SUGGESTED IDENTIFICATION

American Public Transit Association, 1989 **Transit Fact Book**, Washington, DC, 1989.

APTA Research & Statistics Department

August 1989

Chairman's Message

I am pleased to present this issue of the APTA **Transit Fact Book**. The **Transit Fact Book** for many years has been a standard statistical reference of trends in transit finance and operations. The association recognizes the importance of this information and is committed to continue to obtain, record, and compile transit statistics and serve as the central repository for transit data.

This year APTA has expanded significantly the **Transit Fact Book** to provide more interesting and useful information. Among the new data tables are a chronology of transit history, a list of major transitways, comparisons of vehicle energy efficiency, transit ridership by various categories, and rankings of the largest transit systems by mode.

The trends highlighted in this edition of the **Transit Fact Book** show the steady growth and improvement in public transit during the past decades. As we look ahead, the continuing commitment to quality services will strengthen further the role of public transit in North America.

James E. Cowen
Chairman

Transit Fact Book

TECHNICAL NOTES

The American Public Transit Association (APTA) is the recognized source for statistical data and information about transit in the United States. APTA obtains data from member transit systems in the United States and uses these figures to estimate trends for all United States transit systems. The **Transit Fact Book** also contains data for Canadian transit systems provided by the Canadian Urban Transit Association (CUTA).

The **Transit Fact Book** was first published by an APTA predecessor organization in 1942.

APTA is an international organization of transit systems and related organizations in the United States, Canada, and other countries. APTA members serve the public interest by providing safe, efficient, and economical transit services, and by improving those services to meet national energy, environmental, and financial concerns. Over ninety percent of persons using urban public transit in the United States are carried by APTA members.

APTA members total over 900 and include motor bus and rapid transit systems, organizations responsible for planning, designing, constructing, financing, and operating transit systems, business organizations which supply products and services to transit, academic institutions, and state associations and departments of transportation.

Formed on a cooperative, nonprofit basis, APTA's objectives are:

- to represent the public interest in improving transit for all persons
- to represent the interests, common policies, requirements, and purposes of the operators of public transit
- to provide a medium for exchange of experiences, discussion, and comparative study of public transit affairs
- to promote research and investigation to the end of improving public transit
- to aid members in dealing with special issues
- to encourage cooperation among its members, their employees, and the general public

- to encourage compliance with the letter and spirit of equal opportunity principles
- to collect, compile, and make available to members data and information relative to public transit
- to assist in the training, education, and professional development of all persons involved in public transit
- to engage in any other activities which will serve the members and promote public transit

APTA is organized to function on behalf of all of transit's diversified interests. It is governed by a Board of Directors with voting control and authority vested in transit policy board members, transit operating officials, and associate members who are elected by the membership.

This book includes in Sections A and B aggregate information for all transit systems in the United States. *Except as noted, prior-to-1984 data exclude commuter railroad, automated guideway, urban ferry boat, and demand response, as well as most transit systems outside of urbanized areas. Data for these systems were not available prior to that date; accordingly, all data tables are non-continuous between 1983 and 1984.* Non-transit services such as taxicab, school bus, unregulated jitney, sightseeing bus, intercity bus, and special application mass transportation systems (e.g., amusement parks, airports, and international, rural, rural interstate, island, and urban park ferries) are excluded from all tables. Beginning in 1984, only active vehicles are counted in vehicle tables to conform with data reported to the Urban Mass Transportation Administration of the U.S. Department of Transportation (UMTA).

Data reported in Section C, the United States Urban Mass Transportation Act, are for all mass transportation operations and agencies qualifying under provisions of the laws cited in each table. Federal government funding data are based on reports prepared by the United States Department of Transportation.

Data reported in Section D, Statistical Trends of Canadian Transit Operations, are taken from **Urban Transit Facts in Canada** published by the Canadian Urban Transit Association. The data are for all regular transit service provided by CUTA transit system members. Section D is the only section in which Canadian data appear.

Beginning in 1984, data used by APTA to compile Sections A and B of this book are based on **National Urban Mass Transportation Statistics**, published by UMTA. This document is the annual summary of reports submitted to UMTA to comply with

requirements of Section 15 of the Urban Mass Transportation Act of 1964, as amended.

Data for prior years were voluntarily provided by APTA member United States transit systems. All data are expanded by standard statistical methods to provide estimates of statistical trends for all United States transit systems.

The initial adoption of the Section 15 requirements effective in 1979 resulted in several alterations to previous transit recordkeeping practices. Passenger data are collected for Section 15 by a sample survey technique not normally used by transit systems prior to Section 15 implementation. This has resulted in a break in the continuity of APTA Passenger Trip data in Tables 15 & 17 between 1980 and the preceding line. Passenger Trip data reported in these tables are Total Passenger Rides before 1980 and Unlinked Transit Passenger Trips beginning in 1980.

Salaries and Wages data prior to 1977 in Table 28 include employee compensation in the form of paid sick leave, paid vacation time, and paid holidays. Beginning in 1977 these compensation types are included in Fringe Benefit costs. Prior to 1980, the Number of Employees is the average number of persons during the year. Beginning in 1980, the Number of Employees is based on the concept of Employee Equivalents where each Employee Equivalent is equal to 2,000 labor hours.

Because of the time required for transit systems to compile and report the large amount of data for this book, data for the last two calendar years reported are preliminary and will be refined when additional data become available. Changes in data reported for prior years, evident when comparing this book to previous editions, were made from subsequent availability of additional or updated data.

SECTION A

Profile of U.S. Transit

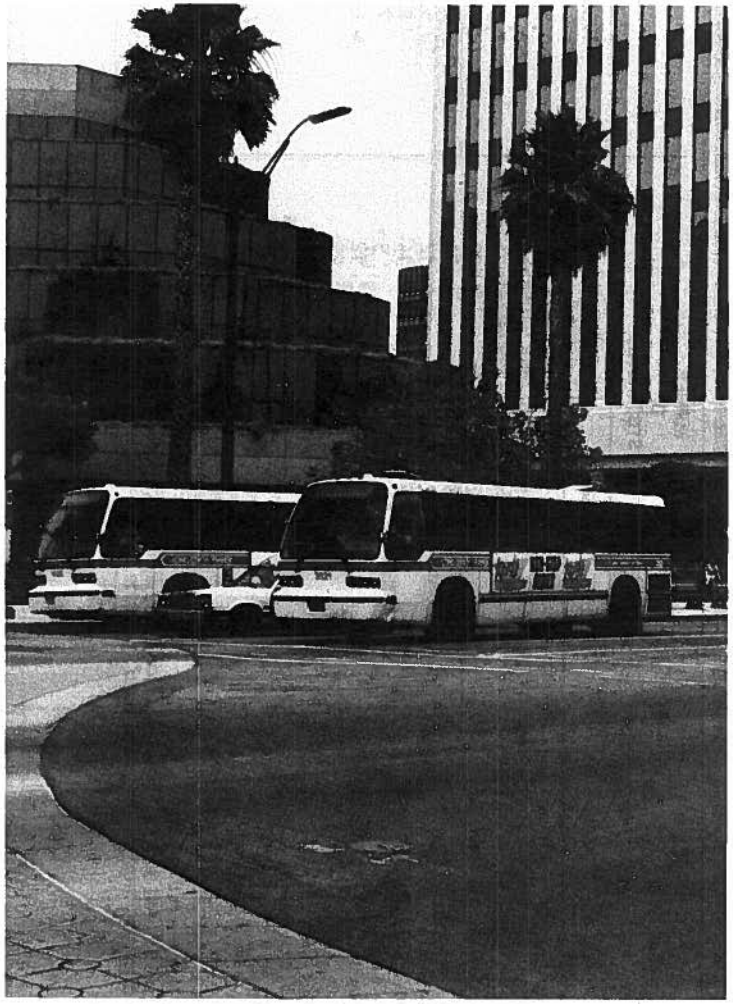

TABLE 1

Transit Modal Statistics at a Glance

MODE	NUMBER OF SYSTEMS(a)		ACTIVE VEHICLES	
	1988	1987	1988	1987
Motor Bus	2,671	2,671	60,388	61,000
Urbanized Area Fixed-Route	751	751	52,716	53,458
Other Fixed-Route	1,920	1,920	7,672	7,542
Demand Response	2,582	2,580	18,190	17,717
Vanpool	23	21	940	904
Heavy Rail	12	12	10,539	10,168
Light Rail	15	14	831	766
Trolleybus	5	5	710	671
Commuter Railroad	12	12	4,649	4,686
Ferry Boat (b)	23	25	88	92
Cable Car	1	1	44	44
Inclined Plane	4	4	10	10
Aerial Tramway	1	1	2	2
Automated Guideway	5	4	99	88
Total	5,036	5,044	96,490	96,148

All data are preliminary.
(a) Total is not sum of all modes since many systems operate more than one mode.
(b) Excludes international, rural, rural interstate, island, and urban park ferries.

TABLE 1 (continued)

Transit Modal Statistics at a Glance

MODE	OPERATING EMPLOYEES		VEHICLE MILES OPERATED (MILLIONS)	
	1988	1987	1988	1987
Motor Bus	153,553	160,822	1,866.0	1,926.6
Urbanized Area Fixed-Route	138,119	144,581	1,750.4	1,811.4
Other Fixed-Route	15,434	16,241	115.6	115.2
Demand Response	29,445	25,281	381.5	304.7
Heavy Rail	46,269	51,334	517.5	490.2
Light Rail	3,930	3,818	20.8	18.4
Trolleybus	2,032	2,112	14.7	15.0
Commuter Railroad	22,603	23,107	201.2	188.7
Ferry Boat (b)	2,807	2,805	1.9	2.0
Other (a)	577	547	16.8	16.2
Total	261,216	269,826	3,020.4	2,961.8
Total Motor Bus Mile Equivalents			3,807.1	3,749.3

All data are preliminary.
(a) Includes cable car, inclined plane, aerial tramway, vanpool, and automated guideway.
(b) Excludes international, rural, rural interstate, island, and urban park ferries.

TABLE 1 (continued)

Transit Modal Statistics at a Glance

MODE	UNLINKED PASSENGER TRIPS (MILLIONS)		PASSENGER MILES (MILLIONS)	
	1988	1987	1988	1987
Motor Bus	5,754	5,624	21,332	20,977

P = Preliminary -- Data not available

*Publicly owned transit systems include all transit systems owned by municipalities, counties, regional authorities, states, or other governmental agencies including transit systems operated or managed by private firms under contract to governmental agency owners. Series not continuous between 1980 and 1985. Data prior to 1985 exclude commuter railroads, urban ferry boats, demand response, and some transit systems in non-urbanized areas.

-- Data not available

(a) Transit systems operating at least one fixed route within an urbanized area. Systems operating in two or more states are counted in the state in which they operate the largest portion of their service.

(b) Transit systems receiving funds under the provisions of the Urban Mass Transportation Act of 1964, as amended, Section 18. Includes service providers operating fixed-route only, demand-response only, and combined fixed-route and demand-response service. Excludes providers also providing urbanized area service.

(c) Transit service providers receiving funds under the provisions of the Urban Mass Transportation Act of 1964, as amended, Section 16(b)2. Excludes service providers also providing urbanized area or small urban and rural service.

Data estimate for Small Urban and Rural Transit Systems and Non-Profit Elderly and Disabled Service Providers based on A *Directory of Rural and Specialized Transit Operators*, U.S. Department of Transportation, June 1986.

TABLE 6

Milestones in U.S. Transit History

Year	Event
1630	Boston--reputed first publicly operated ferry boat
1740	New York--reputed first use of ox carts for carrying of passengers
1827	New York--first horse-drawn urban stagecoach line (Dry Dock & East Broadway)
1830	Baltimore--first railroad (Baltimore & Ohio Railroad Co.)
1832	New York--first horse-drawn street railway line (New York & Harlem Railroad Co.)
1835	New Orleans--oldest street railway line still operating (New Orleans & Carrollton line)
1838	Boston--first commuter fares on a railroad (Boston & West Worcester Railroad)
1850	New York--first use of exterior advertising on street railways
1856	Boston--first fare-free promotion
1861	New York--first failed attempt to form street railway labor organization
1868	New York--first cable-powered (& first elevated) line (West Side & Yonkers Patent Railway)
1870	New York--first pneumatic-powered (& first underground) line (Beach Pneumatic Railroad Co.)
1870	Pittsburgh--first inclined plane
1871	New York--first steam-powered elevated line (New York Elevated Railroad Co.)
1872	Great Epizootic horse influenza epidemic in eastern states kills thousands of horses (the motive power for most street railways)
1873	San Francisco--first successful cable-powered line (Clay St. Hill Railroad)
1875	New York--first publicly operated rail line (Brooklyn Bridge cable line)
1882	Boston--American Street Railway Association (APTA's original predecessor) formed
1883	New York--first surviving street railway labor organization (Knights of Labor Local 2878)
1884	Cleveland--first electric street railway line (East Cleveland Street Railway)
1884	first transit publication (The Street Railway Journal)
1886	New York--first recorded strike by street railway workers (Third Avenue & Sixth Avenue Elevateds)
1886	Montgomery, AL--first semi-successful citywide street railway system (Capital City Street Railway Co.)

TABLE 6 (continued)

Milestones in U.S. Transit History

Year	Event
1888	Richmond, VA--first successful electric street railway line (Union Passenger Railway)
1889	New York--first major strike by street railway workers
1892	Indianapolis--first national street railway labor union founded (Amalgamated Association of Street Railway Employees of America, now called the Amalgamated Transit Union)
1893	Portland, OR--first interurban rail line (East Side Railway Co.)
1894	Boston--first public transit commission (Boston Transit Commission)
1895	Chicago--first electric elevated rail line (Metropolitan West Side Elevated Railway)
1897	Boston--first electric underground (& first publicly-financed) street railway line (West End Street Railway)
1898	Chicago--first electric multiple-unit controlled rail line (Chicago & South Side Rapid Transit Railroad Co.)
1904	New York--first electric underground (& first 4-track express) heavy rail line (Interborough Rapid Transit Co.)
1905	New York--first public takeover of a private transit company (Staten Island Ferry)
1905	New York--first motor bus company (Fifth Avenue Coach Co.)
1906	Monroe, LA--first public takeover of a street railway
1908	New York--first interstate underground heavy rail line (Hudson & Manhattan Railroad to New Jersey)
1910	Hollywood, CA--first trolleybus line (Laurel Canyon Utilities Co.)
1912	San Francisco--first publicly operated street railway in a large city (San Francisco Municipal Railway)
1912	Cleveland--first street railway to operate motor buses (Cleveland Railway)
1914	Los Angeles--first jitney
1917	New York--last horse-drawn street railway line closed
1920	first motor bus not based on truck chassis (Fageol Safety Coach)
1921	New York--first successful trolleybus line
1923	Bay City, MI, Everett, WA, Newburgh, NY--first cities to replace all streetcars with motor buses
1926	highest peacetime transit ridership before World War II (17.2 billion)

TABLE 6 (continued)

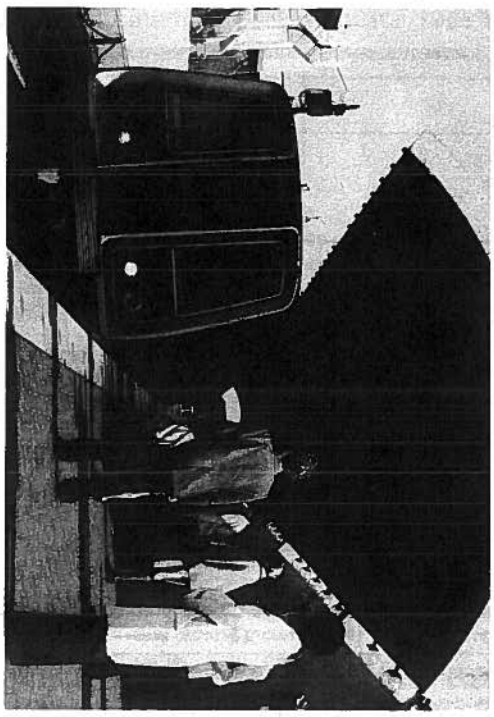
Milestones in U.S. Transit History

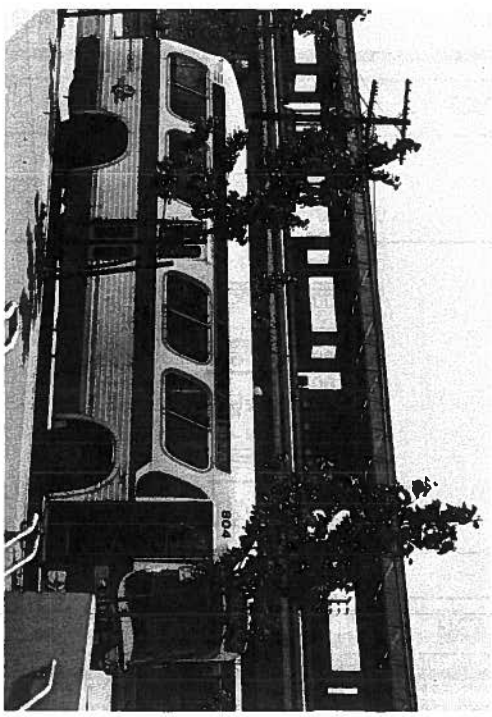
Year	Event
1927	Detroit--first motor bus without cowl-type engine
1927	Philadelphia--first automobile park and ride lot and first bus-rail transfer facility for a non-commuter rail line
1932	New York--first publicly operated heavy rail line (Independent Subway)
1933	San Antonio--first large city to replace all streetcars with motor buses
1934	New York--Transport Workers Union of America founded
1935	Washington--Public Utility Holding Company Act of 1935 enacted requiring most power companies to divest themselves of transit operations and eliminating much private transit financing
1936	motor bus manufacturers began to assume control of or influence street railways, leading to rapid replacement of streetcars with motor buses
1936	New York--first industry-developed standardized street railway car (P.C.C. car) (Brooklyn & Queens Transit System)
1938	Chicago--first use of federal capital funding to build a transit rail line
1939	Chicago--first street with designated bus lane
1940	first time motor bus ridership exceeded street railway ridership
1940	San Francisco becomes last surviving cable car system
1946	highest-ever transit ridership (23.4 billion)
1952	San Francisco--last new PCC car for U.S. transit system placed in service
1961	Washington--first significant federal transit legislation (Housing & Urban Development Act of 1961)
1962	Seattle--first monorail (Seattle World's Fair)
1962	New York--first automated heavy rail line (Grand Central Shuttle)
1963	Chicago becomes last surviving city with interurban line (Chicago, South Shore, & South Bend Railroad)
1964	Washington--creation of Urban Mass Transportation Administration (Urban Mass Transportation Act of 1964)
1966	New York--first public takeover of commuter railroad (Long Island Rail Road Co.)
1966	Providence--first statewide transit system (Rhode Island Public Transit Authority)
1966	Washington--Urban Mass Transportation Administration moved to new Department of Transportation

TABLE 6 (continued)

Milestones in U.S. Transit History

Year	Event
1968	Minneapolis–first downtown transit mall (Nicollet Mall)
1968	Cleveland–first rail station at an airport opened
1969	Washington–first transitway (Shirley Highway)
1969	Philadelphia–first modern heavy rail system replacing former rail line (Port Authority Transit Corporation)
1970	Fort Walton Beach, FL–first dial-a-ride demand response bus
1971	Washington–first federally subsidized intercity railroad providing commuter service (AMTRAK)
1972	San Francisco–first computer-controlled heavy rail system (Bay Area Rapid Transit District)
1972	transit ridership hits all-time low (5.3 billion)
1973	Washington–transit service required to be accessible to disabled (Rehabilitation Act of 1973)
1973	Boston, Dayton, OH, Philadelphia, San Francisco, & Seattle become last surviving trolleybus systems
1974	Boston, Cleveland, Newark, New Orleans, Philadelphia, Pittsburgh, & San Francisco become the last surviving street railway systems
1974	Washington–first federal transit operating assistance legislation (National Mass Transportation Assistance Act of 1974)
1974	American Public Transit Association formed from merger of 2 organizations
1975	Morgantown, WV–first automated guideway peoplemover (West Virginia University)
1977	San Diego–first wheelchair-lift-equipped fixed-route bus
1979	Seattle–first successful wheelchair-lift-equipped fixed-route bus service
1979	Washington–first standardized transit data accounting system (Section 15)
1980	San Diego–first completely new light rail system (San Diego Trolley)
1982	Washington–transit trust fund for capital projects created thru dedication of one cent of federal gas tax





SECTION B

Statistical Trends of Transit Finances and Operations

TABLE 7

Transit Financial Statement for 1988 and 1987

	REVENUES	
	1988	1987
Passenger Revenue	$ 5,504,600,000	$ 5,171,200,000
Other Operating Revenue	856,900,000	776,700,000
Total Operating Revenue	$ 6,361,500,000	$ 5,947,900,000
State and Local Operating Assistance	$ 8,103,700,000	$ 7,160,600,000
Federal Operating Assistance	950,200,000	895,200,000
Total Operating Assistance	$ 9,053,900,000	$ 8,055,800,000
Total Revenue	$15,415,400,000	$14,003,700,000

All data are preliminary.

Transit Financial Statement for 1988 and 1987

	EXPENSES	
	1988	1987
Vehicle Operations Expense	$ 6,403,700,000	$ 6,066,000,000
Vehicle Maintenance Expense	3,030,900,000	2,901,700,000
Non-Vehicle Maintenance Expense	1,533,300,000	1,428,700,000
General Administration Expense	3,249,000,000	2,979,000,000
Purchased Transportation Expense	$ 792,100,000	$ 636,200,000
Total Operating Expense	15,009,000,000	14,011,600,000
Depreciation and Amortization	$ 1,447,200,000	$ 1,261,300,000
Other Reconciling Items	816,200,000	749,400,000
Total Reconciling Items	$ 2,263,400,000	$ 2,010,700,000
Total Expense	$17,272,400,000	$16,022,300,000

All data are preliminary.

NOTE: The difference between Total Revenue and Total Expense is due to several factors including (1) use of the accrual system of accounting rather than the cash system of accounting, (2) amalgamation of accounts of transit systems recording revenue and expense is a variety of fiscal or calendar years, (3) inclusion of State and Local Financial Assistance classified as operating assistance for income accounting purposes but subsequently transferred to capital accounts for expenditure, (4) inclusion of Depreciation and Amortization costs in Total Expense that are met from revenue sources not included in Total Revenue, (5) exclusion of extraordinary revenues and extraordinary expenses, (6) actual profit or loss of privately owned transit systems, and (7) actual surplus or deficit of publicly owned transit systems.

NOTE: Excludes automated guideway and commuter railroad data and transit systems operating only heavy rail or light rail.

(a) Number of transit systems reporting data for category and year. Percentages are for the sample only; not expanded to include all transit systems. A part of the variation in percentage values from year to year may result from changes in which transit systems comprise the sample groups rather than from actual changes in values for all transit systems.

(b) Systems directly operating two or more of the following modes: motor bus, heavy rail, light rail, trolleybus, urban ferry boat, or inclined plane.

TABLE 13

Transit Operating Expense for 1988 Classified By Function and Object Class (Total Dollars in Millions)

P 1988	2,308	325	5,281	310	234	99	214	96	8,867

P = Preliminary -- Data not available

(a) Total Passenger Rides from 1960 through 1979 based upon individual transit system data collection procedures. Unlinked Passenger Trips beginning in 1980 based on data collection procedures defined by Urban Mass Transportation Act, Section 15. Prior to 1984, excludes demand response and most rural and smaller systems. Series not continuous between 1983 and 1984.

(b) From 1960 through 1970 transit systems assigned by population of headquarters city.

(c) From 1975 through 1980 transit systems assigned by population of urbanized area based on 1970 United States Census of Population.

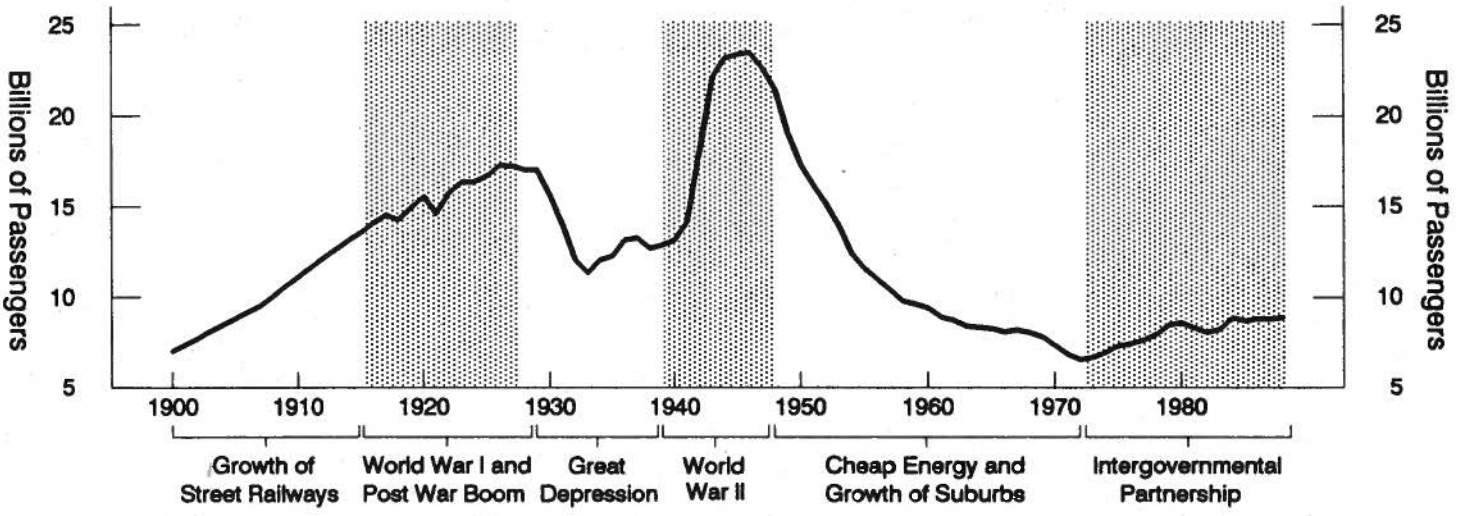
(d) From 1981 through 1987 transit systems assigned by population of urbanized area based on 1980 United States Census of Population.

(e) Excludes commuter railroad, cable car, inclined plane, automated guideway, and urban ferry boat prior to 1975.

(f) Includes suburban and other surface lines not allocated to population groups prior to 1975.

TABLE 16

Major Trends of Transit Ridership



Transit ridership has gone through six major cycles of growth and decline during the Twentieth Century influenced by social and economic forces external to transit. From 1900 to 1929 transit ridership grew steadily; first due to technical innovation and investment opportunities during the early development of street railways and then due to the economic boom of World War I and the post-war period. The Great Depression caused a steep decline in ridership between 1929 and 1939 as people made fewer work trips and often could not afford to take pleasure trips. A new federal law limiting utilities' ability to subsidize transit, as had been normal practice, led to a decline in transit capital facilities. World War II caused motor fuel rationing and an economic boom that led to a new rapid growth cycle in transit ridership. Ridership quickly declined from artificially high war levels as people fled to suburbs spurred on by cheap fuel and government policy favoring low-density suburban growth. In 1973 the ridership cycle reversed again and transit began a modest growth based on a partnership of local, state, and federal government committed to improving America's transportation infrastructure.

P 1988	62.1	275	Free	66.2(d)	7.8	30.2	33.2

P = Preliminary -- Data not available

(a) Includes transfer charges and zone charges; includes reduced-fare trips, free-fare trips, and free-transfer trips.
(b) Unweighted average of adult cash fares, fixed-route service; excludes transfer, premium, or zone charges; each transit system counted equally.
(c) Percents represent a 300-transit-system sample, not estimated for all transit systems.
(d) Calculation based on basic Adult Cash Fare only. Excludes (b) in excess of Adult Cash Fare.
(e) Excludes commuter railroad, automated guideway, urban ferry boat, demand response, and most rural and smaller systems prior to 1984. Series not continuous between 1983 and 1984.

P = Preliminary -- Data not available

*Excludes commuter railroad, automated guideway, urban ferry boat, demand response, and most rural and smaller systems prior to 1984. Series not continuous between 1983 and 1984.
(a) Beginning 1980 equals employee equivalents of 2,000 labor hours each.
(b) Excludes an estimated 10,000-20,000 individuals not employed by transit systems whose compensation is classified as "services."
(c) Includes conductors.

TABLE 27

Trend of Transit Operating Employees by Mode (a)(b)

CALENDAR YEAR	RAILWAY			TROLLEY BUS	MOTOR BUS	DEMAND RESPONSE	OTHER	TOTAL
	LIGHT RAIL	HEAVY RAIL	COMMUTER RAIL					
1984	3,242	47,047	21,884	2,012	154,326	23,798	3,100	255,409
1985	2,980	49,670	22,929	1,893	157,581	23,767	3,217	262,037

SECTION C

The United States Urban Mass Transportation Act

History and Provisions of the Urban Mass Transportation Act of 1964, as Amended

In 1964 the Congress of the United States were that "the welfare and vitality of urban areas, the satisfactory movement of people and goods within such areas, and the effectiveness of housing, urban renewal, highway, and other federally aided programs were being jeopardized by the deterioration or inadequate provision of urban transportation facilities and services. . . ." To remedy this situation, Congress enacted the Urban Mass Transportation Act of 1964 which provided a program for transit systems to purchase capital equipment.

Continuing this commitment into its third decade, Congress appropriated more than $3.2 billion for assistance to mass transportation during Fiscal Year 1988. The FY 1988 Continuing Resolution (P.L. 100-202) includes $804.7 million for operating assistance and $927.6 million in capital assistance allocated to urbanized areas on a formula basis; $64.6 million allocated to rural areas on a formula basis; $1,065.3 million of discretionary capital funding; $123.5 million for capital transfers from interstate highway projects; $180.5 million for Washington, D.C. Metro; and $44.1 million for research, training, and UMTA administration.

A variety of federal assistance programs has evolved over the years due to changing transit needs and changing federal objectives. Landmarks in this evolution include:

- 1961: The Housing and Urban Development Act of 1961 provided funding for transit demonstrations and loans for mass transportation projects.

- 1964: The Urban Mass Transportation Act of 1964 (UMT Act of 1964) established the Urban Mass Transportation Administration (UMTA) within the Department of Housing and Urban Development to administer a program of capital grants to transit systems.

- 1966: The Urban Mass Transportation Act of 1966 expanded funding for capital purchases and allowed funding for research, planning, and training.

- 1966: The Urban Mass Transportation Administration was moved to the newly created Department of Transportation (DOT).

- 1970: The Urban Mass Transportation Assistance Act of 1970 provided increased levels of federal funding by authorizing a $3.1 billion program of capital grants.

- 1973: The Federal-Aid Highway Act of 1973 increased the federally funded portion of transit capital projects from two-thirds to 80% and authorized expenditure of Federal-Aid Urban Systems highway funds and Interstate Highway Transfers for qualifying transit projects.

- 1974: The National Mass Transportation Assistance Act of 1974 increased authorizations for discretionary capital funding and created a formula grant program to allocate funding directly to urbanized areas that could be used for either operations or capital projects.

- 1978: The Federal Public Transportation Act of 1978, Title III of the Surface Transportation Assistance Act of 1978 (STA Act of 1978) expanded the formula grant program and divided it into categorical programs that included additional operating grants for fixed guideway systems, capital grants for bus purchases, and operating grants for places outside of urbanized areas.

- 1982: The Federal Public Transportation Act of 1982, Title III of the Surface Transportation Assistance Act of 1982 (STA Act of 1982) provided that 1¢ of a 5¢ increase in the Highway Trust Fund users' fee on motor fuels would be placed into a Mass Transit Account for capital projects, increased the portion of all funding allocated through the formula grant program, and altered the formula grant program allocation formula to include transit service data as well as population data.

(a) Urban Mass Transportation Act of 1964, as amended: Section 3 and Section 16(b) 2.
(b) Urban Mass Transportation Act of 1964, as amended: Section 5, Section 9A, Section 9, and Section 18.
(c) Federal Aid Highway Act of 1973, as amended; Federal Aid Urban Systems and Interstate Transfer; and National Capital Transportation Act of 1969, as amended.
(d) Nine-year Total.

● 1987: The Federal Mass Transportation Act (FMTA) of 1987, Title III of the Surface Transportation and Uniform Relocation Assistance Act of 1987 (P.L. 100-17), authorizes the federal transit program through Fiscal Year 1991, increases the level of authorization for the formula and discretionary programs, and provides that a portion of the Mass Transit Account may be allocated for capital purposes on a formula basis.

Transit systems receive the majority of their funding through five continuing programs which allocate funding to urbanized areas or states by formula. In each case, the amount allocated to an urbanized area or state is equal to the ratio of the data for that urbanized area or state to the sum of data for all eligible urbanized areas or states. These programs, identified by section number in the UMT Act of 1964, as amended, are:

Section 3 Original grant program, begun in FY 1964, provides capital assistance to eligible transit projects selected by the Urban Mass Transportation Administration or "earmarked" by Congress. This program is known as "discretionary funding."

Status: Authorized through FY 1991.

Recipients of Funds: State or local public bodies and agencies making application based on discretion of UMTA and Congress, and availability of funds. Specific categories of expenditures may have amounts "earmarked" during the legislative process. After providing funds for Sections 4(i), 8, 16(b)(2), and university research programs, 40% of the funds is reserved for new starts and extensions, 40% for rail modernization grants, 10% for major bus projects and 10% is unspecified discretionary.

Eligible Expenditures: For capital projects only.

Method of Allocation: Discretionary.

Matching Ratio: 75% federal, 25% state and local.

Source of Funds: The Mass Transit Account of the Highway Trust Fund.

Section 9 This program allocates operating and capital assistance on a formula basis to urbanized areas. Funding is authorized through Section 21(a) of the UMT Act of 1964, as amended.

Status: Authorized through FY 1991.

Recipients of Funds: Directly to urbanized areas over 200,000 population, through state governors under 200,000 population.

Eligible Expenditures: For operations or capital projects by local decision up to a limit equal to a percentage of the sum of FY 1982 Section 5, Tiers I, II, and III allocation for each urbanized area. Percentage limitations are 80% for urbanized areas over 1,000,000 population; 90% for urbanized areas between 200,000 population

(a) Motor bus and trolleybus.
(b) Heavy rail and light rail.
(c) Urban ferry boat, cable car, inclined plane, and automated guideway transit.
(d) Twelve-year total.
(e) Planning grants from Section 9A, Section 9 and Interstate Transfer.

Source: U.S. Department of Transportation, Urban Mass Transportation Administration.

and 1,000,000 population; and 95% for urbanized areas less than 200,000 population. Urbanized areas newly designated by the 1980 Census or later are eligible to use for operations up to two-thirds of their first full-year Section 9 apportionment. The remaining portion of each urbanized area's allocation may be used only for capital projects.

Beginning in FY 1989, small urban areas between 50,000-200,000 in population will have their operating assistance limitations adjusted annually for inflation.

Method of Allocation: By formula. Funds are allocated for Section 9, 9(B) and 18 in seven subsections that are equal to percentages of the total amount authorized under Section 21(a), 21(b) and 21(c) of the FMTA of 1987. The percent of funding for each urbanized area in a subsection with a formula based on transit operating data varies each year because of variations in the transit operating data. These subsections, designated by funding type, are:

(1) Fixed guideway operations in urbanized areas over 200,000 population, basic formula, 28.15% of Section 21(a) authorization. The formula is 60% fixed guideway revenue vehicle miles operated and 40% fixed guideway route miles. Urbanized areas over 750,000 population that have commuter rail operations receive a minimum of 0.75% of this subsection.

(2) Fixed guideway operations in urbanized areas over 200,000 population, incentive formula, 1.29% of Section 21(a) authorization. The formula is the number of fixed guideway passenger miles traveled multiplied by the number of fixed guideway passenger miles traveled per dollar of operating cost. Urbanized areas over 750,000 population that have commuter railroad operations receive a minimum of 0.75% of this subsection.

(3) Bus operations in urbanized areas over 1,000,000 population, basic formula, 39.31% of Section 21(a) authorization. The formula is 50% bus revenue vehicle miles operated, 25% urbanized area population, and 25% urbanized area population density weighted by population.

(4) Bus operations in urbanized areas from 200,000 to 1,000,000 population, basic formula, 14.25% of Section 21(a) authorization. The formula is 50% bus revenue vehicle miles operated, 25% urbanized area population, and 25% urbanized area population density weighted by population.

(5) Bus operations in urbanized areas over 200,000 population, incentive formula, 5.43% of Section 21(a) authorization. The formula is the number of bus passenger miles traveled multiplied by the number of bus passenger miles traveled per dollar of operating cost.

(6) Mass transportation operations in urbanized areas less than 200,000 population, 8.64% of Section 21(a) authorization. The

formula is 50% urbanized area population and 50% urbanized area population density weighted by population.

(7) Mass transportation operations outside of urbanized areas, 2.93% of Section 21(a) and (b) under Section 9(B) authorization. These allocations are made through Section 18 procedures. Congress may provide additional "bonus" appropriations.

Matching Ratios: Operating assistance; federal share up to 50% of operating expense less earned revenue, including passenger fares, to the limit of available federal funds. State and local operating assistance share must equal or exceed federal operating assistance share. Capital assistance: 80% federal, 20% state and local.

Source of Funds: General revenues and a portion of the Mass Transit Account (see Section 9(B) below).

Section 9(B) Established by the FMTA of 1987. One half of all Mass Transit Account funds exceeding $1 billion annually are distributed to all recipients through the Section 9 program for capital purposes only. Section 18 recipients receive a 2.93% share of Section 9(B) as well as their share of Section 9 (both from general revenues) for capital and operating purposes. Funds represent contract authority and are available for four years, including the year of apportionment, after which they are reapportioned via the formula program.

Section 16(b)2 Established by the Urban Mass Transportation Act of 1970 to assure the availability of mass transportation to elderly and disabled persons.

Status: Authorized through FY 1991.

Recipients of Funds: Private, non-profit corporations and associations providing mass transportation services for the elderly and disabled through state governors.

Eligible Expenditures: For capital equipment and state administrative costs.

Method of Allocation: By formula. Funds are allocated to states based on population of elderly and disabled individuals with a fixed minimum amount for each state.

Matching Ratio: 80% federal, 20% state and local.

Source of Funds: The Mass Transit Account of the Highway Trust Fund.

Section 18 Established by the STA Act of 1978 to allocate funds for mass transportation in rural areas outside of urbanized areas.

Status: Authorized through FY 1991.

Recipients of Funds: Mass transportation providers outside of urbanized areas through state governors.

Glossary of Federal Terms

Authorization: Legislation that creates the structure of a program including any formulas and guidelines for awarding funds. Authorizing legislation may set an upper limit on program spending or may be open ended as in "such sums as may be necessary." General revenue funds to be spent under an authorization must be appropriated by separate legislation.

Appropriation: Legislation that grants money from general revenues to a program that usually has been authorized previously by other legislation. The amount of money appropriated may be less than the amount authorized.

Apportionment: Approval by the Office of Management and Budget for an agency to spend funds appropriated by Congress. The public reporting of the OMB approved apportionment, detailing the amount of formula funding available to each urbanized area or designated recipient, is done by UMTA and is commonly referred to as "the apportionment."

Budget Authority: Authority to enter into obligations which will result in immediate or future outlays. The basic forms of budget authority are appropriations, authority to borrow, and contract authority.

Contract Authority: A type of budget authority that permits an agency to incur specific obligations. Contract authority does not provide the money to pay the obligation; it must be followed by an "appropriation to liquidate" any obligations incurred.

Funding Commitment: Spending of obligated money by a grant recipient.

Grant: Money received by a non-federal agency eligible to receive federal funding under the provisions of authorizing legislation with funding provided by appropriations legislation.

Obligation: An action by an administrative agency approving the spending of money for a specific purpose to a specific grant recipient.

Outlays: Value of money actually spent in a given time period. Outlays include checks issued, interest debt accrued, and other payments. An excess of outlays compared to revenue results in a deficit.

Eligible Expenditures: For operations or capital projects.

Method of Allocation: By formula. Funds are authorized in Section 21(a) and (b) under Section 9(B) of the UMT Act of 1964, as amended, to be allocated through Section 18 procedures. Formula is non-urbanized area population of each state.

Matching Ratio: Operating assistance: not to exceed 50% of net cost up to an amount equal to the sum of state and local operating assistance. Capital assistance: 80% federal, 20% state and local.

Source of Funds: General revenues.

Section 18(h) Established by the FMTA of 1987 to carry out a rural transit assistance program in non-urbanized areas. Grants are available for research, technical assistance, training and related support services.

Interstate Transfers Introduced in the Federal-Aid Highway Act of 1973, allows substitution of transit projects in urban areas for non-essential Interstate Highway projects.

Status: Authorized through FY 1991.

Recipients of Funds: Any eligible state or local government agency.

Eligible Expenditures: For capital projects only.

Method of Allocation: Upon application by state governor and local government agency; 50% of funding at the discretion of the Secretary of Transportation, 50% in accordance with cost estimates approved administratively or by Congress. Specific areas may have amounts "earmarked" during the legislative process.

Matching Ratio: 85% federal, 15% state and local.

Source of Funds: General revenues.

SECTION D

Statistical Trends of Canadian Transit Operations

TABLE 39

Canadian Transit Operations: Summary Statistics

CALENDAR YEAR	NUMBER OF SYSTEMS	REVENUE PASSENGER TRIPS	TOTAL VEHICLE MILES	OPERATING REVENUE(a)	OPERATING EXPENSE(a)
		(MILLIONS)	(MILLIONS)	(MILLIONS)	(MILLIONS)
1950	33	1,395.7	248.5	$ 85.5	$ 75.2
1955	32	1,119.3	184.3	109.2	98.8
1960	34	973.2	184.3	133.0	116.4
1965	39	941.5	198.1	154.8	140.0
1970	49	979.7	242.0	239.5	231.1
1975	61	1,158.9	329.2	326.8	495.6
1976	64	1,214.0	352.9	402.6	607.5
1977	64	1,222.7	366.1	422.7	687.0
1978	65	1,218.1	383.6	448.8	806.5

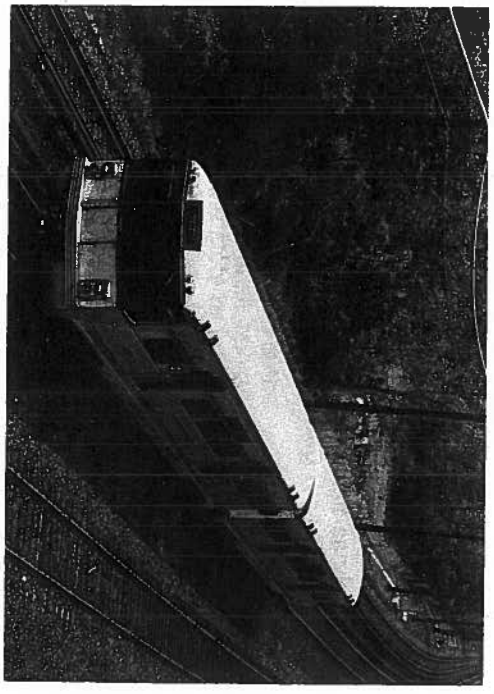
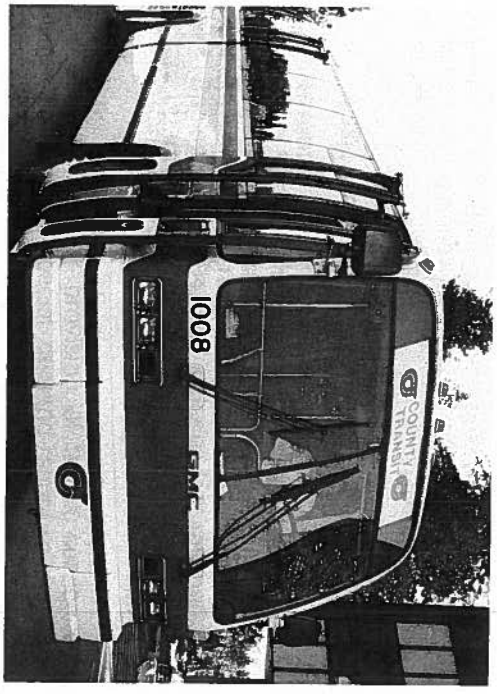
SECTION E

Glossary of Transit Terms





Glossary of Financial Terms

Financial terms used in this book are based on the "Urban Mass Transportation Act of 1964, as amended, Section 15, Uniform System of Accounts and Records." The following definitions of financial terms do not, however, identify specific ledger accounts from "Section 15" or any other accounting system and are not intended to serve as model definitions of financial terms in other publications.

Transit system financial data reported in this book are based on the accrual system of accounting, which records revenues received as well as anticipated and expenses incurred as well as anticipated during the accounting period.

Revenue Terms

(Listed in order of appearance in Table 7)

Passenger Revenue
Fares, including transfer charges and zone charges, paid by transit passengers traveling aboard transit vehicles operating in regular fixed-route and special demand-response service; also known as "farebox revenue." Beginning in 1984, also includes fare revenue retained by contractors operating transit service and not turned over to transit system.

Other Operating Revenue
Revenue derived from (1) provision of transit service other than regular fixed-route and special demand-response service (charter service revenues, special contract fares, and special route guarantees); (2) operations closely associated with provision of transit service, including station and vehicle concessions, and advertising; and (3) transit system facilities or operations not associated with providing transit service, including rental of vehicles and properties, investment income, and "park-and-ride" parking lot revenue.

Total Operating Revenue
Total revenue derived from provision of transit service; the sum of "Passenger Revenue" and "Other Operating Revenue."

State and Local Operating Assistance
Financial assistance for transit operations (not capital expenditures) which originated at the state or local government level.

Federal Operating Assistance
Financial assistance for transit operations (not capital expenditures) which originated at the federal government level.

Total Operating Assistance
The sum of "State and Local Operating Assistance" and "Federal Operating Assistance."

Total Revenue
Total receipts derived from provision of transit service plus additional monies related to provision of transit service but derived from other sources; the sum of "Total Operating Revenue" and "Total Operating Assistance."

Expense Function Class Terms
(Listed in order of appearance in Table 7)

Vehicle Operations Expense
Total expense of all labor, materials, fees, and rents required for operating transit passenger vehicles and passenger stations including all fuels for vehicle propulsion except electric propulsion power.

Vehicle Maintenance Expense
Total expense of all labor, materials, services, and equipment used to repair and to service transit passenger vehicles and service vehicles.

Non-Vehicle Maintenance Expense
Total expense of all labor, materials, services, and equipment used to repair and service transit system way and structures, vehicle movement control systems, fare collection equipment, communication systems, buildings and grounds, and equipment other than vehicles including expense of electric propulsion power for transit passenger vehicles.

General Administration Expense
Total expense of all labor, materials, and fees associated with general office functions, insurance, safety, legal services, and customer services.

Purchased Transportation Expense
Total expense of all labor, materials, and fees paid to companies or organizations providing transit service under contract to a transit system.

Total Operating Expense
The sum of all transit system operating expense: "Vehicle Operations Expense," "Vehicle Maintenance Expense," "Non-Vehicle Maintenance Expense," "General Administration Expense," and "Purchased Transportation Expense."

Depreciation and Amortization
Total decline in value of transit system assets incurred through use of tangible property (depreciation) and intangible property (amortization). Because property is depreciated or amortized on a formula basis over several years, the amount recorded as depreciation or amortization normally does not represent the actual money spent for property in any specific time period.

Many publicly owned transit systems receive financial assistance for the purchase of property (capital assistance). Although the property purchased with capital assistance might be depreciated or amortized and thus reported as an "expense" in this book, any financial

assistance received for the purchase of property is not included in "revenue" or "operating assistance" amounts.

Other Reconciling Items
All transit system expenses in addition to "Total Operating Expense" and "Depreciation and Amortization" including interest expenses and leases and rentals.

Total Expense
Total expenditures related to provision of transit service; the sum of "Total Operating Expense," "Depreciation and Amortization," and "Other Reconciling Items."

Expense Object Class Terms
(Listed in order of appearance in Table 13)

Salaries and Wages
All pay and paid monetary allowances, including overtime, paid to transit employees for performance of specific pieces of work.

Fringe Benefits
All compensation in the form of payments or accruals made to transit employees not for performance of a specific piece of work including sick pay, holiday pay, vacation pay, pension plans, life insurance, health insurance, unemployment insurance, social security, workmen's compensation, and other allowances.

Services
Expense for labor or other work provided by outside organizations for a fee.

Fuel and Lubricants
Expense for gasoline, diesel, other fuels, and vehicle lubricants.

Other Materials and Supplies
Expense for materials and supplies other than "Fuel and Lubricants."

Utilities
Expense for utilities including electric, gas, water, and telephone service, and propulsion power for electric transit vehicles.

Casualty and Liability Costs
Expense for protection of transit system from loss through insurance programs or for compensation of others for losses due to acts for which the transit system is liable.

Purchased Transportation
Total expense of all labor, materials, and fees paid to companies or organizations providing transit service under contract to a transit system.

Other
Expenses not identified in the eight object categories defined above including taxes, expense transfers, and miscellaneous expenses.

Glossary of Non-Financial Terms

Definitions of non-financial terms in this book conform to general usage in transit. Specific terms, however, may vary in meaning when used in other publications or contexts. Definitions used in describing United States Government programs appear on Page 80, "Glossary of Federal Terms."

Active Service Transit Passenger Vehicles
Transit passenger vehicles licensed, where required, and maintained for regular use, including spares and vehicles out of service for maintenance purposes but excluding vehicles in "dead" storage, leased to other operators, in energy contingency reserve status, or permanently not usable for transit service.

Adult Cash Fare (Base Period)
Basic full fare paid by one person for one transit ride; excludes transfer charges, zone charges, express service charges, peak period surcharges, and reduced fares.

Aerial Tramway
System of aerial cables with suspended unpowered passenger vehicles propelled by separate cables attached to the vehicle suspension system and powered by engines or motors at a central location not on board the vehicle.

Average Fare (Revenue) per Unlinked Transit Passenger Trip
"Passenger Revenue" divided by "Unlinked Transit Passenger Trips."

Automated Guideway
Fixed-guideway electric transit vehicles operating without vehicle operators or other crewpersons on board the vehicle.

Cable Car
A type of electric transit vehicle railway operating in mixed street traffic with unpowered, individually-controlled transit vehicles propelled by moving cables located below the street surface and powered by engines or motors at a central location not on board the vehicle.

Capital Employee
An employee involved with construction or capital procurement and who has no involvement with operation of the transit system.

Commuter Railroad
Those portions of "main-line railroad" (not "electric railway") transportation operations which encompass urban passenger train service for local travel between a central city and adjacent suburbs;

commuter railroad service--using both locomotive-hauled and self-propelled railroad passenger cars--is characterized by multi-trip tickets, specific station-to-station fares, railroad employment practices, and usually only one or two stations in the central business district. Also known as "suburban railroad."

Demand-Response Service
A type of non-fixed-route bus or van service characterized by passengers boarding and alighting at any location within the transit provider's service area. Vehicles pickup and discharge passengers at times requested by the passengers by prior arrangement, either by telephone for "dial-a-ride" service, or other prescheduling arrangements.

Downtown People Mover
A type of automated guideway transit operating on a loop or shuttle route within the central business district of a city.

Express Bus Service
Scheduled, fixed-route bus service where a portion of the route is operated without stops or with a limited number of stops to pick up or discharge passengers.

Ferry Boat
Passenger-carrying marine vessel providing frequent "bridge" service over a fixed route and on a published time schedule between two or more points.

Fixed-Route Transit Service
Transit service provided on a repetitive, scheduled basis along a specific route with transit vehicles stopping to pick up and discharge passengers at the same locations each time they traverse the route.

Heavy Rail
A type of electric transit vehicle railway with the capacity for a "heavy volume" of traffic and characterized by exclusive rights-of-way, multi-car trains, high speed and rapid acceleration, sophisticated signaling, and high platform loading. Also known as "subway," "elevated (railway)," or "metropolitan railway (metro)."

Inclined Plane
A type of electric transit passenger vehicle railway operating over exclusive right-of-way on steep grades with unpowered vehicles propelled by moving cables attached to the vehicles and powered by engines or motors at a central location not on board the vehicle.

Light Rail
A type of electric transit vehicle railway with a "light volume" traffic capacity compared to "heavy rail." Light rail may be on exclusive or shared rights-of-way, high or low platform loading, multi-car trains or

single cars, automated or manually operated. In generic usage light rail includes "streetcars," "trolley cars," and "tramways"; in specific usage light rail refers to very modern and more sophisticated developments of these older rail modes.

Major Rehabilitation of Transit Passenger Vehicle
Major rebuilding of a transit passenger vehicle for the purpose of preserving its useful service life.

Metropolitan Railway
See "Heavy Rail."

Mode of Transit Service
Transit service provided by a single type of transit vehicle operated in a particular format of service. Generic modes include motor bus, heavy rail, light rail, commuter rail, cable car, ferry boat, and other modes distinguished by vehicle type. Modes further defined by format of service include fixed-route bus, demand-response bus, and subscription bus among many possible service format alternatives.

Monorail
A type of electric transit vehicle railway with a guideway formed by a single beam or rail which a transit vehicle or train of vehicles either straddles or is suspended from.

Motor Bus
Rubber tired, self-propelled, manually steered transit vehicle with fuel supply carried on board the vehicle. Motor bus types include:

Advanced Design Bus: A type of transit bus, introduced in the mid-1970's and incorporating new styling and design features compared to previous transit buses.

Articulated Bus: A type of transit bus from 55 feet to 60 feet in length with two connected passenger compartments able to bend at their connecting point when the bus negotiates a corner.

Double Deck Bus: A type of transit bus with two separate passenger compartments, one above the other.

Intercity Bus: A standard-size bus equipped with front doors only, high backed seats, luggage compartments separate from the passenger compartment, and usually with restroom facilities, for high-speed long-distance service.

Medium Size Bus: Any bus from 29 feet to 34 feet in length.

New Look Bus: A type of transit bus characterized by the predominant styling and mechanical equipment common to transit buses manufactured between 1959 and 1978.

Sightseeing Bus: A bus of any type adapted for sightseeing use, usually with expanded window areas.

Small Bus: Any bus 28 feet or less in length.

Standard-Size Bus: Any bus from 35 feet to 41 feet in length.

Suburban Bus: A bus similar to a transit bus except equipped with front doors only and normally with high-backed seats for use in longer-distance service with relatively fewer stops.

Transit Bus: A bus designed for frequent-stop service with front and center doors, normally with a rear-mounted diesel engine, low-back seating, and without luggage storage compartments or restroom facilities.

Van: A small vehicle, usually 20 feet or shorter in length, usually with an automotive-type engine and limited seating normally entered directly through side or rear doors of the vehicle rather than from a central aisle, used for door-to-door, vanpool, and other specialized transit service.

Multi-Mode Transit System
A transit system operating more than one mode of transit service.

Operating Employee
An employee involved with operation, maintenance, or administration of the transit system, excluding those involved in construction and capital procurement.

Paratransit Service
All transit service other than fixed-route service. Some types of special services are: variable-route service where a passenger boarding a vehicle can select any discharge point in a service area; demand-response service (also known as dial-a-ride) where a passenger can board and alight at any point in a service area; charter service; subscription service where a group of passengers are carried between the same locations on a repetitive basis; and brokerage service where a transit system or other agency organizes vanpool-type service.

Passenger Miles
The number of person-miles traveled by all passengers riding transit vehicles; one person traveling one mile aboard a transit vehicle is one passenger mile.

Peak Period Surcharge
An extra fee in addition to the basic cash fare required during peak periods (rush hours).

Publicly Owned Transit System
A transit system owned or subsidized by any municipality, county, regional authority, state, or other governmental agency including a transit system operated or managed by a private management firm under contract to the government agency owner.

Rapid Transit
Transit vehicles operating over completely grade-separated exclusive right-of-way. The term rail rapid transit, also known as "rapid rail transit," applies to both operation of light rail vehicles over exclusive right-of-way and operation of heavy rail vehicles; the term bus rapid transit applies to operation of motor buses over exclusive bus roads ("rapid busways").

Revenue Passenger Trips (Revenue Passengers)
Single-vehicle transit rides by initial-board (first-ride) transit passengers only; excludes all transfer rides and all non-revenue rides.

Single-Vehicle Transit Ride
One person traveling aboard one transit vehicle.

Special Service
See "Paratransit Service."

Streetcar
A type of electric transit vehicle railway operated in mixed traffic on streets, usually single cars, manually operated, with boarding from street level rather than platforms. Also known as "trolley car" or "tramway"; included as a type of "light rail" in generic usage.

Total Labor Costs
Sum of "Salaries and Wages" and "Fringe Benefit Costs"; see Glossary of Financial Terms.

Total Motor Bus Mile Equivalents
The number of vehicle miles that would have been operated by a transit mode if the service had been provided by motorbuses. Based on average seating plus standing capacity of the vehicle as compared to the 70-passenger capacity of a standard-size motor bus.

Total Passenger Rides (Total Passengers)
Combined total of all single-vehicle transit rides by (1) initial-board (first-ride) revenue passengers, (2) transfer passengers on second and successive rides, and (3) non-revenue passengers entitled to transportation without charge.

Tramway
See "Light Rail" and "Streetcar."

Transfer Charge
An extra fee in addition to the basic cash fare charged for purchase of a transfer for boarding another transit vehicle to continue a trip.

Transit Passenger Vehicle
Any vehicle used to carry passengers in transit service.

Transit System
Organizations providing any type of intraurban or rural intracommunity multiple-occupancy-vehicle passenger service, including fixed-route service, variable-route service, demand-response service, and unscheduled service, provided for use by the general public or groups of the general public. A system that contracts out its service to one or more private companies or public agencies is counted as one system.

Transitway
Exclusive roadway or lane designated specifically for buses and other high-occupancy vehicles such as vans and carpools. Also called "busways," "high occupancy-vehicle (HOV) lanes," "bus/carpool lanes," and "commuter lanes."

Trolleybus
Rubber-tired electric transit vehicle, manually steered, propelled by a motor drawing current--normally through overhead wires--from a central power source not on board the vehicle.

Unlinked Transit Passenger Trips
Transit trips taken by both initial-board (originating) and transfer (continuing) transit passengers; includes charter rides and special rides. Each passenger is counted each time that person boards a transit vehicle regardless of the type of fare paid or transfer presented.

Urban Ferry Boat
Any ferry boat operation with one or more terminals within an urbanized area, excluding international and urban park ferries.

Urbanized Area
An area delimited by the United States Bureau of the Census consisting of a central city of 50,000 inhabitants or more or two cities having contiguous boundaries and constituting, for general social and economic purposes, a single community with a population of at least 50,000, plus surrounding closely settled territory but excluding the rural portion of extended cities.

Urban Place
An area delimited by the United States Bureau of the Census consisting of incorporated political units or closely settled population centers without corporate limits not within the boundaries of an urbanized area.

Vanpool
A type of transit service in which passengers share a van with one passenger designated "driver." The route is "fixed," but varies as passengers change. Purchase, maintenance, and recruitment of passengers may be handled by a sponsoring transit system. Fares may be charged, or the cost may be divided as agreed by the passengers.

Vehicle Miles Operated
Sum of all miles operated in regular service, special service, and non-revenue service by transit vehicles that carry passengers. When vehicles are operated in trains, each vehicle is counted separately, e.g., an eight-vehicle train operating for one mile equals eight vehicle miles.

Wheelchair Accessible Transit Passenger Vehicle
A transit passenger vehicle equipped with a lift, ramp, or other boarding and safety devices required to allow a person in a wheelchair to use the vehicle. For high platform boarding rail cars, wheelchair accessibility might require elevators or ramps in stations rather than lifts or ramps on the cars.

Zone Fare Charge
An extra fee in addition to the basic cash fare charged when a passenger crosses a predetermined boundary.
