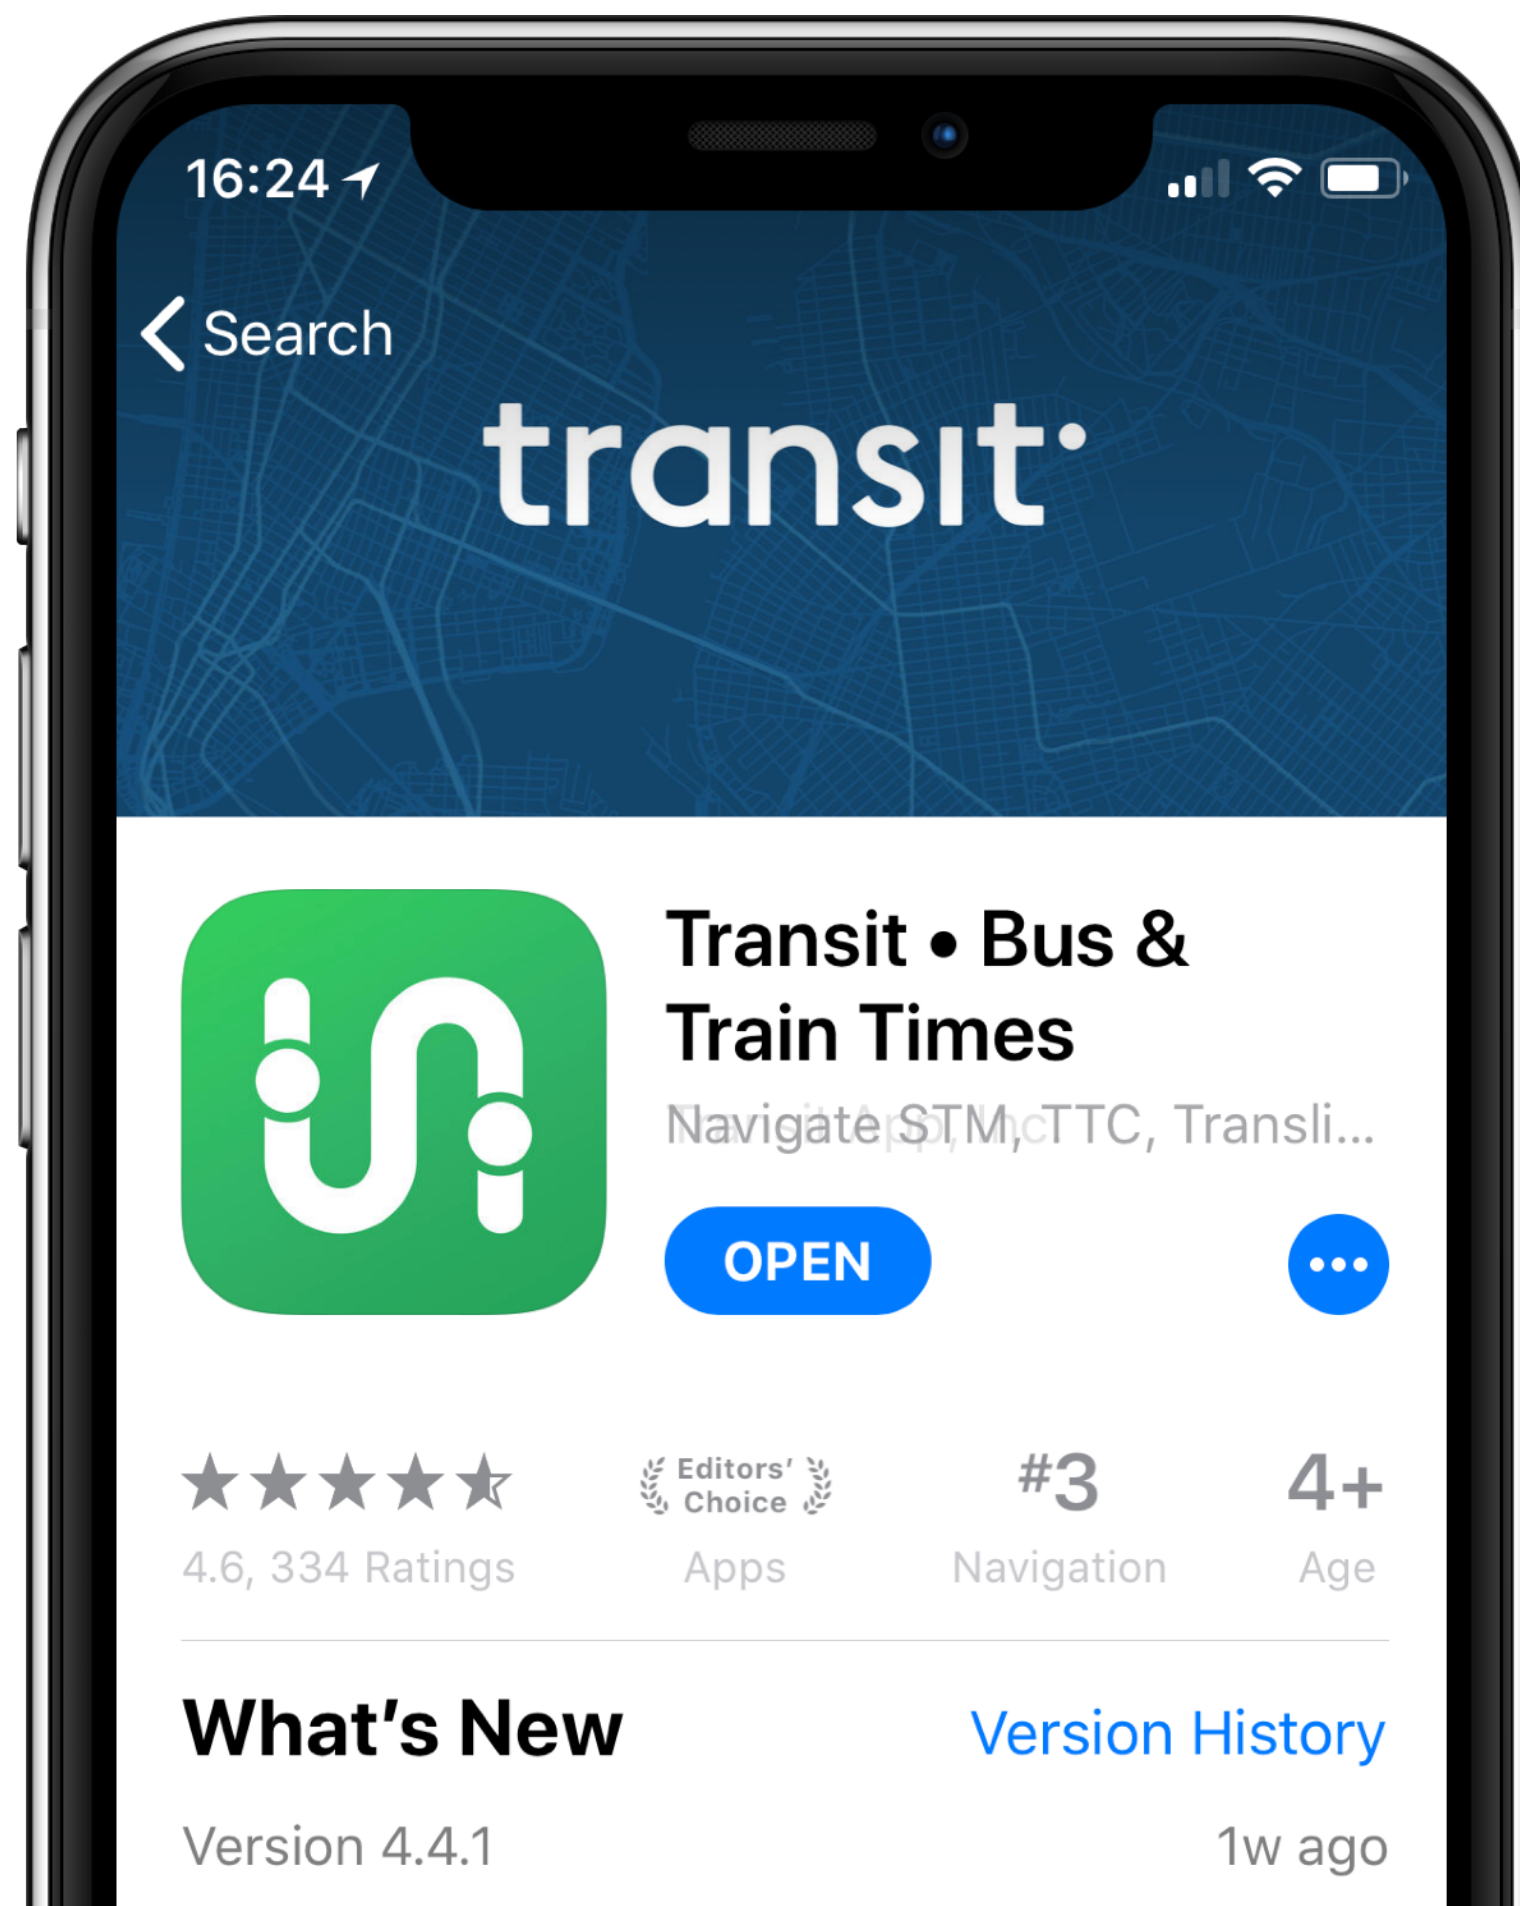

transit

Now: Hundreds of US cities with open, standardized GTFS data

Many high quality apps, no cost to agencies

First US mTicketing launch in 2012

What does mobile ticketing look like today?

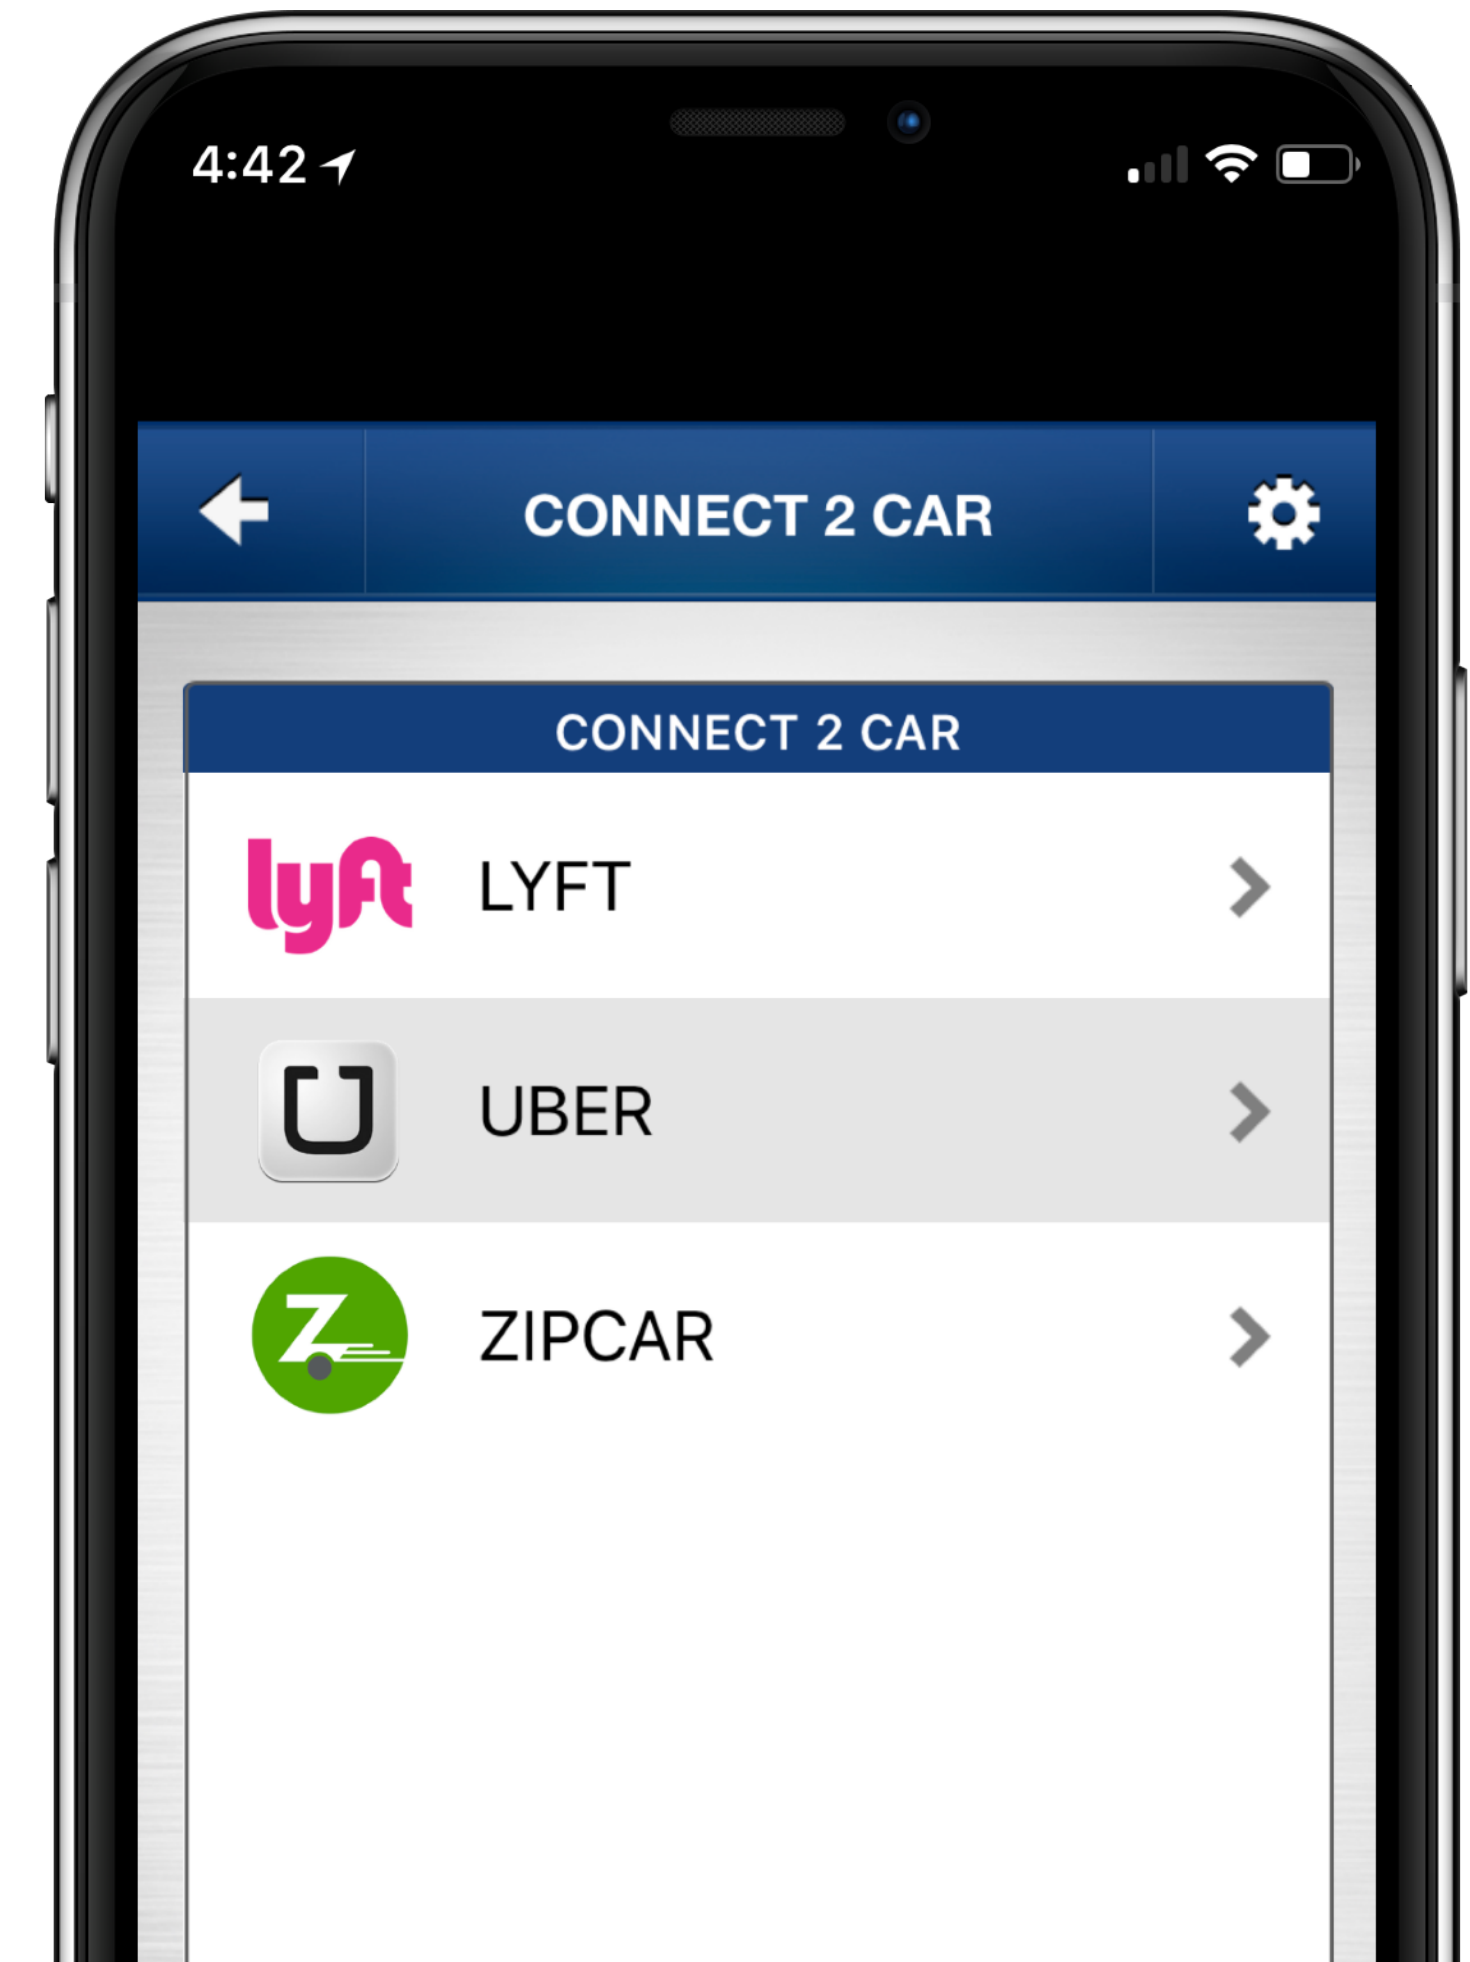

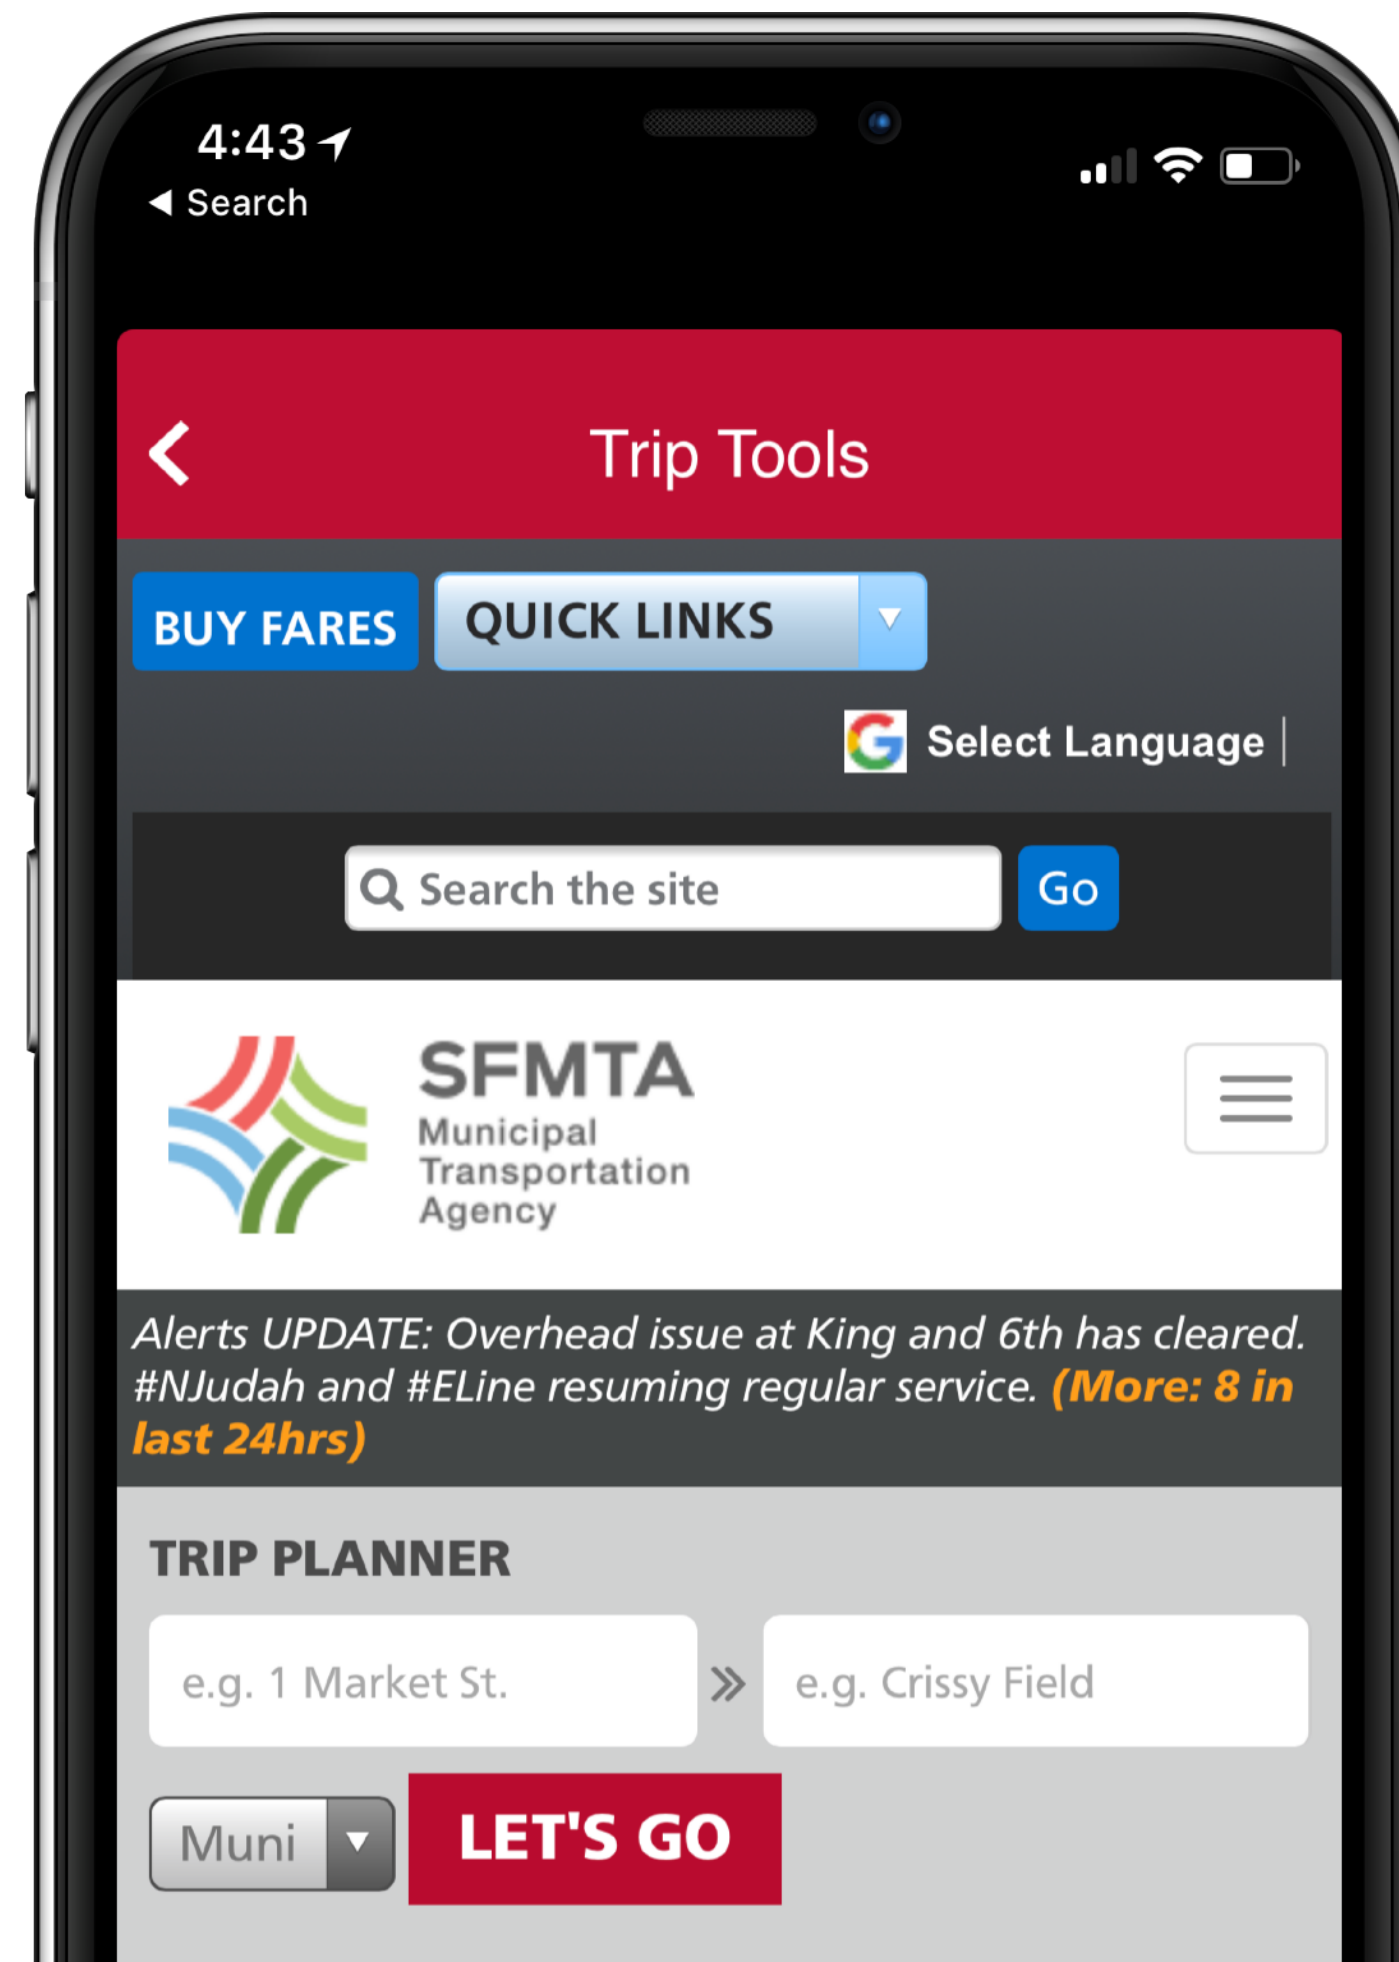

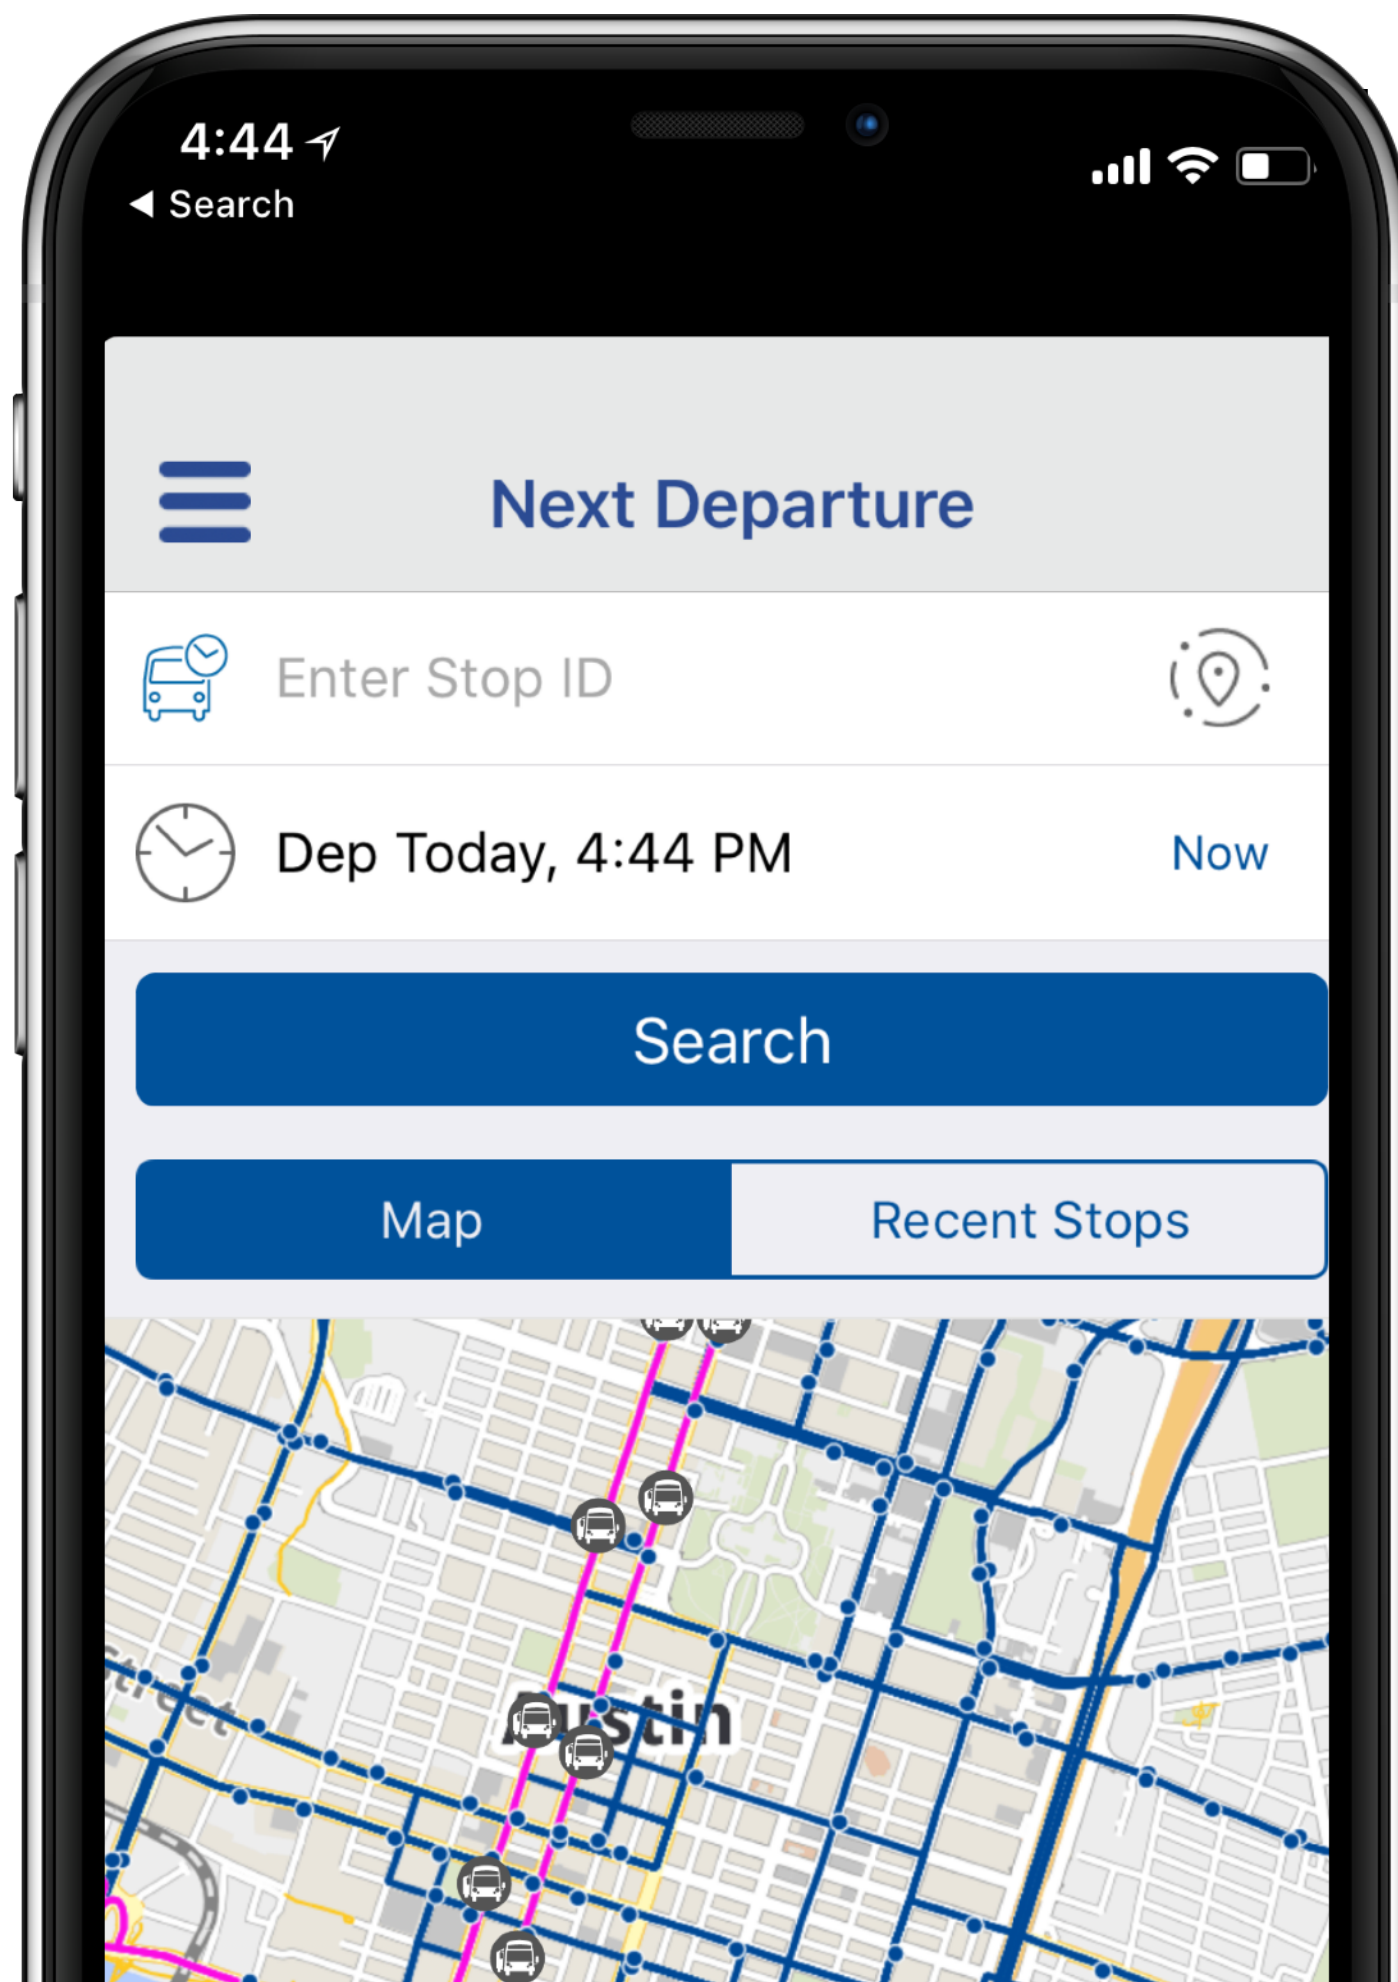

Low cost to deploy, massively increases access

Most agencies launching their own branded ticketing app...

...even in the same metro area.

Not great at real-time tracking, trip planning, or first/last mile

**Are there lessons we can apply
from innovators in the Open
Data movement? Or from other
transportation services?**

“We’ve put SFMTA in front of customers in so many places that we wouldn’t be able to do on our own... and frankly transit agencies in general don’t have the vision.”

- Timothy Moore, BART (Sep 10, 2009)

“The T is not fundamentally a technology company. We feel very strongly that third parties do a better job than we do at developing apps,”

- Josh Robin, MBTA (July 28, 2011).”

The biggest advantage... is transit information appears in a global set of products that are easy to use and visited by millions and millions of people every day.... Riders benefit from being able to find information in a familiar user interface and in the context of other useful information."

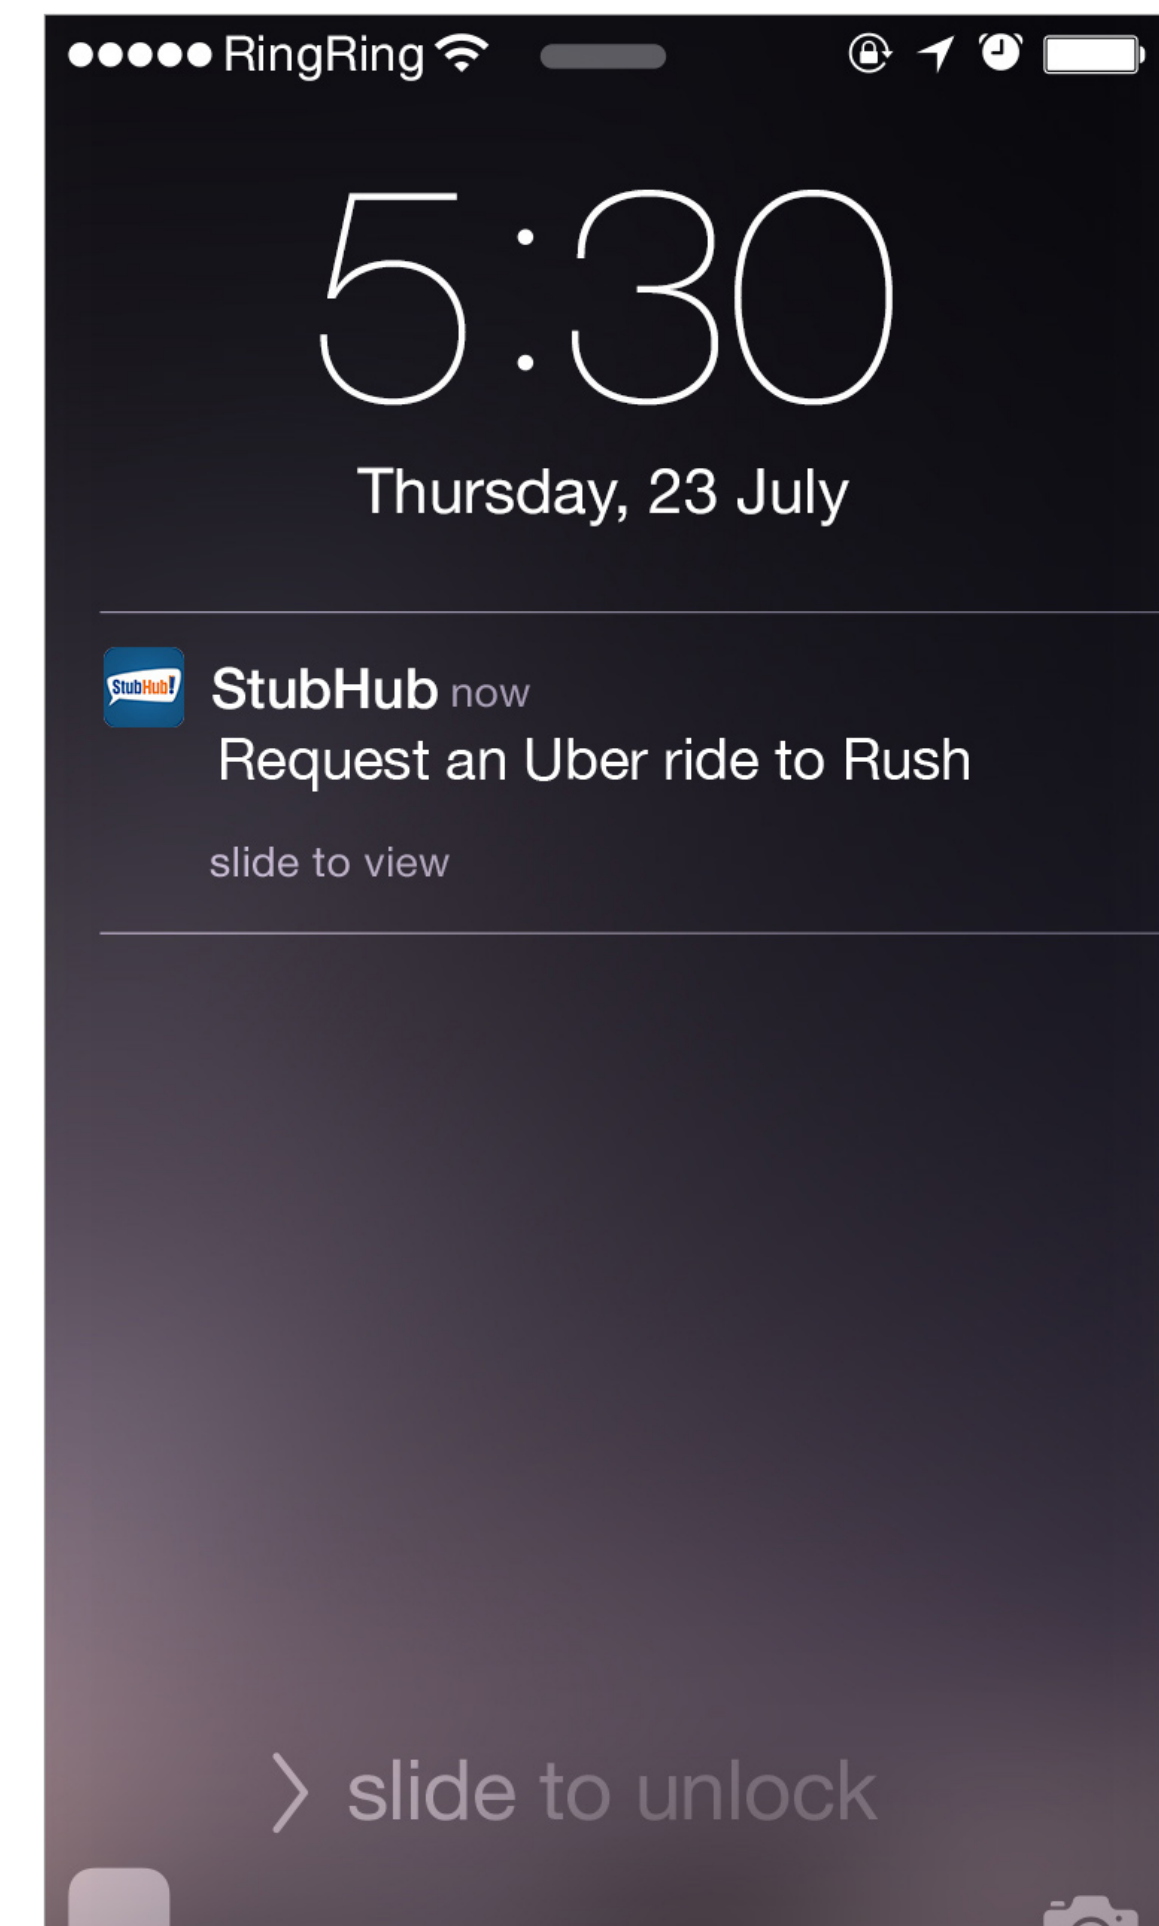

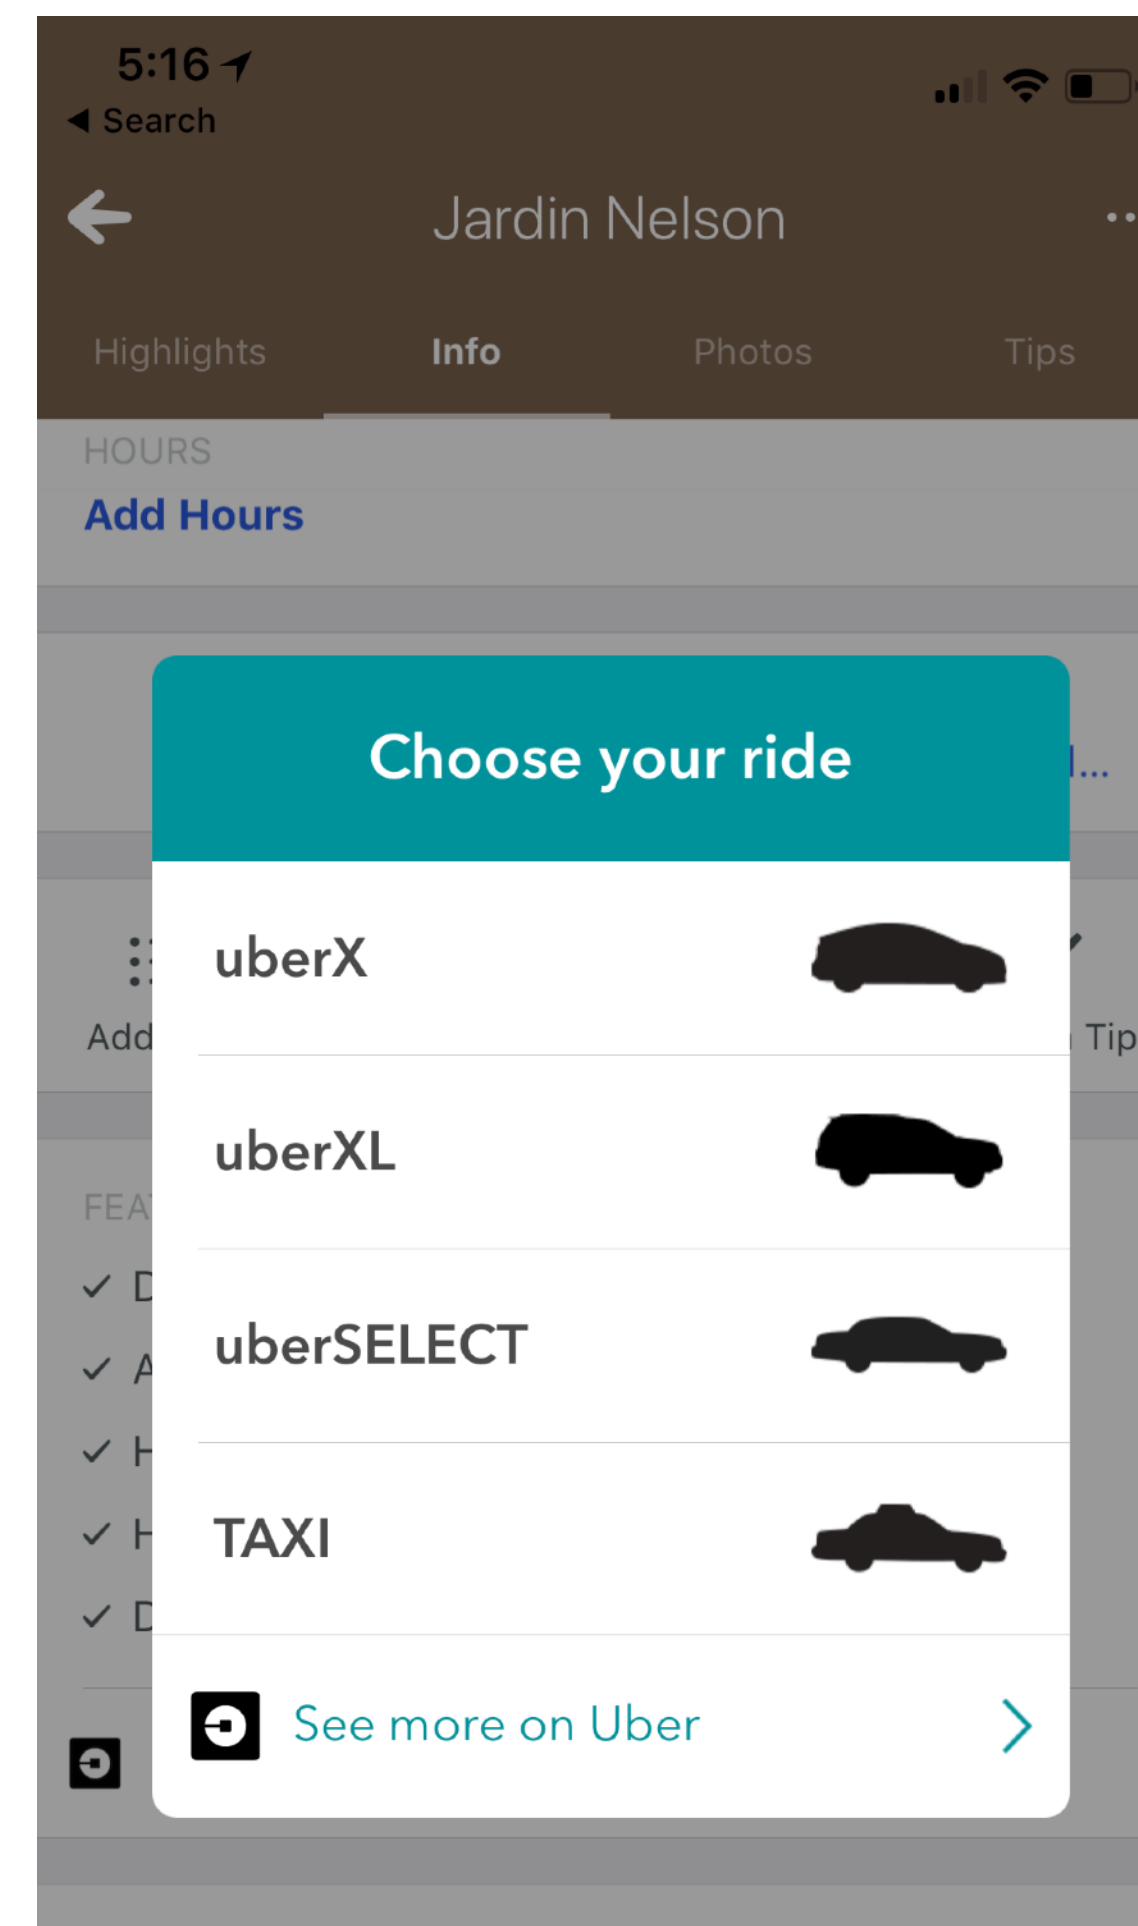

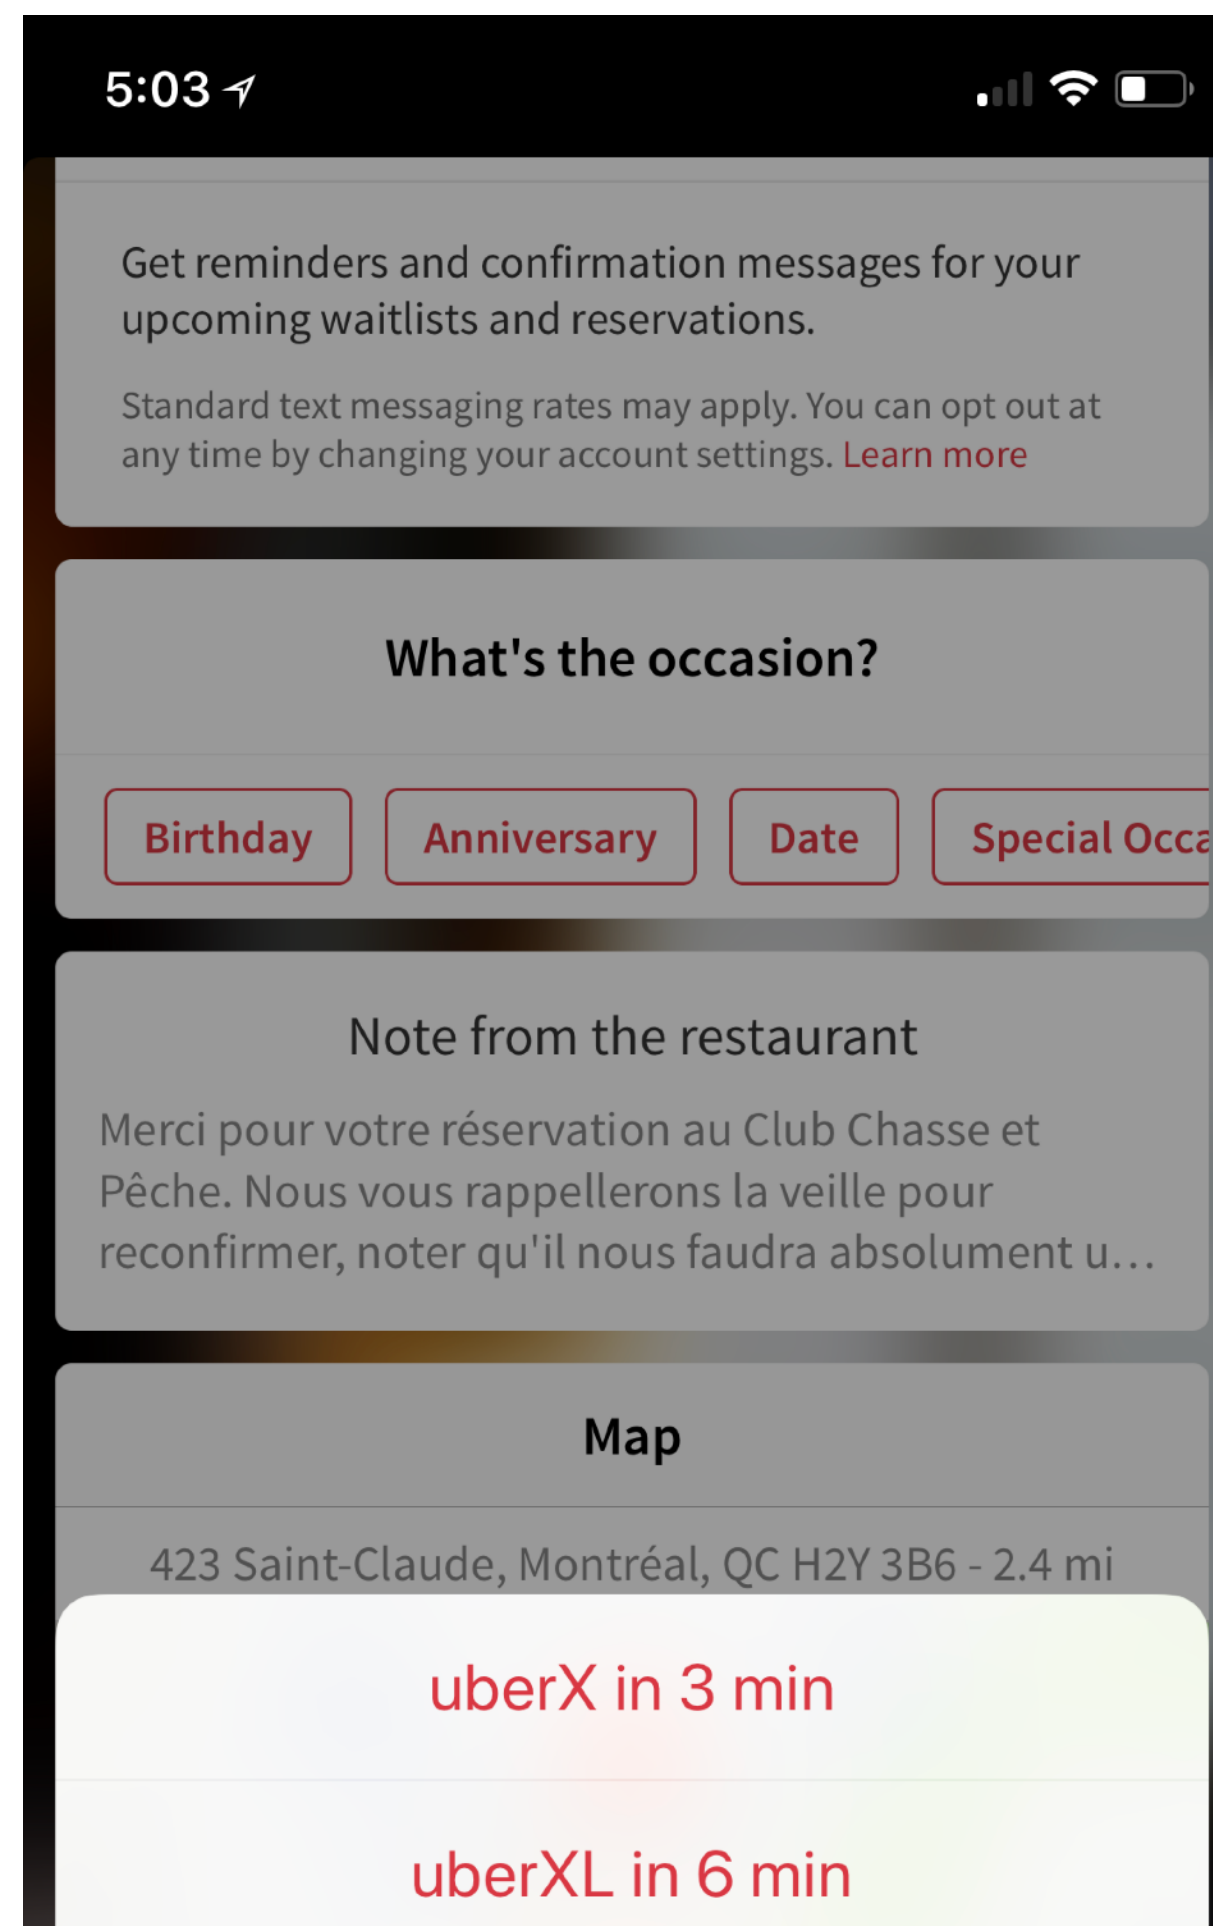

- Bibiana McHugh, TriMet (2013)

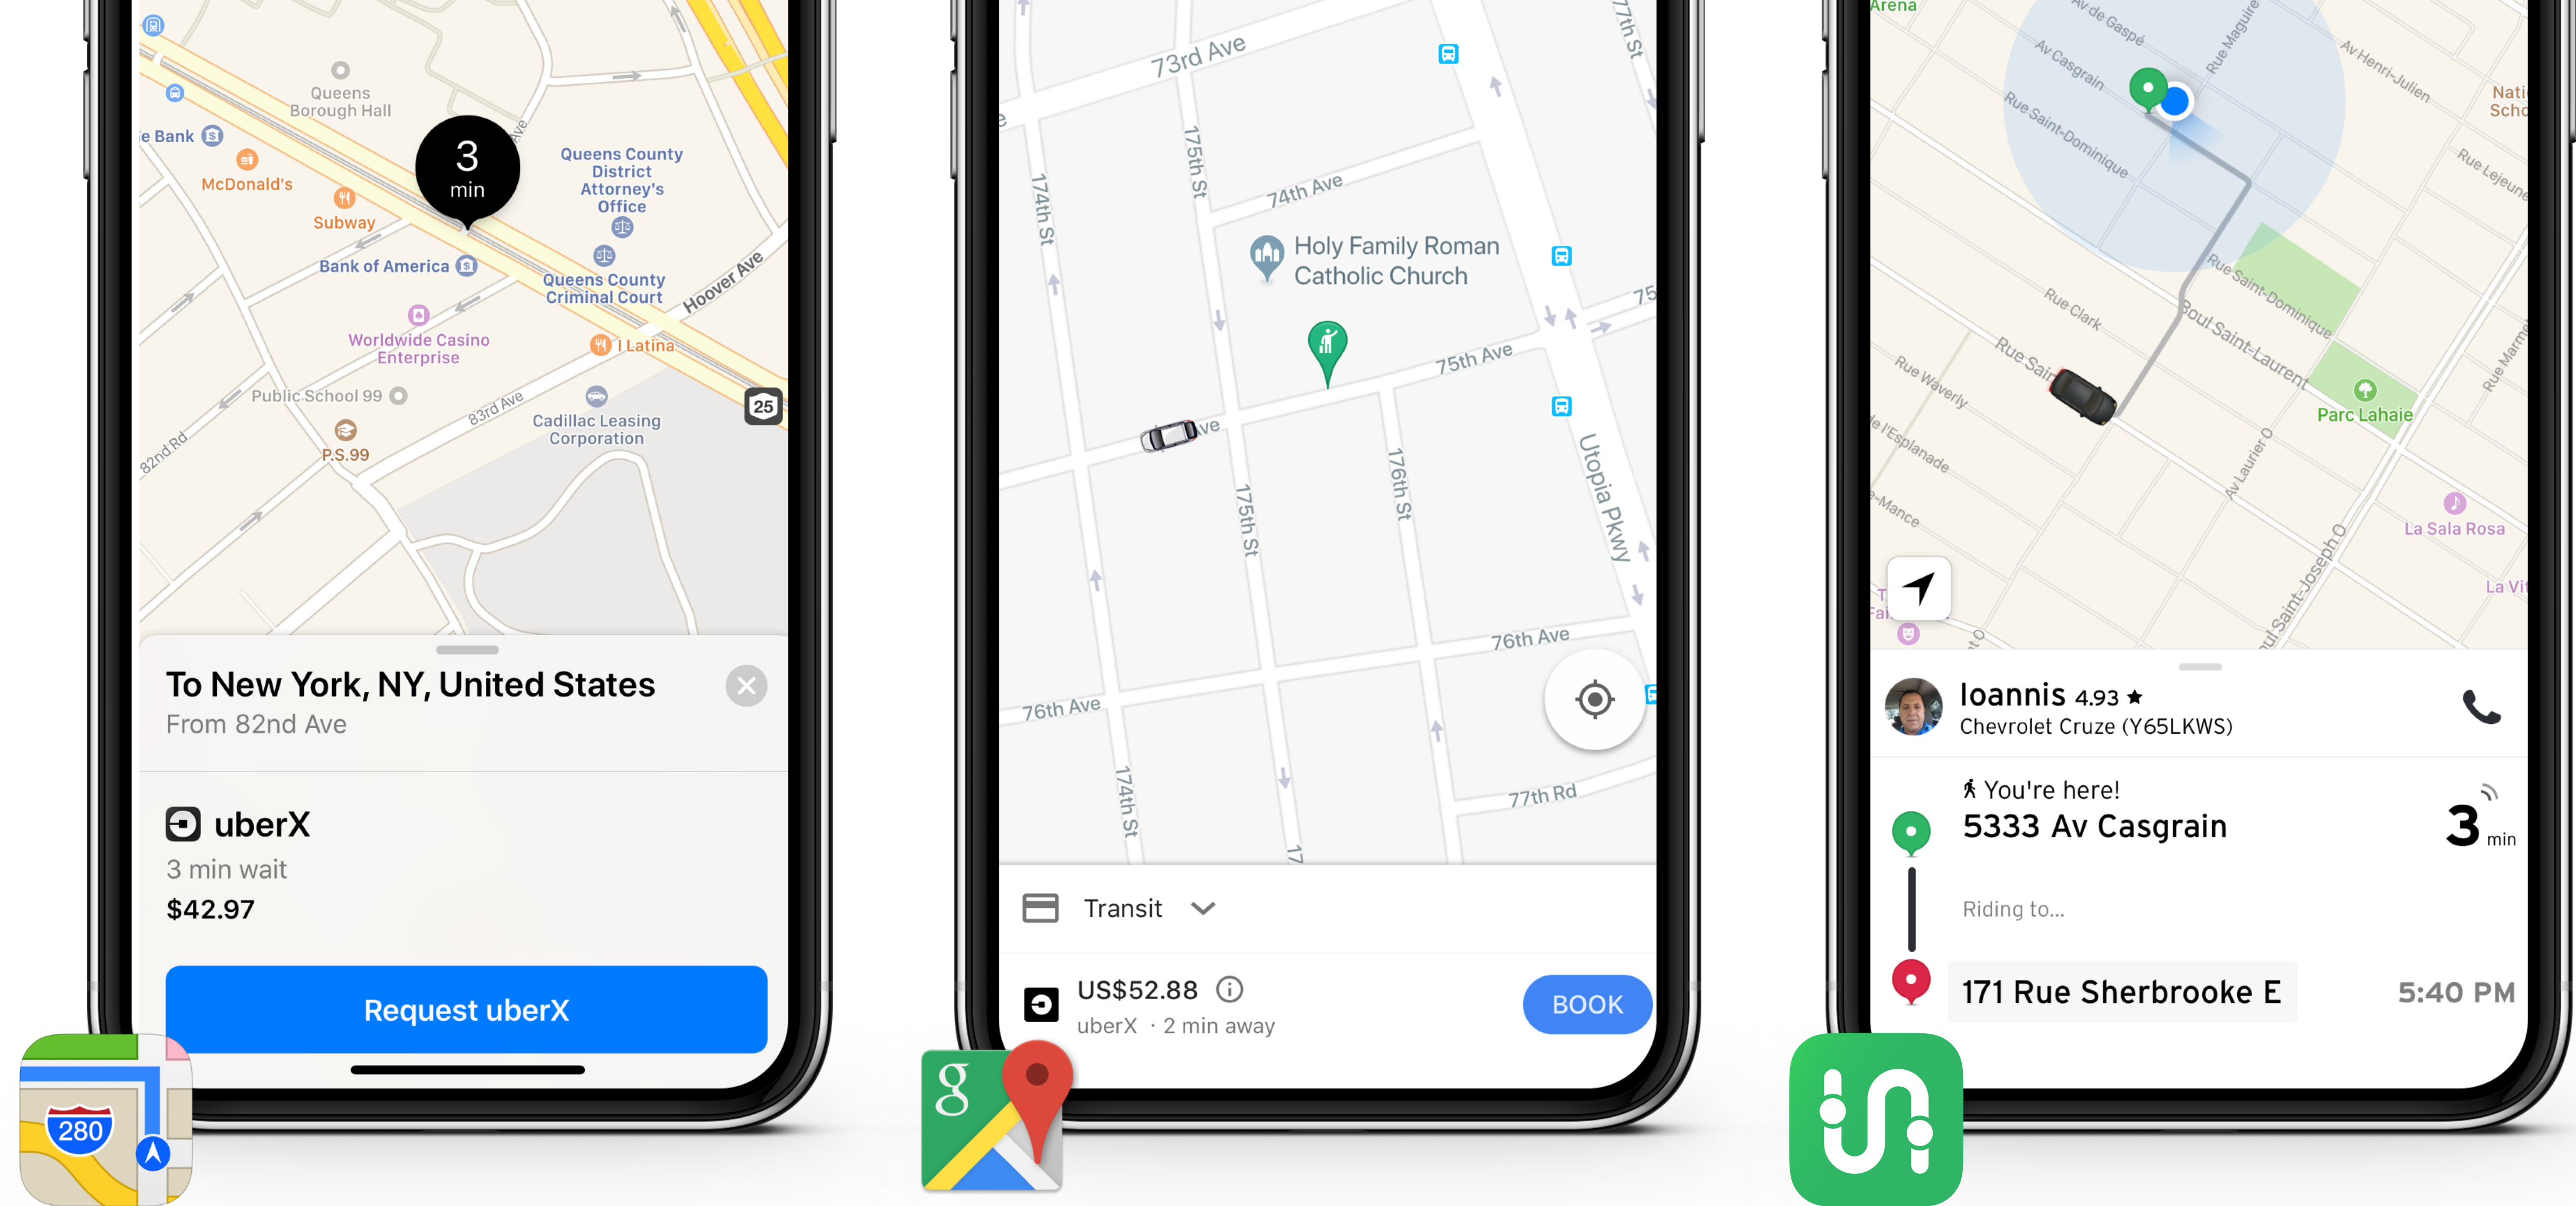

Parallel story to mobile ticketing

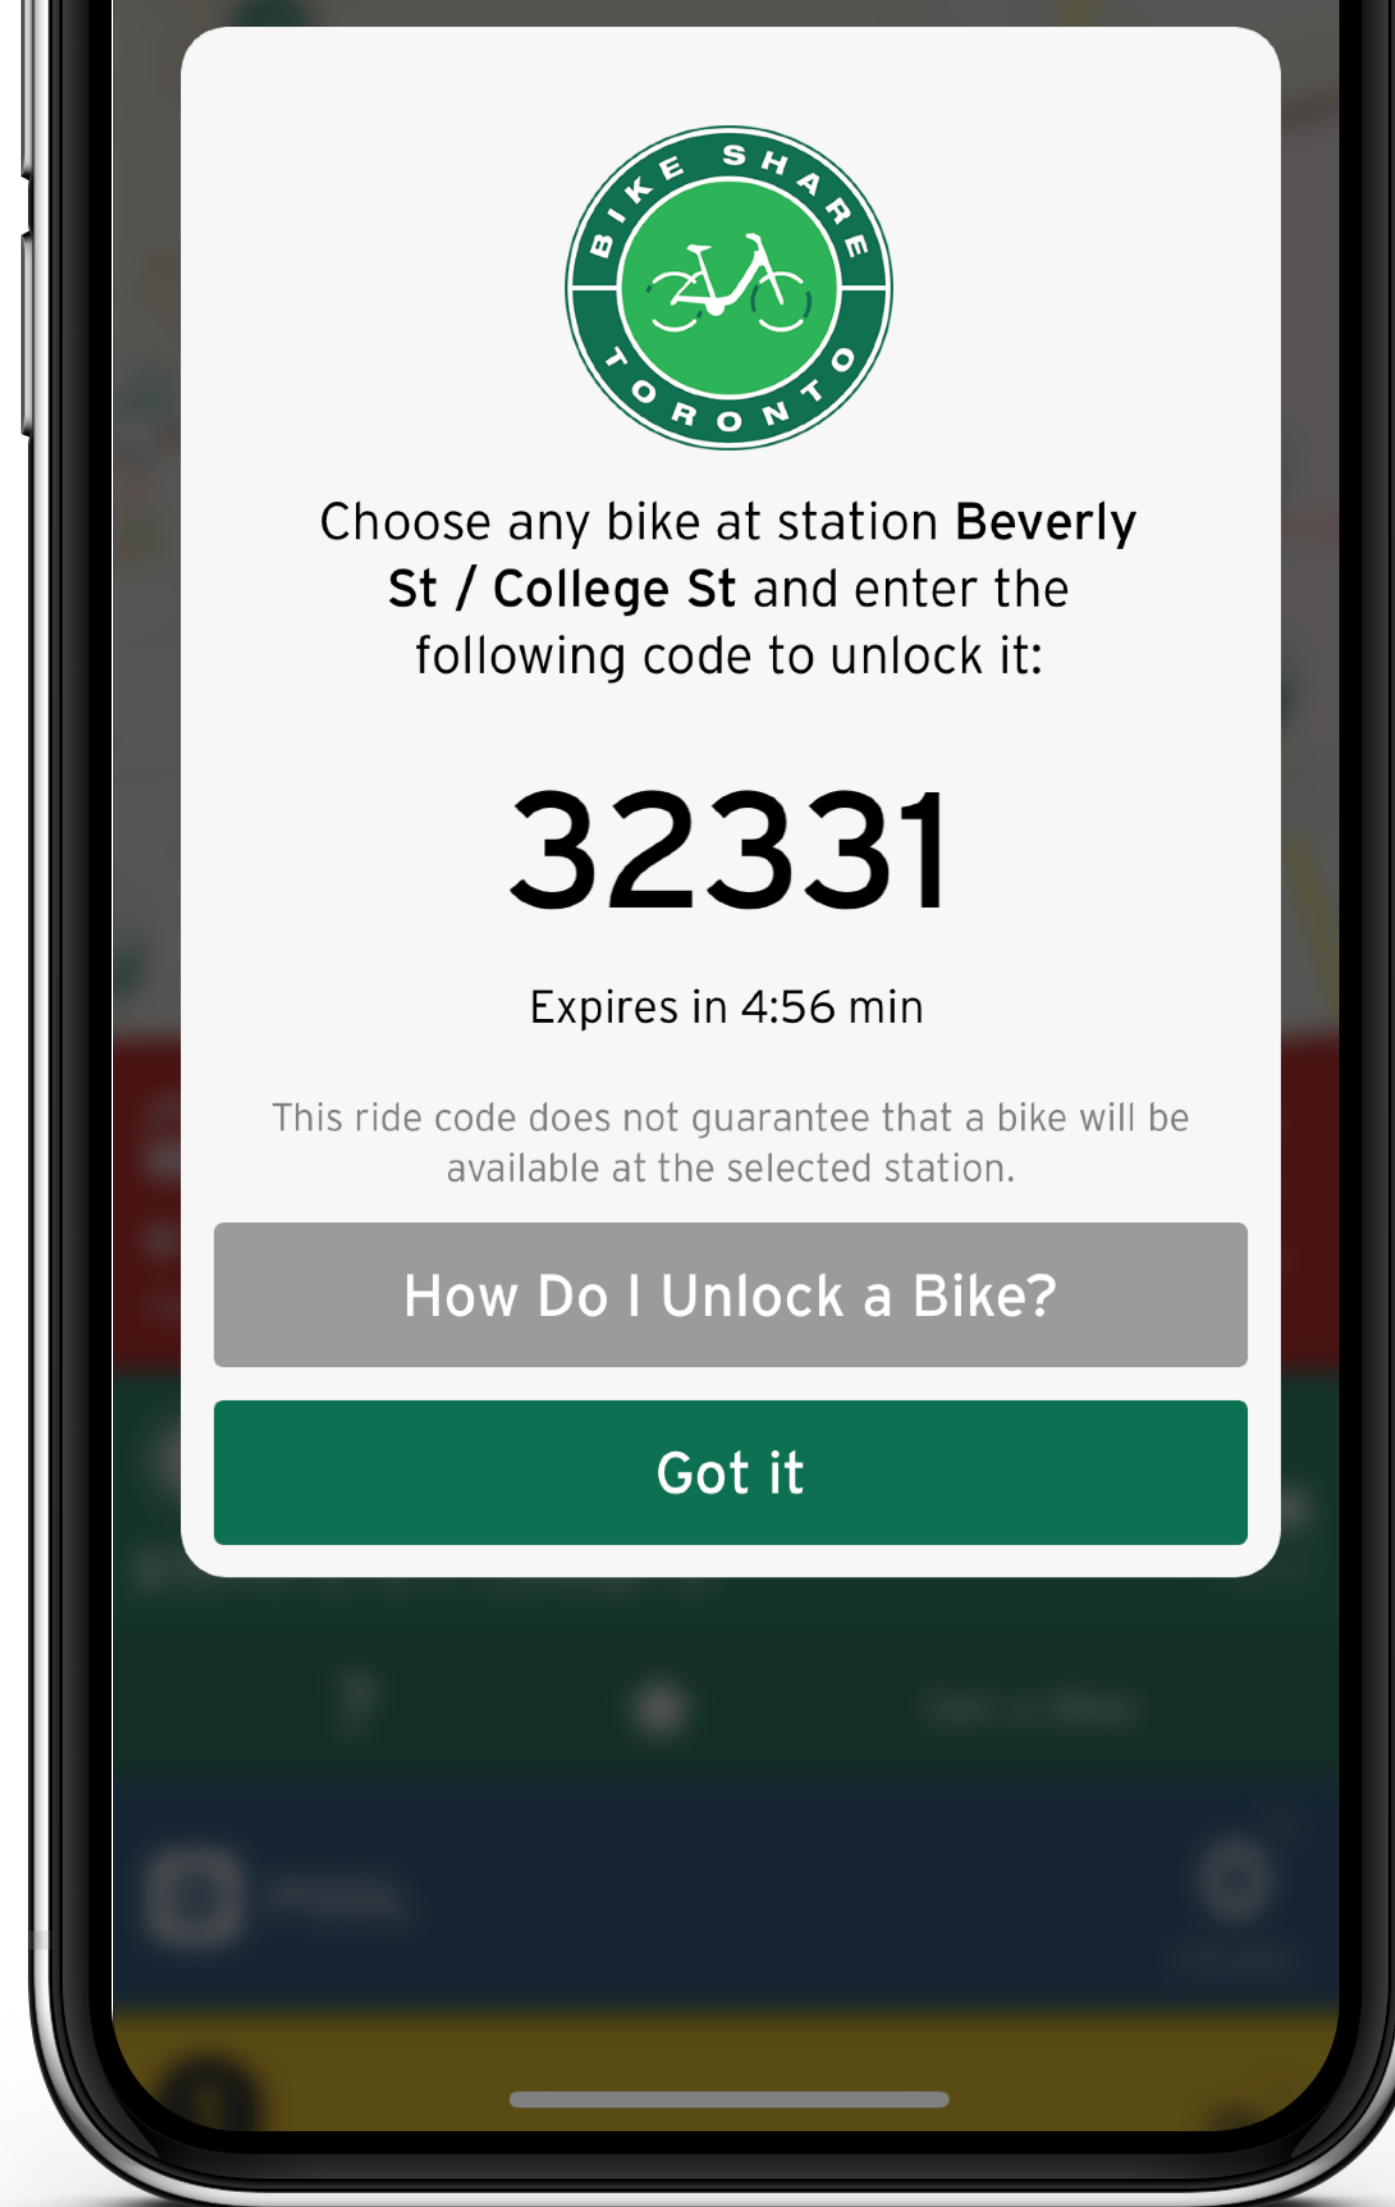

- Integrate into global products visited by millions & millions of people
- Get in front of customers in so many places
- Agencies are not technology companies
- Familiar interface for riders, and be in the context of other useful information

Uber opened its API in 2014, integrates into many popular apps

Plan, book and pay for Uber trips inside the most popular journey planning apps

20%
of day pass sales
through *Transit*

40%
of all trips unlocked
through *Transit*

Buy passes & unlock bikes for 10 bikeshare systems using *Transit*.
