Transit Fact Book

TECHNICAL NOTES

The American Public Transit Association (APTA) and its predecessor has published the **Transit Fact Book** since 1942. APTA obtains data from member transit systems in the United States and uses these figures to estimate trends for all United States transit systems. The **Transit Fact Book** also contains data for Canadian transit systems provided by the Canadian Urban Transit Association (CUTA).

This book includes aggregate information for all transit systems in the United States. Non-transit services such as taxicab, school bus, unregulated jitney, sightseeing bus, intercity bus, and special application mass transportation systems (e.g., amusement parks, airports, and international, rural, rural interstate, island, and urban park ferries) are excluded from all tables.

Except as noted, prior-to-1984 data exclude commuter railroad, automated guideway, urban ferry boat, and demand response, as well as most transit systems outside of urbanized areas. Data for these systems were not available prior to that date; accordingly, all data tables are non-continuous between 1983 and 1984.

Federal government funding data are based on reports prepared by the United States Department of Transportation.

Data reported in the section on Canadian Statistics are taken from **Urban Transit Facts in Canada** published by the Canadian Urban Transit Association. The data are for all regular transit service provided by CUTA transit system members. This section is the only place where Canadian data appear.

Prior to 1984, data are based on information voluntarily provided by APTA member transit systems. All data are expanded by standard statistical methods to provide estimates of statistical trends for all transit systems.

Beginning in 1984, data are also based on the annual Section 15 report published by the Federal Transit Administration (FTA). This document is the annual summary of reports submitted to FTA to comply with requirements of the Federal Transit Act.

Beginning in 1984, motor bus and demand response data are calculated based on 1980 U.S. Census Bureau urbanized area population categories to allow for variances in data by size of area. Beginning in 1990, urbanized areas designated by the 1990 census are used.

Beginning in 1984, only active vehicles are counted in vehicle tables to conform with data reported to FTA.

The initial adoption of the Section 15 requirements effective in 1979 resulted in several alterations to previous transit recordkeeping practices. Passenger data are collected for Section 15 by a sample survey technique not normally used by transit systems prior to Section 15 implementation. This has resulted in a break in the continuity of APTA Passenger Trip data between 1980 and earlier years. Passenger Trip data reported are Total Passenger Rides before 1980 and Unlinked Transit Passenger Trips beginning in 1980.

Salaries and Wages data prior to 1977 include employee compensation in the form of paid sick leave, paid vacation time, and paid holidays. Beginning in 1977 these compensation types are included in Fringe Benefit costs. Prior to 1980, the Number of Employees is the average number of persons during the year. Beginning in 1980, the Number of Employees is based on the concept of Employee Equivalents where each Employee Equivalent is equal to 2,080 labor hours.

Because of the time required for transit systems to compile and report the large amount of data for this book, data for the last two calendar years reported are preliminary and will be refined when additional data become available. Changes in data reported for prior years, evident when comparing this book to previous editions, were made from subsequent availability of additional or updated data.

APTA is the recognized source for statistical data and information about transit in the United States. It is an international organization of transit systems and related organizations in the United States, Canada, and other countries. APTA members serve the public interest by providing safe, efficient, and economical transit services, and by improving those services to meet national energy, environmental, and financial concerns. Over ninety percent of persons using urban public transit in the United States are carried by APTA members.

APTA members total over 1,000 and include motor bus and

rapid transit systems, organizations responsible for planning, designing, constructing, financing, and operating transit systems, business organizations which supply products and services to transit, academic institutions, and state associations and departments of transportation.

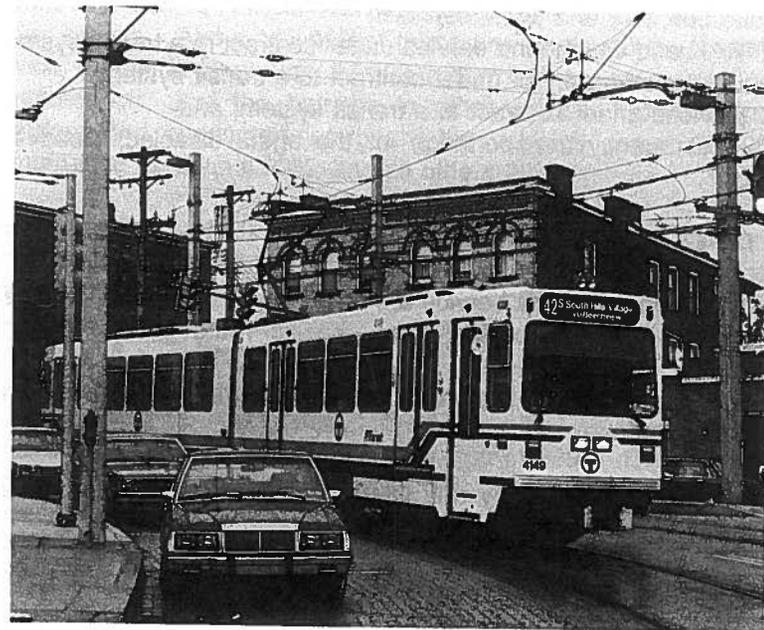

Formed on a cooperative, nonprofit basis, APTA's objectives are:

- to represent the public interest in improving transit for all persons;
- to represent the interests, common policies, requirements, and purposes of the operators of public transit;
- to provide a medium for exchange of experiences, discussion, and comparative study of public transit affairs;
- to promote research and investigation to the end of improving public transit;
- to aid members in dealing with special issues;
- to encourage cooperation among its members, their employees, and the general public;
- to encourage compliance with the letter and spirit of equal opportunity principles;
- to collect, compile, and make available to members data and information relative to public transit;
- to assist in the training, education, and professional development of all persons involved in public transit; and,
- to engage in any other activities which will serve the members and promote public transit.

APTA is organized to function on behalf of all of transit's diversified interests. It is governed by a Board of Directors with voting control and authority vested in transit policy board members, transit operating officials, and associate members who are elected by the membership.

SECTION I

Overview of Transit Facts and Issues

OVERVIEW OF TRANSIT FACTS AND ISSUES

1. TRANSIT DEFINED

Transit includes all multiple-occupancy-vehicle passenger services of a local and regional nature provided for general public use such as:

public bus, rail, and water services;
private bus, rail, and water services;
AMTRAK and Greyhound service under contract to a transit system;
vanpools operated by or under contract to a transit system;
taxi services under contract to a transit system; and,
non-profit agency transportation for the aged, disabled, disadvantaged.

2. TYPES OF TRANSIT SERVICE

Different types of transit service are called modes, which are defined on page 118. All operate on a specific route except demand response.

Road modes include motorbus, trolleybus, vanpool, jitney, and demand response.

Rail modes include heavy rail, light rail, commuter rail, automated guideway, inclined plane, cable car, and aerial tramway.

Water modes include ferryboat.

3. NUMBER OF TRANSIT SYSTEMS

There are over 5,000 transit systems in the U.S. About 2,700 operate motorbus service, 3,900 operate demand response service, and 100 operate other modes. About 1,500 operate more than one mode. Almost two-thirds are non-profit elderly and disabled service providers. The number of providers actually operating transit service is several thousand higher since many systems have several contractors: one system in the Chicago area has over 80.

4. VEHICLES

Transit fleets contain about 100,000 active vehicles. About 62,000 motorbuses, 19,500 demand response vehicles, 10,000 heavy rail cars, and 4,500 commuter rail cars comprise the bulk.

5. EMPLOYEES

It takes over 266,000 employees to operate, maintain, and administer transit service. About 163,000 of those are employed in motorbus service, 47,000 in heavy rail, 27,000 in demand response, 21,000 in commuter rail, and the balance in other modes. Of the total, operators and conductors on board the vehicles comprise 49%, maintenance personnel 28%, and all others 23%.

In addition, there are 9,000 capital employees. Perhaps 10,000 to 20,000 other persons are employed by manufacturers of transit equipment, consultants, engineering firms, local governments, and other transit-related businesses.

6. RIDERS

About 8.5 billion trips were taken on transit in 1992. Of these, 5.5 billion were motorbus trips, about 2.8 billion were on the various rail modes, and the remainder on other road and water modes. An estimated 6.8 million people use transit each weekday. Fifty-four percent of transit trips are worktrips, 52 percent of riders are women, 45 percent are white, 31 percent are black, 18 percent are Hispanic, 6 percent are Asian or Native American, and 1.5 percent are disabled, according to an APTA report (*Americans in Transit: A Profile of U.S. Transit Passengers*, October 1992).

Transit serves two markets:

People in the transit-dependent market have no personal transportation, no access to such transportation, or are unable to drive. Included are those with low incomes, the disabled, elderly, children, families whose travel needs cannot be met with only one car, and

those who opt not to own personal transportation. In 1988, the U.S. Energy Department estimated that 13% of the 91.6 million U.S. households did not own a car, truck, van, motorcycle, or motor scooter, and that another 34% owned only one vehicle.

People in the transit-choice market are workers, environmentalists, travelers, and people on recreational, social, medical, or other journeys who do not have to use transit, but do so for reasons of speed, comfort, convenience, traffic avoidance, or environmental principle.

7. REVENUES

About 75% of transit operating revenues come from the area in which the service is provided: 38% comes from the passengers, 28% from local governments, and 5% from non-government sources. State and federal governments contribute 23% and 6%, respectively.

The mean adult base fare in 1992 was 86 cents, but most passengers pay \$1.00 or more when zone and other charges are included.

Governmental aid comes in two forms: general appropriations taken from all revenues received, and revenue specifically dedicated to transit by law such as a one-half cent sales tax or a one cent gas tax.

Capital revenue is used to fund transit infrastructure. Federal law provides for federal funding to be a maximum of 80% of the project cost, with the remainder to be provided by state and local governments. However, some projects are entirely funded at the local or state level, and many areas provide more than the minimum requirement. Thus, only about 50% of transit capital revenue comes from the federal government.

8. EFFECTS OF FARE INCREASES ON RIDERSHIP

There is a direct relationship between transit fares and ridership. An APTA study, "Effects of Fare Changes on Bus Ridership" (May 1991), found that on the average, a 10% increase in bus fares would result in a 4% decrease in ridership (elasticity = -0.40). This shows that today's transit users react more strongly to fare changes than previously believed.

The study also found that bus riders in small cities are more responsive to fare increases than those in large cities, and peak-hour commuters are much less responsive to fare changes than other passengers.

9. TRANSIT VS. AUTOMOBILE COSTS

For many persons, transit is much more economical than driving to work alone, especially those commuting to central business districts, as illustrated by the following examples for a ten-mile trip*:

	Daily Cost (Dollars)
<u>Walking to transit stop and taking transit</u>	
Fares	\$ 2.00

*Examples are based on American Automobile Association 1990 gasoline and oil cost estimates of \$0.054/mile and maintenance and tire costs of \$0.03/mile. APTA estimates central business district parking costs to be \$5.00/day and the average transit commuting fare to be \$2.00 per day. (Purchase of a monthly pass could reduce the \$2.00 by 10% to 30% or more.) In many large cities, bridge, tunnel, and/or highway tolls could add \$2.00 to \$6.00 per day.

These amounts do not include the fixed cost to own an intermediate-size automobile that AAA estimates at \$3,256 per year or \$8.92 per day. This includes insurance, license and registration, depreciation, and finance charges.

Also excluded from the costs listed above are costs to build, maintain, and operate highways, parking facilities, and transit systems. These costs are mostly paid by all citizens through taxes and are not directly related to use of an automobile or transit.

Driving alone

Gasoline & oil	\$ 1.08
Maintenance & tires	0.60
<u>Parking</u>	<u>5.00</u>
Total	6.68

Driving 3 miles to a park-and-ride lot and using transit for the remainder of the trip

Fares	\$ 2.00
Gasoline & oil	0.32
<u>Maintenance & tires</u>	<u>0.18</u>
Total	2.50

10. EXPENSES

Operating expense in 1992 was about \$16.6 billion. Motorbus accounted for \$9.9 billion, heavy rail for \$3.3 billion, light rail for \$0.3 billion, commuter rail for \$2.0 billion, trolleybus for \$0.1 billion, demand response for \$0.7 billion and the remaining modes for \$0.2 billion.

The largest types of expenses were salaries and wages (47%), fringe benefits (26%), purchased transportation (9%), and fuel and supplies (9%). Services, utilities, insurance, and other costs made up the remaining 9%.

About 45% of expenses are devoted to scheduling and operation of revenue vehicles, 19% to their maintenance, 10% to facilities maintenance, 9% to purchased transportation, and 17% to administration.

Capital expenses are monies paid for transit infrastructure (facilities, vehicles, and major equipment). In 1992, 36% of federal funds went for bus facilities, vehicles, and equipment, 44% for modernization of existing rail systems, and 19% for new rail systems.

TABLE 1

Source of Transit Operating Revenues, 1980 and 1992

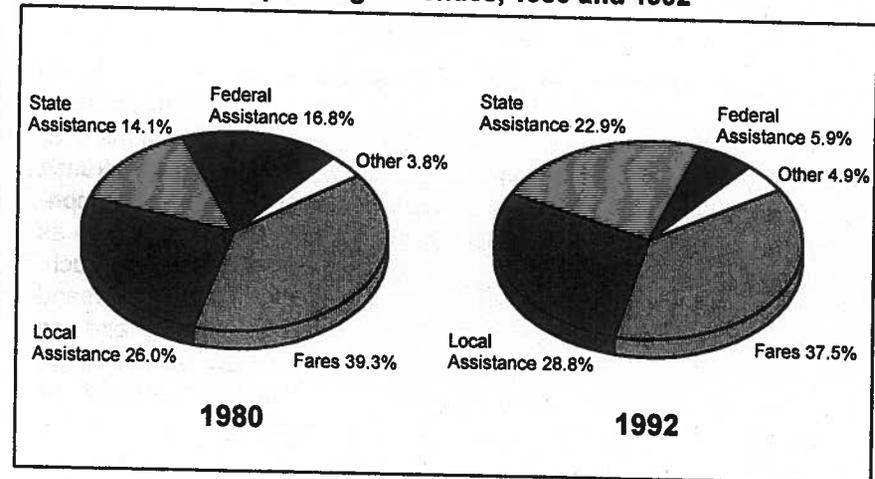

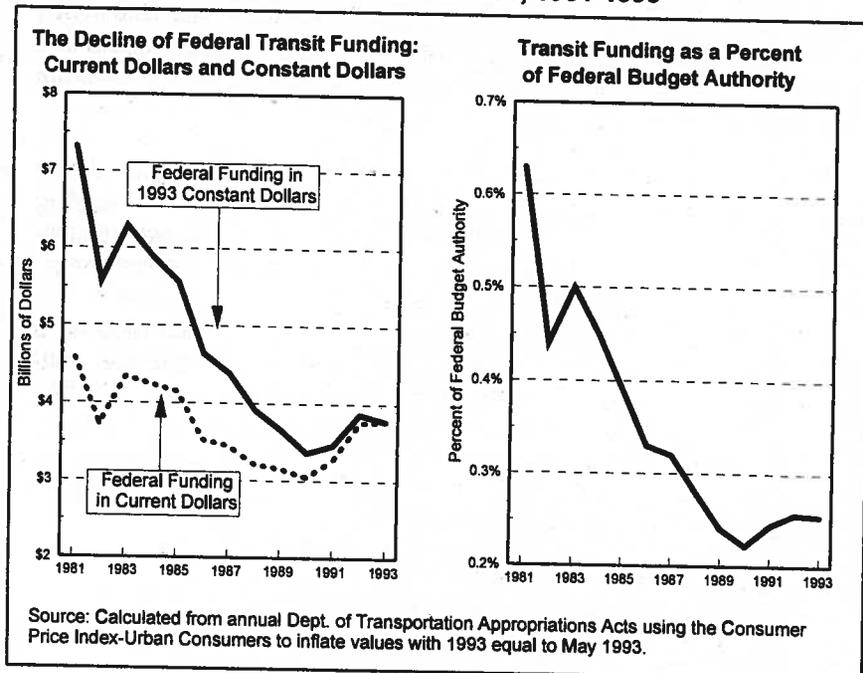

TABLE 2

Real Value of Federal Transit Assistance, 1981-1993

11. GOVERNMENTAL FINANCIAL ASSISTANCE

Transit, like all public services and many private segments of the U.S. economy, receives governmental financial assistance. While transit assistance is explicitly identified in government budgets and appropriations, governmental assistance to many other segments, such as automobile owners, is largely indirect and not identified as such. Examples are the large tax write-offs that may total several thousand dollars a year for employer-provided or paid free parking and the hidden costs of highways (parking lots and garages, maintenance, police, insurance, licensing, etc.) that are paid by virtually all taxpayers rather than just the users of the highways.

Part of the governmental assistance to transit is required to cover a government-induced gap between expenses and revenues. Numerous federal regulations and court decisions require the provision of services for the aged and disabled. Most of these are operated as expensive demand response service and wheelchair-accessible buses and rail vehicles. Regardless of these requirements, the regulations require reduced fares for the aged and disabled during off-peak periods.

Additional regulations regarding low-polluting bus engines, safety features, etc. also lead to more expensive vehicles and operating practices. Large transit systems also require extensive security forces because of the huge numbers of people that patronize them.

Another reason for public assistance is that transit is considered a necessary public service. Transit systems must operate non-profitable routes, sometimes even during late-night hours.

12. BENEFITS OF TRANSIT

Transit use has many benefits to society:

1. *Reduced energy consumption*

Public transit's energy efficiency and conservation potential are considerable:

Based on U.S. Department of Energy data, APTA estimates fuel efficiency of transit compared to the average commuter auto:

1 bus with 7 passengers equals 1 auto.

1 full bus equals 6 autos.

1 full rail car equals 15 autos.

Annual gasoline savings possible from transit use are:

200 gallons for each person switching from driving alone;

85 million gallons for a 10% increase in transit ridership in the five largest U.S. cities; and,

135 million gallons for a 10% nationwide increase in transit ridership.

In 1989, 21% of this country's energy and 49% of its petroleum consumption was by motor vehicles, according to the U.S. Departments of Energy and Transportation. However, transit vehicles are more efficient than automobiles when passenger miles are considered. The Energy Department estimated the following 1989 energy consumption rates:

	<u>BTU/Passenger Mile</u>
Automobile	4,063
Transit bus	3,711
Transit rail	3,397
Commuter rail	3,102

A BTU (British Thermal Unit) is a measure of energy consumption regardless of whether it is fossil-fuel, nuclear, electric, water power, or some other type. Passenger miles are the number of passengers times the miles they travel.

2. Rational development

One only has to look at the development patterns of a metropolitan area from the air to see the relationship between development and transit. Office buildings, residential complexes or buildings, hospitals, universities, shopping areas, and large manufacturing plants all generate large amounts of traffic. High-capacity vehicle access (i.e., transit) is the only way such areas can avoid gridlock due to the limited capacity of streets, highways, and parking facilities. In the most highly developed areas such as New York City and Chicago, 75% or more of all people arrive on transit: street and parking capacity cannot handle more than a small fraction of the vehicles that would be needed to convey the numbers of people involved.

3. Mobility

The ability to travel freely is one of the hallmarks of a free society. Yet millions of people have restricted mobility because they do not own a motor vehicle, cannot afford to drive, or are physically unable to drive. Transit is the only means of mobility for most of these people--to jobs, medical services, recreation, and shopping.

4. Greater retail sales

Numerous estimates have been made around the country that retail sales--especially in central business districts--are enhanced by the presence of good transit service. There are several reasons:

- a. A high proportion of commuters in large cities use transit to shop near work, before or after work, or during their lunch hours.
- b. The transit-dependent shop in locations they can get to by transit.
- c. Many department stores, urban malls, and commercial areas are located in congested areas adjacent to rail stations, bus terminals, and transit routes.

An APTA study, "National Impacts of Transit Capital and Operating Expenditures on Business Revenues," estimates that a dollar invested

in transit would result in a \$3 to \$3.50 increase in business revenues nationwide.

5. Less traffic congestion

One full 40-foot bus is equivalent to a line of moving automobiles stretching*:

- 6 city blocks (if traffic operates at 25 mph)
- 4.5 blocks (if traffic operates at 15 mph)

One full six-car heavy rail train is equivalent to a line of moving automobiles stretching*:

- 95 city blocks (if traffic operates at 25 mph)
- 68 blocks (if traffic operates at 15 mph)

6. Creation of jobs

In addition to the 282,000 or so people directly employed by transit, hundreds of thousands of others are dependent on transit for their livelihood. These include engineering and construction workers planning and building transit facilities, transit consultants,

*A full 40-foot bus holds about 70 people including standees. At the estimated national average of 1.2 persons per automobile, one bus is equivalent to 58 automobiles.

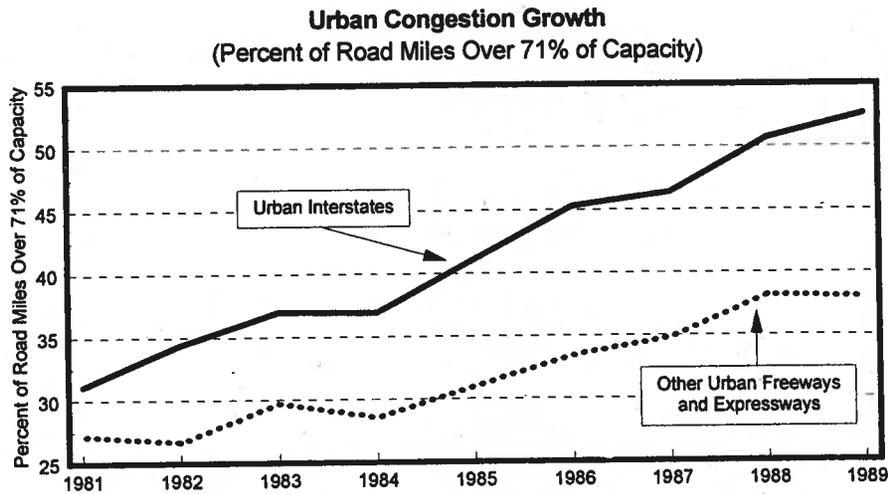

A full heavy rail car accommodates about 180 people including standees; a train of six cars carries 1,080 people, thus replacing 900 automobiles.

There are normally ten city blocks per mile. Average automobile length is estimated at 16 feet, and a one-car-length-per-each-ten-mile-per-hour following length is assumed.

It is estimated that 2,400 direct and 5,800 total jobs are created by each \$100 million transit capital investment. Operating expenditures of \$100 million would generate 3,100 direct and 7,300 total jobs.

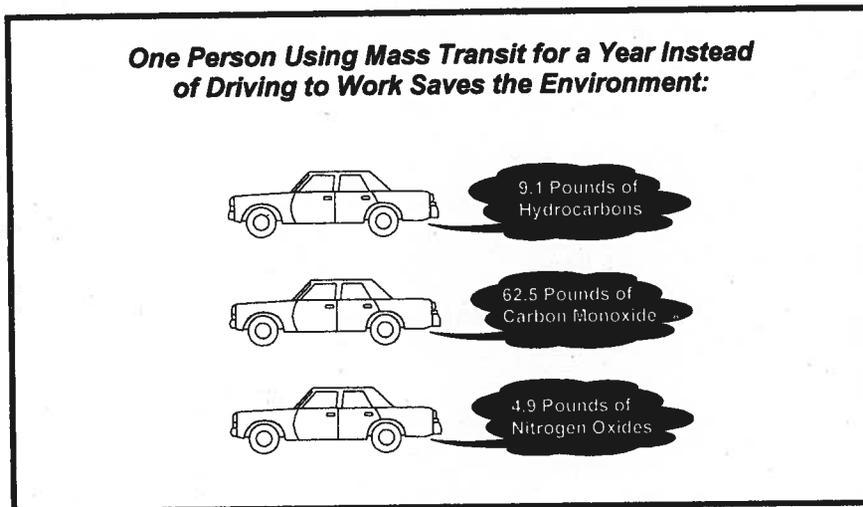

TABLE 3

Congestion and Adverse Environmental Impact of Automobiles

Source: APTA, *Issue Paper*, June 1991 (from FHWA data).

TABLE 4

Source: APTA, *Mass Transit - The Clean Air Alternative*, 1991.

manufacturers of transit vehicles, equipment and parts, retail employees serving transit passengers, and employees in all sectors of the U.S. economy indirectly supporting transit activities.

7. Mobility during crises

During snow and ice storms, transit patronage often rises as numerous people avoid driving under such conditions.

After the 1989 San Francisco earthquake the entire city was paralyzed, but the BART rail system resumed operations after just a few hours to check for damage. Service was expanded to 24-hours-per-day since the bridge connecting San Francisco and Oakland was closed for several weeks.

8. Less air pollution

Transit vehicles contribute far less pollution to the atmosphere than automobiles. The following is derived from U.S. Department of Energy data.

Pollution by Mode of Travel

For typical work trips based on national average vehicle occupancy rates, pollutant emissions in grams per passenger mile are:

Mode	Hydrocarbons	Carbon Monoxide	Nitrogen Oxides
Electric Rail	0.01	0.02	0.47
Motorbus	0.20	3.05	1.54
Vanpool	0.36	2.42	0.38
Carpool	0.70	5.02	0.69
Single-person Auto	2.09	15.06	2.06

Reduction in pollution when riding transit instead of driving

Mode	Hydrocarbons	Carbon Monoxide	Nitrogen Oxides
Electric Rail	99%	99%	60%
Motorbus	90%	75%	10-15%
Vanpool	80%	80%	80%

9. Safety

Transit is one of the safest methods of passenger travel, according to the National Safety Council. The 1989-1991 average death rates in terms of 100 million passenger miles are as follows:

	Death Rate
Automobiles	1.05
Intercity & commuter railroads	0.05
Airlines	0.02
Intercity buses	0.01
School buses	0.02
Transit buses	0.01
Heavy & light rail vehicles	Not reported

10. Increased Productivity

Investment in transit is estimated to improve worker output of about \$520 billion over the next 10 years, assuming an investment of \$100 billion. The better facilities and services provided by the investment result in more efficient movement of people and goods which saves time, reduces costs and increases productivity. This finding is from "Transportation Spending and Economic Growth," a 1991 study by Professor David A. Aschauer.

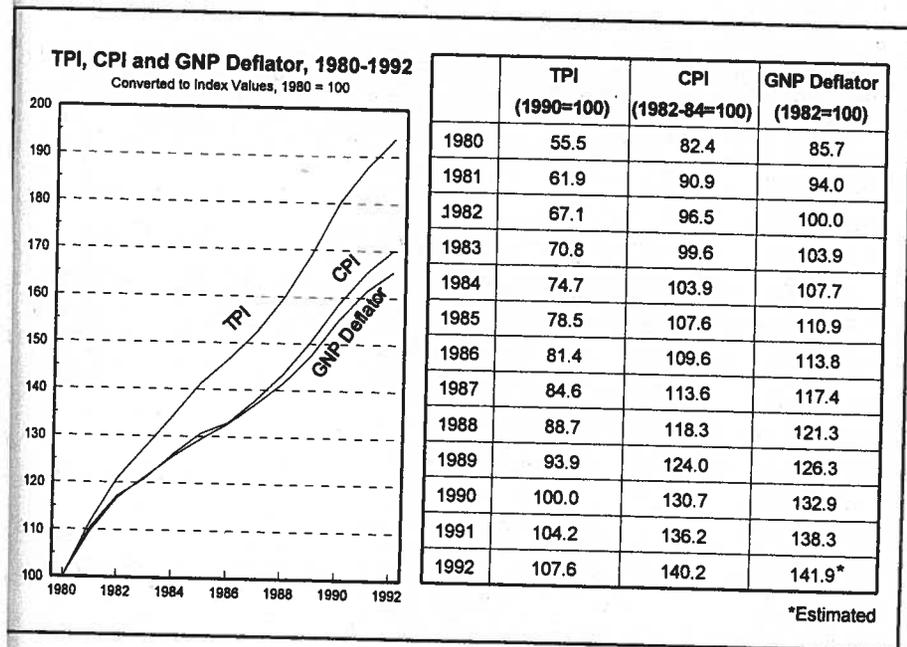

13. TRANSIT PRICE INDEX

Traditionally, analysts use the Consumer Price Index (CPI) or the GNP Deflator to adjust for monetary inflation when estimating changes in the *real* cost of providing transit services. Using these

very general inflation measures is misleading, since transit systems do not buy the same items that consumers or national businesses do. The Transit Price Index (TPI) has been created to properly account for the changing costs of items purchased by the transit industry, which typically include construction materials, industrial supplies, labor services, insurance, and other services.

From 1980 to 1992, transit inflation, measured by the TPI, increased 93.9 percent, compared to 70.3 percent for the CPI and 65.6 percent for the GNP Deflator. The costs of transit items grew 34 percent faster than the costs of consumer goods during this period.

TABLE 5

14. TRANSIT PRODUCTIVITY AND EFFICIENCY

There are several means to gauge transit productivity and efficiency. The most common indicators of productivity include various measures of output per worker, and the most common measures of efficiency include the real operating expense per unit of transit service. Using the TPI to adjust for transit inflation, these measures indicate that in the latest five-year period for which final data are available, both transit productivity and efficiency have improved significantly.

Change in Transit Productivity and Operational Efficiency, 1985-90

	<u>1985</u>	<u>1990</u>	<u>'85-90*</u>
Productivity:			
Vehicle Miles/Employee	10,355	11,881	14.9%
Vehicle Hours/Employee	730	834	14.2%
Passenger Trips/Employee	31,983	32,250	0.8%
Passenger Miles/Employee	146,585	150,691	2.8%
Efficiency:			
Real Operating Expense/Vehicle Hour	\$79.99	\$69.20	-13.5%
Real Operating Expense/Vehicle Mile	5.65	4.86	-14.0%
Real Operating Expense/Passenger Trip	1.83	1.79	-2.2%
Real Operating Expense/Passenger Mile	0.40	0.38	-5.0%

Note: Real Operating Expense values are computed using the TPI.

* Positive growth in transit output per employee indicates improved productivity. Negative growth in expense per unit of output indicates improved efficiency.

SECTION II

Profile of U.S. Transit

TABLE 6

Transit Modal Statistics at a Glance

MODE	NUMBER OF SYSTEMS(a)		ACTIVE VEHICLES		OPERATING EMPLOYEES	
	1992	1991	1992	1991	1992	1991
Motor Bus	2,691	2,689	61,959	60,377	162,509	163,555
Urbanized Area Fixed-Route	1,174	1,172	55,102	53,642	148,665	149,247
Other Fixed-Route	1,517	1,517	6,857	6,735	13,844	14,308

Total	5,086	5,084	100,274	96,399	266,492	265,857

All data are preliminary.

(a) Total is not sum of all modes since many systems operate more than one mode.

(b) Excludes international, rural, rural interstate, island, and urban park ferries.

26

TABLE 6 (continued)

Transit Modal Statistics at a Glance

MODE	VEHICLE MILES OPERATED (MILLIONS)		UNLINKED PASSENGER TRIPS (MILLIONS)		PASSENGER MILES (MILLIONS)	
	1992	1991	1992	1991	1992	1991
Motor Bus	2,185.0	2,166.6	5,525	5,624	20,404	21,090
Urbanized Area Fixed-Route	2,007.2	1,994.2	5,263	5,356	19,533	20,219
Other Fixed-Route	177.8	172.4	262	268	871	871
Demand Response	381.6	335.0	79	71	511	454
Heavy Rail	525.4	527.2	2,207	2,172	10,737	10,528
Light Rail	28.7	27.6	189	184	704	662
Trolleybus	14.0	13.6	127	125	197	195
Commuter Rail	218.7	214.9	314	318	7,342	7,344
Ferry Boat (b)	2.3	2.4	47	50	271	282
Other (a)	28.3	19.1	31	31	219	148
Total	3,384.0	3,306.4	8,519	8,575	40,385	40,703
Total Motor Bus Mile Equivalents (c)	4,201.8	4,159.1				

All data are preliminary.

(a) Includes cable car, inclined plane, aerial tramway, vanpool, and automated guideway.

(b) Excludes international, rural, rural interstate, island, and urban park ferries.

(c) Estimate based on average seating plus standing capacity of vehicle compared to that of a motor bus (70 passengers):
light rail = 1.7, heavy rail = 2.6, commuter rail = 2.2, trolleybus = 1.0, demand response = 0.2, other = 1.0.

27

TABLE 6 (continued)

Transit Modal Statistics at a Glance

MODE	PASSENGER REVENUE (MILLIONS)		OPERATING EXPENSE (MILLIONS)		ENERGY CONSUMPTION	
					GALLONS (MILLIONS)	KWH (MILLIONS)
	1992	1991	1992	1991	1992	1992
Motor Bus	\$3,074.4	\$3,098.4	\$9,945.2	\$9,501.4	578.7	0.1
Urbanized Area Fixed-Route	3,027.0	3,039.1	9,288.8	8,875.9	541.3	0.1
Other Fixed-Route	47.4	59.3	656.4	625.5	37.4	0.0

Wisconsin	18	32	71	121
Wyoming	1	21	20	42
United States Total	786	1,077	3,223	5,086

(a) Transit systems reporting data for U.S. Federal Transit Administration Annual Section 15 Report and other known public and private transit systems. Systems operating in two or more states are counted in the state in which they operate the largest portion of their service.

(b) Transit systems receiving funds under the provisions of the Federal Transit Act, Section 18. Includes service providers operating fixed-route only, demand-response only, and combined fixed-route and demand-response service. Excludes providers also providing urbanized area service.

(c) Transit service providers receiving funds under the provisions of the Federal Transit Act, Section 16(b)2. Excludes service providers also providing urbanized area or small urban and rural service.

Data estimate for Small Urban and Rural Transit Systems and Non-Profit Elderly and Disabled Service Providers based on *A Directory of UMTA-Funded Rural and Specialized Transit Systems*, U.S. Department of Transportation, December 1989.

TABLE 8

Transit Systems Classified by Vehicle Type and Population Group

POPULATION OF URBANIZED AREA	ALL-RAIL SYSTEMS	MULTI-MODE SYSTEMS	MOTOR BUS/ DEMAND RESPONSE/ VANPOOL SYSTEMS	ALL-FERRY SYSTEMS	TOTAL SYSTEMS(b)
2,000,000 and greater	14	20	622	10	666
500,000 to 2,000,000	3	14	540	7	564
250,000 to 500,000	0	1	234	1	236
100,000 to 250,000	0	1	332	1	334
50,000 to 100,000	1	2	321	1	325
Less than 50,000(a)	1	0	2,959	1	2,961
Total U.S. Transit Systems	19	38	5,008	21	5,086

(a) Rural areas and urban places with less than 50,000 population outside of urbanized areas.

(b) As of July 1, 1992. Excludes bus service operated by Intercity Bus Carriers.

32

TABLE 9

Public Transit as a Portion of All Transit*

CALENDAR YEAR	NUMBER OF TRANSIT SYSTEMS	PERCENT OF ALL TRANSIT	TOTAL TRANSIT VEHICLES OWNED AND LEASED	PERCENT OF ALL TRANSIT	VEHICLE MILES OPERATED (MILLIONS)	PERCENT OF ALL TRANSIT	UNLINKED PASSENGER TRIPS (MILLIONS)	PERCENT OF ALL TRANSIT
1945	29	2%	14,609	16%	--	--	--	--
1950	36	3	24,570	28	--	--	--	--

1990	1,580	31	86,430	86	3,057	94	8,493	94

P = Preliminary

-- Data not available

*Public transit systems include all transit systems owned or subsidized by municipalities, counties, regional authorities, states, or other governmental agencies and transit systems operated or managed by private firms under contract to governmental agency owners. Series not continuous between 1980 and 1985. Data prior to 1985 exclude commuter railroads, urban ferry boats, demand response, and some transit systems in non-urbanized areas.

35

TABLE 11

Milestones in U.S. Transit History

Year	Event
1630	Boston--reputed first publicly operated ferry boat
1740	New York--reputed first use of ox carts for carrying of passengers
1811	New York--first mechanically operated (steam-powered) ferry boat
1827	New York--first horse-drawn urban stagecoach line (Dry Dock & East Broadway)
1830	Baltimore--first railroad (Baltimore & Ohio Railroad Co.)
1832	New York--first horse-drawn street railway line (New York & Harlem Railroad Co.)
1835	New Orleans--oldest street railway line still operating (New Orleans & Carrollton line)
1838	Boston--first commuter fares on a railroad (Boston & West Worcester Railroad)
1850	New York--first use of exterior advertising on street railways
1856	Boston--first fare-free promotion
1861	New York--first failed attempt to form street railway labor organization
1868	New York--first cable-powered (& first elevated) line (West Side & Yonkers Patent Railway)
1870	New York--first pneumatic-powered (& first underground) line (Beach Pneumatic Railroad Co.)
1870	Pittsburgh--first inclined plane
1871	New York--first steam-powered elevated line (New York Elevated Railroad Co.)
1872	Great Epizootic horse influenza epidemic in eastern states kills thousands of horses (the motive power for most street railways)
1873	San Francisco--first successful cable-powered line (Clay St. Hill Railroad)
1882	Boston--American Street Railway Association (APTA's original predecessor) formed
1883	New York--first surviving street railway labor organization (Knights of Labor Local 2878)
1884	Cleveland--first electric street railway line (East Cleveland Street Railway)
1884	first transit-only publication (The Street Railway Journal)
1885	New York--first recorded strike by street railway workers (Third Avenue & Sixth Avenue Elevates)
1886	Montgomery, AL--first semi-successful citywide street railway system (Capital City Street Railway Co.)
1888	Richmond, VA--first successful electric street railway line (Union Passenger Railway)
1889	New York--first major strike by street railway workers

36

TABLE 11 (continued)

Milestones in U.S. Transit History

Year	Event
1892	Indianapolis--first national street railway labor union founded (Amalgamated Association of Street Railway Employees of America, now called the Amalgamated Transit Union)
1893	Portland, OR--first interurban rail line (East Side Railway Co.)
1894	Boston--first public transit commission (Boston Transit Commission)
1895	Chicago--first electric elevated rail line (Metropolitan West Side Elevated Railway)
1897	Boston--first electric underground (& first publicly-financed) street railway line (West End Street Railway)
1898	Chicago--first electric multiple-unit controlled rail line (Chicago & South Side Rapid Transit Railroad Co.)
1904	New York--first electric underground (& first 4-track express) heavy rail line (Interborough Rapid Transit Co.)
1905	New York--first public takeover of a private transit company (Staten Island Ferry)
1905	New York--first motor bus line (Fifth Avenue Coach Co.)
1906	Monroe, LA--first public takeover of a street railway
1908	New York--first interstate underground heavy rail line (Hudson & Manhattan Railroad to New Jersey)
1910	Hollywood, CA--first trolleybus line (Laurel Canyon Utilities Co.)
1912	San Francisco--first publicly operated street railway in a large city (San Francisco Municipal Railway)
1912	Cleveland--first street railway to operate motor buses (Cleveland Railway)
1914	Los Angeles--first jitney
1917	New York--last horse-drawn street railway line closed
1918	New York--APTA's predecessor organization first calls for public takeover of transit
1920	first motor bus not based on truck chassis (Fageol Safety Coach)
1921	New York--first successful trolleybus line
1923	Bay City, MI, Everett, WA, Newburgh, NY--first cities to replace all streetcars with motor buses
1926	highest peacetime transit ridership before World War II (17.2 billion)
1927	Detroit--first motor bus without cow-type engine
1927	Philadelphia--first automobile park and ride lot and first bus-rail transfer facility for a non-commuterrail line
1932	New York--first publicly operated heavy rail line (Independent Subway)

37

TABLE 11 (continued)

Milestones in U.S. Transit History

Year	Event
1933	San Antonio--first large city to replace all streetcars with motor buses
1934	New York--Transport Workers Union of America founded
1935	Washington--Public Utility Holding Company Act of 1935 enacted requiring most power companies to divest themselves of transit operations and eliminating much private transit financing
1936	motor bus manufacturers began to assume control of or influence street railways, leading to rapid replacement of streetcars with motor buses
1936	New York--first industry-developed standardized street railway car (P.C.C. car) (Brooklyn & Queens Transit System)
1938	Chicago--first use of federal capital funding to build a transit rail line
1939	Chicago--first street with designated bus lane
1940	first time motor bus ridership exceeded street railway ridership
1940	San Francisco becomes last surviving cable car system
1945	Los Angeles--first rail line in expressway median (Pacific Electric Railway)
1946	highest-ever transit ridership (23.4 billion)
1952	San Francisco--last new PCC car for U.S. transit system placed in service
1961	Washington--first significant federal transit legislation (Housing & Urban Development Act of 1961)
1962	Seattle--first monorail (Seattle World's Fair)
1962	New York--first automated heavy rail line (Grand Central Shuttle)
1963	Chicago becomes last surviving city with interurban line (Chicago, South Shore, & South Bend Railroad)
1964	Washington--creation of Urban Mass Transportation Administration (Urban Mass Transportation Act of 1964)
1966	New York--first public takeover of commuter railroad (Long Island Rail Road Co.)
1966	Providence--first statewide transit system (Rhode Island Public Transit Authority)
1966	Washington--Urban Mass Transportation Administration moved to new Department of Transportation
1968	Minneapolis--first downtown transit mall (Nicollet Mall)
1968	Cleveland--first rail station at an airport opened
1969	Washington--first transitway (Shirley Highway)

TABLE 11 (continued)

Milestones in U.S. Transit History

Year	Event
1969	Philadelphia--first modern heavy rail system replacing former rail line (Port Authority Transit Corporation)
1970	Fort Walton Beach, FL--first dial-a-ride demand response bus
1971	Washington--first federally subsidized intercity railroad providing commuter service (AMTRAK)
1972	San Francisco--first computer-controlled heavy rail system (Bay Area Rapid Transit District)
1972	transit ridership hits all-time low (5.3 billion)
1973	Washington--some transit service required to be accessible to disabled (Rehabilitation Act of 1973)
1973	Boston, Dayton, OH, Philadelphia, San Francisco, & Seattle become last surviving trolleybus systems
1974	Boston, Cleveland, Newark, New Orleans, Philadelphia, Pittsburgh, & San Francisco become the last surviving street railway systems
1974	Washington--first federal transit operating assistance legislation (National Mass Transportation Assistance Act of 1974)
1974	American Public Transit Association formed from merger of 2 organizations
1975	Morgantown, WV--first automated guideway peplemover (West Virginia University)
1977	San Diego--first wheelchair-lift-equipped fixed-route bus
1979	Seattle--first successful wheelchair-lift-equipped fixed-route bus service
1979	Washington--first standardized transit data accounting system (Section 15)
1980	San Diego--first completely new light rail system (San Diego Trolley)
1982	Washington--transit trust fund for capital projects created thru dedication of one cent of federal gas tax
1990	Washington--virtually all transit service required to be accessible to disabled (Americans with Disabilities Act of 1990)
1991	Washington--transit buses subject to strict pollution controls (Clean Air Act of 1990)
1991	Washington--federal government allowed to subsidize its employees' commuting costs
1991	Washington--first general authorization of use of highway funds for transit (Intermodal Surface Transp. Efficiency Act of 1991)
1992	Washington--first limitation on amount of tax-free employer-paid automobile parking benefits and tripling of value of tax-free benefit for transit use (National Energy Policy Strategy Act)

TABLE 12

Public Cost of Highway Transportation in 1989, Billions of Dollars (a)

Costs recovered from drivers through taxes and tolls	
Highway construction and repair	\$20.0
Highway maintenance	11.8
Highway services, administration, interest, and debt retirement	12.5
Total	<u>44.3</u>
Market costs not recovered from drivers	
Highway construction and repair	13.3
Highway maintenance	7.9
Highway services	68.0
Free parking	85.0
Total	<u>174.2</u>
External costs not recovered from drivers	
Health costs from air pollution	10.0
Reductions of motor vehicle CO2 emissions	27.0
Strategic petroleum reserve	0.3
Military expenditures	25.0
Accidents	55.0
Noise	9.0
Total	<u>126.3</u>
Total Public Cost	344.8
Miles traveled	2,000.0
Public Cost per mile traveled	17¢
Covered by user fees	2¢
Not covered by user fees	15¢

(a) Public costs do not include costs paid directly by motor vehicle owners such as vehicle purchase price, gasoline, parking, insurance, maintenance, and registration. These costs totaled an estimated \$500 billion for passenger and \$254 billion for freight transportation in 1989, according to the ENO Foundation for Transportation, *Transportation in America*.

Source: *The Going Rate: What It Really Costs to Drive*, World Resources Institute, 1992.

SECTION III

Finance

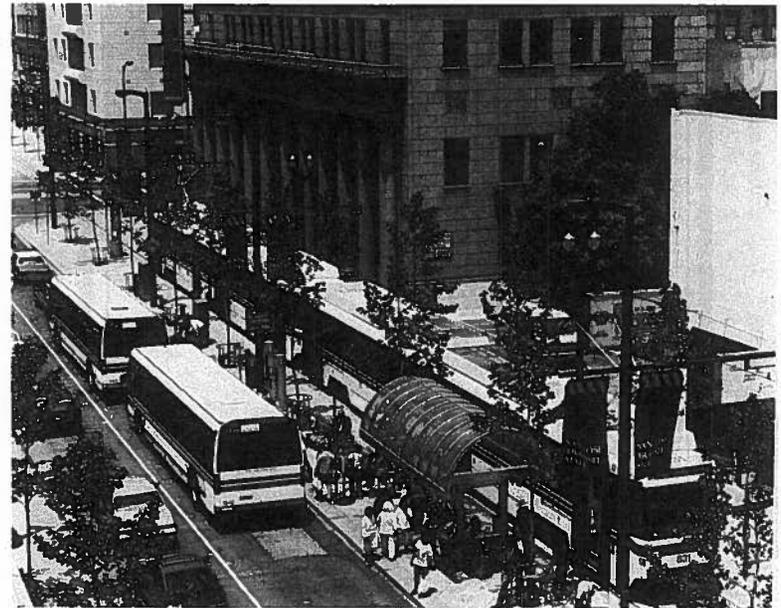

TABLE 13

Transit Financial Statement for 1991 and 1992

	REVENUES	
	1991	1992
Passenger Revenue	\$ 6,037,200,000	\$ 6,179,300,000
Other Operating Revenue	<u>766,800,000</u>	<u>806,300,000</u>
Total Operating Revenue	<u>\$ 6,804,000,000</u>	<u>\$ 6,985,600,000</u>
Local Operating Assistance	\$ 5,573,400,000	\$ 4,747,800,000
State Operating Assistance	3,199,500,000	3,775,600,000
Federal Operating Assistance	<u>955,900,000</u>	<u>964,300,000</u>
Total Operating Assistance	<u>\$ 9,728,800,000</u>	<u>\$ 9,487,700,000</u>
Total Revenue	<u>\$16,532,800,000</u>	<u>\$16,473,300,000</u>

All data are preliminary.

42

TABLE 13 (continued)

Transit Financial Statement for 1991 and 1992

	EXPENSES	
	1991	1992
Vehicle Operations Expense	\$ 6,726,600,000	\$ 7,547,200,000
Vehicle Maintenance Expense	2,992,400,000	3,096,300,000
Non-Vehicle Maintenance Expense	1,604,700,000	1,761,100,000
General Administration Expense	3,584,500,000	2,767,200,000
Purchased Transportation Expense	<u>1,633,200,000</u>	<u>1,473,900,000</u>
Total Operating Expense	<u>\$16,541,400,000</u>	<u>\$16,645,700,000</u>
Depreciation and Amortization	\$ 1,763,300,000	\$ 2,017,500,000
Other Reconciling Items	<u>1,027,200,000</u>	<u>1,208,500,000</u>
Total Reconciling Items	<u>\$ 2,790,500,000</u>	<u>\$ 3,226,000,000</u>
Total Expense	<u>\$19,331,900,000</u>	<u>\$19,871,700,000</u>

All data are preliminary.

NOTE: The difference between Total Revenue and Total Expense is due to several factors including (1) use of the accrual system of accounting rather than the cash system of accounting, (2) amalgamation of accounts of transit systems recording revenue and expense is a variety of fiscal or calendar years, (3) inclusion of State and Local Financial Assistance classified as operating assistance for income accounting purposes but subsequently

transferred to capital accounts for expenditure, (4) inclusion of Depreciation and Amortization costs in Total Expense that are met from revenue sources not included in Total Revenue, (5) exclusion of extraordinary revenues and extraordinary expenses, (6) actual profit or loss of privately owned transit systems, and (7) actual surplus or deficit of publicly owned transit systems.

	P 1992	76	55.1	16.6	1.8	15.6	10.9

NOTE: Excludes automated guideway and commuter railroad data and transit systems operating only heavy rail or light rail.

(a) Number of transit systems reporting data for category and year. Percentages are for the sample only; not expanded to include all transit systems. A part of the variation in percentage values from year to year may result from changes in which transit systems comprise the sample groups rather than from actual changes in values for all transit systems.

(b) Systems directly operating two or more of the following modes: motor bus, heavy rail, light rail, trolleybus, urban ferry boat, or inclined plane.

(c) Beginning 1992, data not comparable to prior years due to change in accounting procedures at New York City Transit Authority.

P = Preliminary

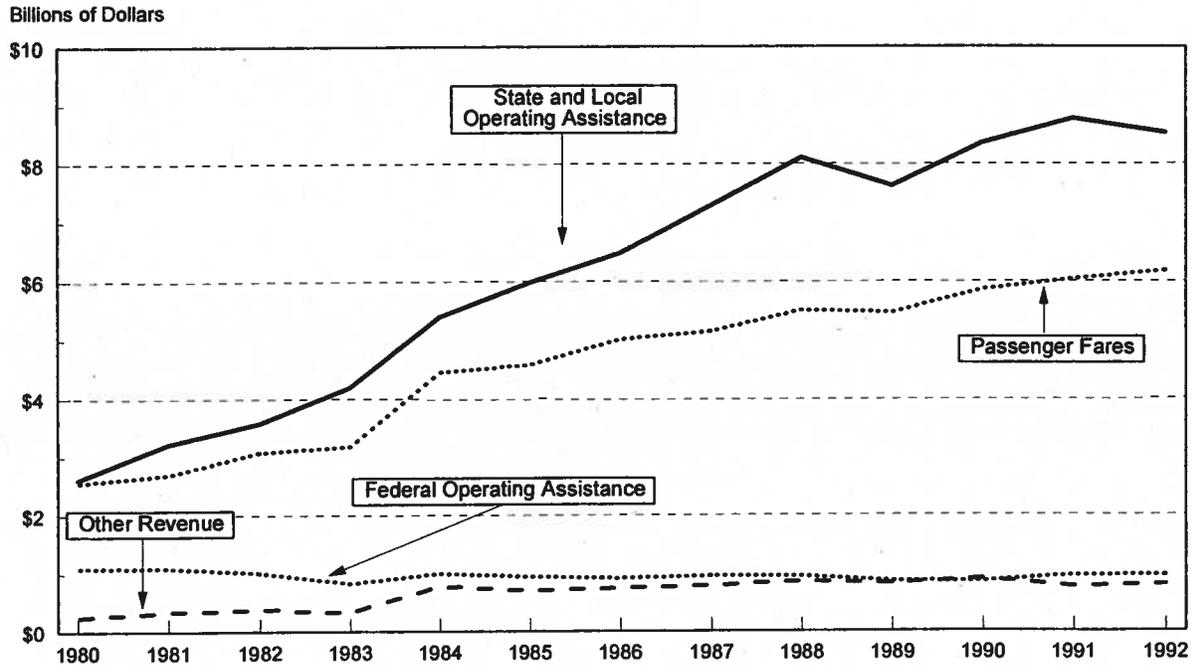

*Excludes commuter railroad, automated guideway, urban ferry boat, demand response and most rural and smaller systems prior to 1984. Series not continuous between 1983 and 1984.

(a) Beginning 1984 includes fare revenue retained by contractors; beginning 1991 includes fare subsidies formerly included in "Other".
(b) Local operating assistance includes taxes levied directly by transit system and other subsidies from local government such as bridge and tunnel tolls and non-transit parking lot revenue.

(c) Beginning 1992, local operating assistance declined by about \$500 million due to change in accounting procedures at New York City Transit Authority.

TABLE 16

P = Preliminary

-- Data not available

(a) Includes transfer charges and zone charges; includes reduced-fare trips, free-fare trips, and free-transfer trips.

(b) Unweighted average of adult cash fares, fixed-route service; excludes transfer, premium, or zone charges; each transit system counted equally. Beginning in 1984, calculation based on basic Adult Cash Fare only.

(c) Percents represent a 300-transit-system sample, not estimated for all transit systems.

(d) Excludes commuter railroad, automated guideway, urban ferry boat, demand response, and most rural and smaller systems prior to 1984. Series not continuous between 1983 and 1984.

(c) Beginning in 1990 transit systems assigned by population of urbanized area based on 1990 United States Census of Population.

TABLE 33

Major Trends of Transit Ridership

Transit ridership has gone through six major cycles of growth and decline during the Twentieth Century influenced by social and economic forces external to transit. From 1900 to 1929 transit ridership grew steadily; first due to technical innovation and investment opportunities during the early development of street railways and then due to the economic boom of World War I and the post-war period. The Great Depression caused a steep decline in ridership between 1929 and 1939 as people made fewer work trips and often could not afford to take pleasure trips. A new federal law limiting utilities' ability to subsidize transit, as had been normal practice, led to a decline in transit capital facilities. World War II caused motor fuel rationing and an economic boom that led to a new rapid growth cycle in transit ridership. Ridership quickly declined from artificially high war levels as people fled to suburbs spurred on by cheap fuel and government policy favoring low-density suburban growth. In 1973 the ridership cycle reversed again and transit began a modest growth based on a partnership of local, state, and federal government committed to improving America's transportation infrastructure.

*As of December 31.

-- Data not available

P = Preliminary

87

(a) Wheelchair accessibility for high-platform-boarding railcars is provided by station modifications; beginning in 1992 data reported includes lift and ramp-equipped railcars and high-platform accessibility.

TABLE 45

Motor Buses by Manufacturer (a)

MANUFACTURER	NUMBER OWNED AND LEASED	PERCENT
General Motors Truck & Coach Division (after 1987: Truck only)	13,900	26.9%
Flxible (includes Grumman Flxible)	12,080	23.4
Neoplan USA Corporation	4,118	8.0
Transportation Manufacturing Corporation	4,016	7.8
Gillig Corporation	3,634	7.0
Bus Industries of America (Ontario Bus Industries)	2,677	5.2
Motor Coach Industries	2,279	4.4
M.A.N. Truck and Bus Corporation	2,185	4.2
New Flyer Industries and New Flyer of America (Flyer)	2,012	3.9
Diesel Division, General Motors of Canada	1,096	2.1
AM General Corporation	557	1.1
America Ikarus (Ikarus USA)	356	.7
Eagle Coach Corporation	318	.6
Blue Bird Corporation	310	.6
Chance Coach	255	.5
Crown Coach Corporation	238	.5
Volvo of America Corporation	227	.4
Saab-Scania	223	.4

TABLE 45 (continued)

Motor Buses by Manufacturer (a)

MANUFACTURER	NUMBER OWNED AND LEASED	PERCENT
Stewart & Stevenson Services	157	.3
National Coach Corporation	121	.2
Thomas Built Buses	90	.2
Boyertown Auto Body Works	76	.1
New Goshen Coach Corporation (Goshen)	66	.1
Champion Motor Coach	62	.1
Transportation Vehicles	56	.1
Collins Bus Corporation	52	.1
Carpenter Manufacturing	50	.1
ELDorado Bus Corporation (El Dorado Motor Corporation)	48	.1
MCR Technology & Walter Vetter Gmbh & Company	41	.1
Skillcraft Industries	39	.1
Supreme Corporation	34	.1
Others	252	.5
Total	51,625	100.0

(a) Data as of January 1, 1993 from APTA survey of 300 major transit systems. Understates shares of small vehicle manufacturers since most smaller transit systems not reporting data to survey only purchase small vehicles.

TABLE 46

Motor Buses by Year Built (a)

YEAR BUILT	NUMBER		PERCENT	
	OWNED AND LEASED	IN ACTIVE SERVICE	OWNED AND LEASED	IN ACTIVE SERVICE
1993 (model year built in 1992)	20	19	NA	NA
1992	2,130	2,058	4.1	4.2
1991	3,059	3,042	5.9	6.2
1990	3,856	3,829	7.5	7.8
1989	3,714	3,698	7.2	7.5
1988	2,867	2,862	5.6	5.8
1987	2,859	2,848	5.5	5.8
1986	3,032	3,021	5.9	6.1
1985	3,428	3,381	6.6	6.9
1984	2,937	2,878	5.7	5.9
1983	4,107	4,013	8.0	8.2
1982	2,868	2,739	5.6	5.6
1981	3,991	3,864	7.7	7.9
1977-1980	7,943	6,919	15.4	14.1
1976 and earlier	4,814	3,975	9.3	8.1
Total	51,625	49,146	100.0%	100.0%
Average Age in Years**	8.7	8.4	---	---

**1992 = 0.5 years old; 1991 = 1.5 years old; 1990 = 2.5 years old; etc.

(a) Data as of January 1, 1993 from APTA survey of 300 major transit systems. Understates shares of eight most recent years since most smaller transit systems not reporting data to survey purchase primarily vehicles that last less than eight years.

101

TABLE 56

Energy Efficiency of Transit

- A bus with as few as seven passengers is more fuel efficient than the average auto used for commuting.
- The fuel efficiency of a fully-occupied bus is six times greater than that of the average commuter auto.
- The fuel efficiency of a fully-occupied rail car is 15 times greater than that of the average commuter auto.
- A single person commuting via transit instead of driving alone will save 200 gallons of gasoline in a year.
- A 10 percent increase in transit ridership in the five largest U.S. cities would save 85 million gallons of gasoline a year.
- A 10 percent nationwide increase in transit ridership would save 135 million gallons of gasoline a year.

Every Commuter Who Switches From Driving Alone to Transit Saves 200 Gallons of Gasoline Per Year!

Source: APTA, *Public Transit - The Vehicle For Conserving Energy*, 1991.

TABLE 57

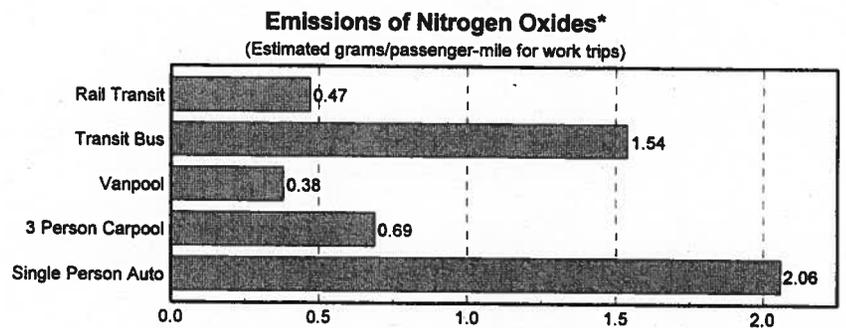

Transportation Energy Use by Mode, 1990

	FUEL CONSUMPTION (TRILLION BTUS)	PERCENT OF TOTAL
Automobiles	9,066.3	39.1
Transit Buses	78.9	0.3
Other Buses	83.9	0.4

TABLE 58

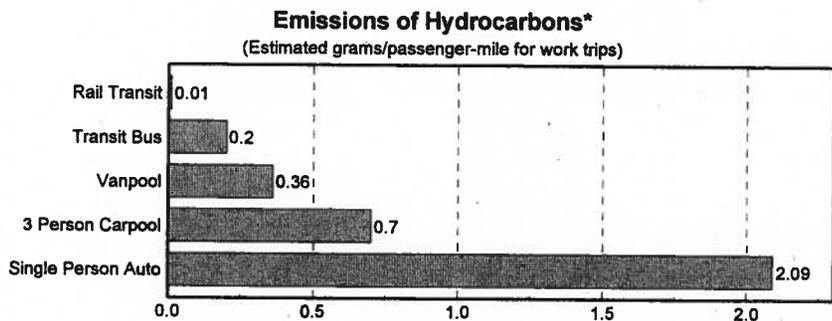

Pollution Reduction Resulting From Transit Use

*Damages lung tissues. Also precursor of ozone which irritates respiratory tract and eyes, decreases the lungs' working ability and causes both cough and chest pain.

*Limits blood's ability to transport oxygen to body tissues. Can cause dizziness, headaches, impaired coordination and death.

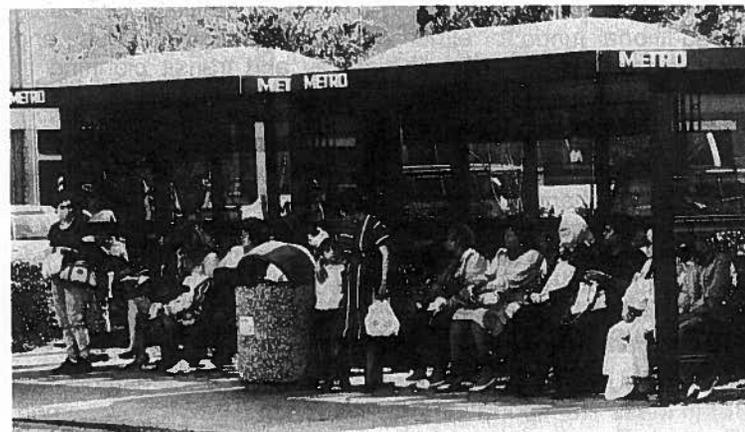

*Precursor of ozone which irritates respiratory tract and eyes, decreases the lungs' working ability and causes both cough and chest pain.

SECTION VIII

The Federal Transit Act

History and Provisions of the Federal Transit Act

In 1964 the United States Congress found that "the welfare and vitality of urban areas, the satisfactory movement of people and goods within such areas, and the effectiveness of housing, urban renewal, highway, and other federally aided programs were being jeopardized by the deterioration or inadequate provision of urban transportation facilities and services. . . ." To remedy this situation, Congress enacted the Federal Transit Act, known as the Urban Mass Transportation Act of 1964 until 1991, which provided a program for transit systems to purchase capital equipment.

Continuing this commitment through its third decade, Congress enacted the Intermodal Surface Transportation Efficiency Act of 1991 (ISTEA). The ISTEA not only authorizes higher levels of funding for transit than any previous law, it also provides for flexible use of additional funds for either highway or transit purposes and requires greater coordination of highway and transit planning to provide for the most efficient surface transportation system to meet local needs.

The federal transit assistance program has evolved over the years due to changing transit needs and changing federal objectives. Landmarks in this evolution include:

- o 1961: The Housing and Urban Development Act of 1961 provided funding for transit demonstrations and loans for mass transportation projects.
- o 1964: The Urban Mass Transportation Act of 1964 established the Urban Mass Transportation Administration (UMTA, now named the Federal Transit Administration) within the Department of Housing and Urban Development to administer a program of capital grants to transit systems.
- o 1966: The Urban Mass Transportation Act of 1966 expanded funding for capital purchases and allowed funding for research, planning, and training.
- o 1966: The Urban Mass Transportation Administration was moved to the newly created Department of Transportation (DOT).
- o 1970: The Urban Mass Transportation Assistance Act of 1970 provided increased levels of federal funding by authorizing a \$3.1 billion program of capital grants.
- o 1973: The Federal-Aid Highway Act of 1973 increased the federally funded portion of transit capital projects from two-thirds to

80% and authorized expenditure of Federal-Aid Urban Systems highway funds and Interstate Highway Transfers for qualifying transit projects.

- o 1974: The National Mass Transportation Assistance Act of 1974 increased authorizations for discretionary capital funding and created a formula grant program to allocate funding directly to urbanized areas that could be used for either operations or capital projects.
- o 1978: The Federal Public Transportation Act of 1978, Title III of the Surface Transportation Assistance Act of 1978 expanded the formula grant program and divided it into categorical programs that included additional operating grants for fixed guideway systems, capital grants for bus purchases, and operating grants for places outside of urbanized areas.
- o 1982: The Federal Public Transportation Act of 1982, Title III of the Surface Transportation Assistance Act of 1982 provided that 1¢ of a 5¢ increase in the Highway Trust Fund tax on motor fuels would be placed into a Mass Transit Account for capital projects, increased the portion of all funding allocated through the formula grant program, and altered the formula grant program allocation formula to include transit service data as well as population data.
- o 1987: The Federal Mass Transportation Act of 1987, Title III of the Surface Transportation and Uniform Relocation Assistance Act of 1987, authorized the federal transit program through Fiscal Year 1991 and provided that a portion of the Mass Transit Account of the Highway Trust Fund would be allocated for capital purposes on a formula basis.
- o 1991: The Federal Transit Act Amendments of 1991, Title III of the Intermodal Surface Transportation Efficiency Act of 1991, extended the authorization of transit assistance through FY 1997 at levels higher than any previous authorizations, changed the name of the transit law to the Federal Transit Act and changed the name of the Urban Mass Transportation Administration to the Federal Transit Administration, and continued a shift in funding distribution to formulas by distributing the rail modernization portion of Section 3 major capital funds by formula for the first time.

Surface Transportation, Title I of the Intermodal Surface Transportation Efficiency Act of 1991, provided that specific funds authorized through Federal-Aid Highways programs are intended for use for either transit or highway projects. Called flexible funds, these monies are to be used for the mode of transportation best suited to meeting the needs of individual areas and states.

Funds for federal transit assistance come from two sources. Money from the General Revenue of the Treasury is appropriated each year by Congress. During the appropriation process Congress will also set a limit on the amount of money from the Mass Transit Account of the Highway Trust Fund that can be used to fund transit projects during the next year.

Transit systems receive their funding through several programs identified by the section of the Federal Transit Act which defines how the program works. These sections allocate funding to urbanized areas or states by formula or through discretionary processes. The largest programs are:

Section 3 Original grant program, begun in FY 1964, provides capital assistance to eligible transit projects in three categories: (1) construction of new fixed-guideway systems or extensions of existing systems called "New Starts," (2) modernization of existing fixed-guideway systems called "Rail Modernization," and (3) major bus related construction projects or equipment acquisition called "Bus Capital."

Status: Authorized through FY 1997.

Recipients of Funds: State or local public bodies and agencies.

Eligible Expenditures: For capital projects only.

Method of Allocation: Rail Modernization funds are distributed to urbanized areas with fixed-guideway systems in operation for at least seven years on a formula basis. New Start and Bus Capital funds are distributed by discretion of the Federal Transit Administration or may have amounts "earmarked" by Congress during the legislative process. Authorizing legislation designates 40% of the funds for New Starts, 40% for Rail Modernization, and 20% for Bus Capital.

Matching Ratio: 80% federal, 20% state and local.

Section 9 This program apportions operating and capital assistance on a formula basis to urbanized areas.

Status: Authorized through FY 1997.

Recipients of Funds: Directly to urbanized areas over 200,000 population, through state governors to urbanized areas under 200,000 population.

Eligible Expenditures: For operations or capital projects by local decision up to a specific amount called the "operating limit" or "operating cap." Any apportioned funds in excess of each urbanized area's operating limit may be used only for capital

projects. The operating limit is calculated separately from each area's apportionment and is a limit on the use of apportioned funds, it is not an apportionment of additional money.

Method of Allocation: By six formulas based on urbanized area population and mode of transit service. These formulas are:

(1) Fixed guideway operations in urbanized areas over 200,000 population, basic formula, 28.87% of Section 9. The formula is 60% fixed guideway revenue vehicle miles operated and 40% fixed guideway route miles. Urbanized areas over 750,000 population that have commuter rail operations receive a minimum of 0.75% of this formula.

(2) Fixed guideway operations in urbanized areas over 200,000 population, incentive formula, 1.32% of Section 9. The formula is the number of fixed guideway passenger miles traveled multiplied by the number of fixed guideway passenger miles traveled per dollar of operating cost. Urbanized areas over 750,000 population that have commuter railroad operations receive a minimum of 0.75% of this formula.

(3) Bus operations in urbanized areas over 1,000,000 population, basic formula, 40.31% of Section 9. The formula is 50% bus revenue vehicle miles operated, 25% urbanized area population, and 25% urbanized area population density weighted by population.

(4) Bus operations in urbanized areas from 200,000 to 1,000,000 population, basic formula, 14.61% of Section 9. The formula is 50% bus revenue vehicle miles operated, 25% urbanized area population, and 25% urbanized area population density weighted by population.

(5) Bus operations in urbanized areas over 200,000 population, incentive formula, 5.57% of Section 9. The formula is the number of bus passenger miles traveled multiplied by the number of bus passenger miles traveled per dollar of operating cost.

(6) Mass transportation operations in urbanized areas less than 200,000 population, 9.32% of Section 9. The formula is 50% urbanized area population and 50% urbanized area population density weighted by population.

Matching Ratios: Operating assistance: 50% federal, 50% state and local. Capital assistance: 80% federal, 20% state and local.

Section 16(b)2 Established by the Urban Mass Transportation Act of 1970 to assure the availability of mass transportation to elderly and disabled persons.

Status: Authorized through FY 1997.

Recipients of Funds: Private, non-profit corporations and associations providing mass transportation services for the elderly and disabled or public bodies coordinating such service or providing service where no non-profit service is available, through state governors.

Eligible Expenditures: For capital equipment, contracted service, and state administrative costs.

Method of Allocation: By formula. Funds are allocated to states based on population of elderly and disabled individuals with a fixed minimum amount for each state.

Matching Ratio: 80% federal, 20% state and local.

Section 18 Established by the Surface Transportation Assistance Act of 1978 to allocate funds for mass transportation in rural areas outside of urbanized areas.

Status: Authorized through FY 1997.

Recipients of Funds: Mass transportation providers outside of urbanized areas through state governors.

Eligible Expenditures: For operations or capital projects.

Method of Allocation: By formula. Authorized amount is 5.5% of total funds available for Sections 9 and 18. Formula is non-urbanized area population of each state.

Matching Ratio: Operating assistance: 50% federal, 50% state and local. Capital assistance: 80% federal, 20% state and local.

Section 18(h) Established by the Federal Mass Transportation Act of 1987 to carry out a rural transit assistance program in non-urbanized areas. Grants are available for research, technical assistance, training and related support services.

SECTION X

Glossary and Index

GENERAL DEFINITIONS

Transit System

An organization providing local or regional multiple-occupancy-vehicle passenger service. Organizations that provide service under contract to another agency are not counted as separate systems.

Multi-Mode Transit System

A system operating more than one mode of service.

Public Transit System

A system owned, controlled, or subsidized by any municipality, county, regional authority, state, or other governmental agency, including those operated or managed by a private management firm under contract to the government agency owner.

High-Occupancy Vehicle (HOV) Facility

Exclusive road or traffic lane limited to buses, vanpools, carpools, and emergency vehicles. Also called busways, transitways, or bus/carpool/commuter lanes.

Urbanized Area

A United States Bureau of the Census-designated area consisting of a central city of 50,000 inhabitants or more, or two adjacent cities constituting for general social and economic purposes a single community with a population of at least 50,000, plus surrounding closely settled territory, but excluding the rural portion of cities.

Urban Place

A U.S. Census Bureau-designated area consisting of incorporated political units or closely settled unincorporated areas outside an urbanized area.

MODE AND VEHICLE DEFINITIONS

Mode

Transit service operated in a particular format. There are two types: fixed-route and non-fixed-route.

Fixed-Route

Service provided on a repetitive, scheduled basis along a specific route with vehicles stopping to pick up and discharge passengers at specific locations. Modes include motorbus, trolleybus, jitney, vanpool, heavy rail, light rail, commuter rail, aerial tramway,

automated guideway, cable car, inclined plane, and ferryboat.

Non-Fixed-Route

Service not provided on a repetitive, scheduled basis along a specific route. Demand response is the only non-fixed-route mode.

Aerial Tramway

An electric system of aerial cables with suspended unpowered passenger vehicles propelled by separate cables attached to the vehicle suspension system and powered by engines or motors at a central location not on board the vehicle.

Automated Guideway

An electric railway operating without vehicle operators or other crewpersons on board the vehicle.

Cable Car

An electric railway operating in mixed street traffic with unpowered, individually-controlled transit vehicles propelled by moving cables located below the street surface and powered by engines or motors at a central location not on board the vehicle.

Commuter Rail

Railroad local and regional passenger train operations between a central city, its suburbs, and/or another central city. It may be either locomotive-hauled and self-propelled, and is characterized by multi-trip tickets, specific station-to-station fares, railroad employment practices, and usually only one or two stations in the central business district. Also known as "suburban rail."

Demand Response

Non-fixed-route service utilizing vans or buses with passengers boarding and alighting at pre-arranged times at any location within the system's service area.

Dial-a-Ride

Another name for "Demand Response."

Downtown People Mover

A type of automated guideway transit operating on a loop or shuttle route within the central business district of a city.

Ferryboat

A boat providing fixed-route service over water.

Heavy Rail

An electric railway with the capacity for a "heavy volume" of traffic and characterized by exclusive rights-of-way, multi-car trains, high speed and rapid acceleration, sophisticated signaling, and high platform loading. Also known as "subway," "elevated (railway)," or "metropolitan railway (metro)."

Inclined Plane

An electric railway operating over exclusive right-of-way on steep grades with unpowered vehicles propelled by moving cables attached to the vehicles and powered by engines or motors at a central location not on board the vehicle.

Light Rail

An electric railway with a "light volume" traffic capacity compared to "heavy rail." Light rail may use exclusive or shared rights-of-way, high or low platform loading, and multi-car trains or single cars. Also known as "streetcar," "trolley car," and "tramway".

Metropolitan Railway

Another name for "Heavy Rail."

Monorail

An electric railway in which a rail car or train of cars is suspended from or straddles a guideway formed by a single beam or rail. Most monorails are either heavy rail or automated guideway systems.

Motorbus

A rubber-tired, self-propelled, manually-steered vehicle with fuel supply carried on board the vehicle. Types include:

Advanced Design Bus: A bus introduced in 1977 that incorporates new styling and design features compared to previous buses.

Articulated Bus: A bus 55 feet or more in length with two connected passenger compartments that is able to bend at the connecting point when the bus turns a corner.

Double Deck Bus: A bus with two separate passenger compartments, one above the other.

Express Bus: A suburban or intercity bus that operates a portion of the route without stops or with a limited number of stops.

Intercity Bus: A bus with front doors only, high-backed seats, separate luggage compartments, and usually with restroom facilities for use in high-speed long-distance service.

Medium Size Bus: A bus from 29 to 34 feet in length.

New Look Bus: A bus with the predominant styling and mechanical equipment common to buses manufactured between 1959 and 1978.

Sightseeing Bus: A bus adapted for sightseeing use, usually with expanded window areas.

Small Bus: A bus 28 feet or less in length.

Standard-Size Bus: A bus from 35 to 41 feet in length.

Suburban Bus: A bus with front doors only, normally with high-backed seats, and without luggage compartments or restroom facilities for use in longer-distance service with relatively few stops.

Transit Bus: A bus with front and center doors, normally with a rear-mounted diesel engine, low-back seating, and without luggage compartments or restroom facilities for use in frequent-stop service.

Van: A 20-foot long or shorter vehicle, usually with an automotive-type engine and limited seating normally entered directly through side or rear doors rather than from a central aisle, used for demand response, vanpool, and lightly patronized motorbus service.

Paratransit Service

All transit service other than traditional fixed-route service. Normally, it means demand response, but it is often used for subscription motorbus, vanpool, and other special services.

Rapid Rail

Another name for "Heavy Rail."

Rapid Transit

Rail or motorbus transit service operating over completely grade-separated exclusive right-of-way.

Special Service

Another name for "Paratransit Service."

Streetcar

Another name for "Light Rail."

Tramway

Another name for "Light Rail."

Trolley Car

Another name for "Light Rail."

Trolleybus

An electric rubber-tired transit vehicle, manually steered, propelled by a motor drawing current from a central power source not on board the vehicle through overhead wires.

Urban Ferryboat

A ferryboat with one or more terminals within an urbanized area, excluding international and urban park ferries.

Vanpool

A transit service in which passengers share a van with one passenger designated "driver." The route is "fixed," but varies as passengers change.

Transit Passenger Vehicle

A vehicle used to carry passengers in transit service.

Active Vehicle

Transit passenger vehicles licensed, where required, and maintained for regular use, including spares and vehicles out of service for maintenance purposes, but excluding vehicles in "dead" storage, leased to other operators, in energy contingency reserve status, permanently not usable for transit service, and new vehicles not yet outfitted for active service.

Rehabilitation

Major rebuilding or repair of a transit passenger vehicle for the purpose of preserving its useful service life.

Wheelchair Accessible Vehicle

A vehicle that a wheelchair-bound person may enter either 1) via an on-board retractable lift or ramp, 2) directly from a station platform reached by an elevator or a ramp that is either level with the vehicle floor or can be raised to floor level.

EXPENSE DEFINITIONS**Vehicle Operations**

Expense for labor, materials, fees, and rents required for operating transit vehicles and passenger stations including all fuels for vehicle propulsion except electric propulsion power.

Vehicle Maintenance

Expense of labor, materials, services, and equipment used to repair and to service transit vehicles and service vehicles.

Non-Vehicle Maintenance

Expense of labor, materials, services, and equipment used to repair and service way and structures, vehicle movement control systems, fare collection equipment, communication systems, buildings and grounds, and equipment other than vehicles including expense of electric propulsion power for transit vehicles.

General Administration

Expense of labor, materials, and fees associated with general office functions, insurance, safety, legal services, and customer services.

Purchased Transportation

Expense of labor, materials, and fees paid to companies or organizations providing transit service under contract.

Total Operating Expense

The sum of "Vehicle Operations," "Vehicle Maintenance," "Non-Vehicle Maintenance," "General Administration," and "Purchased Transportation."

Depreciation and Amortization

Decline in value of transit system assets incurred through use of tangible property (depreciation) and intangible property (amortization). Because property is depreciated or amortized on a formula basis over several years, the amount recorded as depreciation or amortization normally does not represent the actual money spent for property in any specific time period.

Many public transit systems receive financial assistance for the purchase of property (capital assistance). Although the property purchased with capital assistance might be depreciated or amortized and thus reported as an "expense" in this book, any financial assistance received for the purchase of property is not included in "revenue" or "operating assistance" amounts.

Other Reconciling Items

All other expenses in addition to "Total Operating Expense" and "Depreciation and Amortization" including interest expenses and leases and rentals.

Total Expense

The sum of "Total Operating Expense," "Depreciation and Amortization," and "Other Reconciling Items."

Salaries and Wages

Pay and monetary allowances, including overtime, to employees for performance of their work.

Fringe Benefits

Pay or accruals to or on behalf of employees not for performance of their work, including sick pay, holiday pay, vacation pay, pension plans, life insurance, health insurance, unemployment insurance, social security, workmen's compensation, and other allowances.

Total Labor Costs

Sum of "Salaries and Wages" and "Fringe Benefit Costs."

Services

Labor or other work provided by outside organizations for a fee.

Fuel and Lubricants

Gasoline, diesel, other fuels, and vehicle lubricants.

Other Materials and Supplies

Materials and supplies other than "Fuel and Lubricants."

Utilities

Utilities including electric, gas, water, and telephone service, and propulsion power for electric vehicles.

Casualty and Liability

Protection of transit system from loss through insurance programs or for compensation of others for losses due to acts for which the transit system is liable.

Purchased Transportation

Expense of labor, materials, and fees paid to companies or organizations providing transit service under contract.

Other

Taxes, expense transfers, and miscellaneous expenses.

REVENUE DEFINITIONS**Operating Assistance**

Financial assistance for transit operations (not capital expenditures). Such aid may originate with federal, local, or state governments.

Other Operating Revenue

Revenue derived from (1) organizations paying money in lieu of passenger fares, and charter, school bus, and freight service; (2) transit-related services such as station and vehicle concessions and advertising; and (3) non-transit-related services, such as rental of vehicles and properties, investment income, and non-park-and-ride parking revenue.

Passenger Revenue

Money, including fares and transfer, zone, and park-and-ride parking charges, paid by transit passengers; also known as "farebox revenue." Prior to 1984, data does not include fare revenues collected by contractors operating transit service.

Adult Base Fare

Basic fare paid by one person for one transit ride; excludes transfer charges, zone charges, express service charges, peak period surcharges, and reduced fares.

Average Fare per Unlinked Passenger Trip

"Passenger Revenue" divided by "Unlinked Passenger Trips."

Peak Period Surcharge

An extra fee required during peak periods (rush hours).

Transfer Charge

An extra fee charged for a transfer to use when boarding another transit vehicle to continue a trip.

Zone Charge

An extra fee charged for crossing a predetermined boundary.

RIDERSHIP AND EMPLOYMENT DEFINITIONS

Capital Employee

An employee involved with construction or capital procurement and who has no involvement with operation of the transit system.

Operating Employee

An employee involved with operation, maintenance, or administration of the transit system, excluding those involved in construction and capital procurement.

Passenger Miles

The number of miles traveled by passengers determined by multiplying the number of unlinked passenger trips times the average length of their trips.

Revenue Passenger Trips

The number of fare-paying transit passengers with each person counted once per trip; excludes transfer and non-revenue trips.

Single-Vehicle Transit Trip

A trip in which a person uses only one vehicle.

Total Motorbus Mile Equivalents

The number of vehicle miles that would have been operated by a transit mode if the service had been provided by motorbuses. Based on average seating plus standing capacity of the vehicle as compared to the capacity (70 people) of a standard-size motorbus.

Total Passenger Trips

Sum of all single-vehicle transit trips by (1) initial-board (first-ride) revenue passengers, (2) transfer passengers on second and successive rides, and (3) non-revenue passengers entitled to transportation without charge.

Unlinked Passenger Trips

The number of transit vehicle boardings, including charter and special trips. Each passenger is counted each time that person boards a vehicle.

Vehicle Miles Operated

Sum of all miles operated by passenger vehicles, including mileage when no passengers are carried. When vehicles are operated in trains, each vehicle is counted separately--e.g., an eight-vehicle train operating for one mile equals eight vehicle miles.
